## NOTES.

1.—The 61 deaths from *small pox* occurred at the following ages—seventeen under 1 year; thirteen 1-3; thirteen 3-5; nine 5-10; three 10-15; five 20-30; and one 39 years.

2.—Under *small pox* is included 1 case of chicken pox, a male 2 years. Under *tumor*, “fatty tumor on the head and face—4 years’ duration,” a female 71 years. Under *atrophy*, 3 cases of want of breastmilk, a male 1 month, and 2 females, respectively 10 days and 15 days. Under *malformation*, “fits—imperfect closure of foramen ovale,” a male 11 months; and “inanition from defective palate,” a male 11 months. And under *gastritis*, “pharyngitis,” a female 68 years. The ages of 3 males and 4 females, who died at 90 years and upwards, were as follow—three 90 years; two 91; and two 93 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Accidental from a fall down stairs,” a male 50.
- (2) “Broken neck by an accidental fall from a scaffold, (18 hours)” a male 48.
- (3) “Injury of the spine from an accidental fall,” a male 40.
- (4) “Fracture of the right leg from an accidental fall,” a male 45.
- (5) “Erysipelas in the scalp, by a wound in the head from an accidental fall,” a male 73.
- (6) “Accidental death by falling from a scaffold fifty feet in height—arms, legs, and thighs broken,” a male 27.
- (7) “Injury to the brain by an accidental fall from a window,” a male 2.
- (8) “Found dead, in a ship’s hold, supposed from a fall,” a male, age unknown.
- (9) “Fracture of his skull by a fall,” a male 22.
- (10) “Injuries caused by falling from a plank,” a male 24.
- (11) “Compound fracture of the leg by an accidental fall from a wall,” a male 49.
- (12) “Accidental from a fall down stairs,” a female 38.
- (13) “Accidentally fell down stairs in a state of intoxication,” a female 65.
- (14) “Accidental from two logs of timber having fallen upon him—ruptured bladder, 5 days” (*p. mort.*) a male 38.
- (15) “Accidentally run over and crushed by a cab,” a female 1.
- (16) “Injuries caused by a fall from a horse,” a male 14.
- (17) “Accidental fracture, and dislocated legs between spokes of the wheel of a dray—36 days” (*p. mort.*), a male 40.
- (18) “Accidentally run over by a waggon drawn by two horses,” a male 27.
- (19) “Accidental death—thrown from a cart,” a male 32.
- (20) “Accidentally killed by a fall from a spring-cart,” a male 40.
- (21) “Accidentally run over by a dray,” a male 47.
- (22) “Exhaustion caused by an accidental fracture of the right thigh-bone,” a female 87.
- (23) “Natural death, accelerated by an accidental injury in coal-whipping,” a male 30.
- (24) “Accidental bursting of the fire-box of an engine,” a male 19.
- (25) “Injuries accidentally caused in a house on fire,” 3 males, aged respectively 19, 30, 32.
- (26) “Dislocation of the neck by an accident,” a male 19.

### WOUNDS:—

- (29) “Mortification from a small accidental cut in the thumb (10 days),” a male 35.
- (30) “Cutting his throat in temporary insanity,” a male 64.
- (31) “Suicide when insane, by cutting her throat,” a female 62.

- (32) “Decayed leg, from the effects of a wound received at the battle of Waterloo,” a male 53.

### DROWNING:—

- (33) “Suicide, when insane, by drowning,” a male 40.
- (34) “Drowned in bathing,” a male 27.
- (35) “Found in the River Thames,” a male about 40.
- (36) “Found drowned,” a male 60.
- (37) “Drowning,” a male 16.
- (38) “Drowning,” a male 29.

### HANGING and SUFFOCATION:—

- (39) “Hanged himself, being at the time insane,” a male 53.
- (40) “Suicide in temporary insanity—hanging,” a female 46.
- (41) “Accidentally suffocated,” a male 1.
- (42) “Accidentally suffocated,” a female 1.

### BURNS and SCALDS:—

- (43) “Accidentally burnt by her clothes taking fire,” a female 6.
- (44) “Accidentally burnt by her clothes taking fire,” a female 7.
- (45) “Burns from her clothes accidentally taking fire,” a female 6.
- (46) “Accidentally burnt by her clothes taking fire,” a female 30.
- (47) “Exhaustion, and sloughing from a burn; clothes caught fire on 7th December,” a female 4.
- (48) “Burnt by his clothes accidentally taking fire,” a male 3.
- (49) “Injuries from the clothes accidentally taking fire,” a male 75.
- (50) “Accidentally burnt from her clothes taking fire—21 hours,” a female 8.
- (51) “Accidental death from burns,” a female 7.
- (52) “Accidental burn,” a female 8.
- (53) “Accidentally burnt,” a female 29.
- (54) “Accidental from burns,” a male 2.
- (55) “Accidental death from burns,” a female 77.
- (56) “Accidentally burnt,” a male 15.
- (57) “Accidental from burns,” a female 6.
- (58) “Accidental from burns,” a female 6.
- (59) “Accidental from burns,” a female 11.
- (60) “Accidental scald,” a male 3.
- (61) “Mortification of the back of the neck, caused by having been burnt 31 days previously,” a female 6.
- (62) “Accidental from scalds,” a female 3.

### POISON:—

- (63) “Found dead from Prussic acid, how administered unknown,” a male 21.
- (64) “Found dead from Prussic acid, how administered unknown,” a female 27.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, January 4, 1845.*

[illegible]

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The reading of the barometer are considered to be coincident with those of the topographical aneroid barometer. The amount of clouds is estimated, considering a clear sky as 0; a few clouds, 1 or 2; a moderate quantity, 3 or 4; and a very thick overcast, 5. A number of fathoms of water were observed at low tide.

The observations are taken every two hours, day and night with the exception of Sundays.

The readings of the two registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

There are, however, placed here indications of the civil day which precede that on which the thermometers are read.

These self-recording thermometers, from the introduction of which the estimation of horizontal movement is made is read at 10 a.m., and the result given in the 12 hours preceding the next day which precedes that on which the thermometer is read.

A complete set of the observations furnished by Mr. Henry James, who was employed by the Admiralty during the observations made at this observance is the margin of page 67 and 68.

ANNUAL SERIES.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Paneras; Kensington; Fulham; Hammersmith; St. Luke; Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 50 deaths from small pox occurred at the following ages:—eight under 1 year; ten 1-3; eight 3-5; seven 5-10; two 10-20; eight 20-30; four 30-40; and the remainder respectively 40, 42, and 49 years.

3.—Under erysipelas is included "erysipelas—excision of a small fatty tumor in the shoulder on 26th November—erysipelas commenced on the 7th December," a female 32 years. Under mortification, "sloughing sore from a blister (14 days)," a male 9 months. Under malformation, "malformation of the palate—inability to swallow," a male 3 days. Under laryngitis, "laryngismus stridulus," a male 5 months. Under stricture of the intestinal canal, "stricture of the rectum," a female 52 years. Under disease of the stomach, "tympantites," a male 3 months. Under disease of the joints, bones, &c., "caries of the spine," a male 18 years; and "necrosis of the ear terminating in hæmorrhage," a female 1 year. Under disease of the skin, "lepra," a male 6 weeks. And under disease of the kidneys, "granular disease of the kidneys," a male 42 years; and "albuminorrhæa," a male 30 years. Three persons, aged respectively 3, 7, and 15 years, and belonging to the same family, died of scarlatina, and are included in the present table; and a fourth is reported to have died on the evening of the 11th, of the same disease, whose death had not yet been registered. The ages of 5 persons, who died above 90 years of age, are as follow:—2 males 93 and 102 years; and 3 females 92, 93, and 100 years and 7 months. The former centenarian died at Brompton; the latter in Haggerstone West, Shoreditch.

4.—The following are the cases of death by violence which appear in the present table:—

FRACTURES and CONTUSIONS:—	BURNS:—
(1) "Accidentally run over by a cart drawn by one horse," a male 16.	(7) "Died from bodily injuries by his clothing taking fire accidentally (9 hours)," a male 5.
(2) "Irritation and exhaustion consequent on a fracture of the arm, by a fall from a railway carriage in motion," a male 25.	(8) "Accidentally burnt by her clothes taking fire," a female 6.
WOUNDS:—	POISON:—
(3) "Suicide—insanity—cut throat," a female 45.	(9) "Poisoning with arsenic, and exposure to that substance during work at a candle manufactory," a male 22.
(4) "Erysipelas of the right hand and fore-arm, from a slight cut in the back of the hand," a male 46.	(10) "Died from taking opium, but in what state of mind has not appeared to the jury," a male 19.
DROWNING:—	MEANS NOT SPECIFIED:—
(5) "Drowned, by what means the jury have no legal proof," a male 19.	(11) "Wilfully murdered by some person or persons unknown," a female newly born.
SUFFOCATION:—	
(6)* "Accidental death from suffocation and strangulation in machinery," a male 18.	

\* No. 6.—The kind of machinery should have been stated.

General Register Office, Tuesday, January 14th, 1845.

*During the Week ending Saturday, January 11, 1843.*

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke; Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Stratham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 54 deaths from small pox occurred at the following ages:—nine under 1 year; eighteen 1-3; twelve 3-5; seven 5-10; six 15-30; and two 30-40 years.

3.—Under typhus (for the sake of convenience) is included 1 case of "mumps," a male 1 year. Under atrophy, "inability to take sufficient sustenance," a female 7 days. Under disease of nerves, senses, &c., anaesthesia, a female 25 years. Under phthisis, "laryngeal phthisis, with chronic bronchitis after 6 years' illness," a female 54 years. Under disease of the respiratory organs, "ulceration of the larynx," a female 50 years. Under hæmatemesis, "melæna (9 days' duration)," a female 56 years. Under stone, "fever consequent on operation for stone," a male 68 years. Under stricture of the urethra, "stricture and fistula in perinæo," a male 54 years. And under intemperance, "congestion of the brain from exposure to cold during intoxication," a female 22 years. The following are the ages of 3 males who died above 90 years of age—90, 92, and 94 years. A female is also included in this return who died in Kennington at the age of 105 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) "Inadvertently killed by a blow, while fighting," a male 22.
- (2) "Found dead in the Regent's Canal, with marks of violence," a male 44.
- (3)\* "Fever produced by a hurt in the groin," a male 13.
- (4) "Injuries of the thorax received during birth," a male 2 days.

### WOUND:—

- (5) "Suicide—cut his throat with a razor, being at the time of unsound mind," a male 58.

### DROWNING:—

- (6) "Accidentally drowned in a pond, by ice giving way," a male 10.
- (7) "Drowned, by what means he came into the water is unknown," a male 74.
- (8)\* "Drowning," a male 12.

### MEANS NOT STATED:—

- (9)\* "Wilful murder by some person unknown," a female newly born.

\* Nos. 3, 8, and 9, are imperfect returns. In 3 and 9 the nature of the injury should have been stated, or the means by which it was produced; and in 8 it should have been stated either how the person came into the water, or that the jury had no means of ascertaining.

General Register Office, Tuesday, January 21st, 1845.

The height of the column of the barometer is considered to be the mean level of the sea. The readings of the barometer are considered to be coincident with those of the thermometer, and when partially cloudy, considering a few clouds, the observations are taken every four hours, day and night with the exception of Sundays. The readings of the two self-registering thermometers, the one in the full rays of the sun, and the other placed on a glass fully exposed to the sky, are taken every morning at 6 o'clock, and at 6h. 30m. a.m. The mean of these two readings is the mean of the two, and the result given is for the thermometer in the sun, which precedes that on which the anemometer is read.

The observations made at this Observatory, from the observations made at this

## NOTES.

1.—Under the term METROPOLIS, are comprised the 31 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Finsbury; Hammersmith; St. Luke; Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Bittersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 37 deaths by small pox occurred at the following ages:—eight under 1 year; ten 1-3; five 3-5; five 5-10; two 10-15; three 15-20; and four 20-30 years.

3.—Under atrophy are included, 2 cases of want of breast-milk, males, aged respectively 9 weeks, and 4 months. Under disease of the brain, &c., "disease of the spinal marrow," a male 70 years. Under pneumonia, "natural death from inflammation of the lungs, which may have been aggravated by eating a piece of candle," (inquest) a male 2 years. Under worms, "infantile fever," a female 4 years. A d under disease of the kidneys, "Bright's disease of the kidneys" a male 55 years; "granular disease of the kidneys," a male 32 years; and "granular disease of the kidneys—dropsy," a female 55 years. A male died at the age of 96 years, and five females at 90, 91, 93, 93, and 94 years respectively.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1)\* "Abscess resulting from a fall 18 months ago," a male 7.
- (2)\* "Injury to his spine by a fall," a male 20.
- (3) "Injury of the spine from an accidental fall down stairs while intoxicated," a male 41.
- (4) "Sloughing ulcer of the leg from a shutter falling on the foot," a male 57.
- (5)\* "Accidental injury to his right leg," a male 65.
- (6)\* "Injury of the thigh," a male 52.

### WOUND:—

- (7) "An accidental cut through the skull, and deeply into the brain, by a circular saw in a saw-mill," a male 26.

### DROWNING:—

- (8) "Found dead in the River Thames, without marks of violence—drowned, the jury have no evidence to prove by what means," a male 20.

- (9) "Found dead, apparently drowned," a male 69.

### HANGING and SUFFOCATION:—

- (10) "Suicide by hanging—temporary insanity," a male 22.
- (11) "Suffocated accidentally in the bed clothes," a female 11 weeks.

### BURNS:—

- (12) "Burns from her clothes accidentally taking fire (29 hours)" a female 11.
- (13) "Burns received by his clothes accidentally taking fire (12 days)" a male 1.
- (14) "Burns received by her clothes accidentally taking fire (died immediately)" a female 69.
- (15)\* "Natural death, but which may have been accelerated by a burn," a male 36.

### MEANS NOT STATED:—

- (16)\* "Manslaughter against Isaac Harmon," a female 30.

\* No. 16 is an imperfect return: it should have stated the means by which death was caused. In Nos. 5 and 6 the nature of the injuries should have been described. In Nos. 1 and 2 the place and other circumstances of the fall ought to have been included in the returns. And in No. 15 it should have been stated by what means the burn was caused.

It has been since ascertained that the cause of death in a female aged 21 years, reported last week as "peritoneal inflammation," should have been registered, "peritoneal inflammation in childbirth." A case of uterine hemorrhage should also have been registered, "uterine hemorrhage in childbirth."

General Register Office, Tuesday, January 28th, 1845.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, January 25, 1845.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 1, and a night sky by 2. The readings of the thermometers are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. Whewell's anemometer (from the indications of which the exact horizontal movement is made) is read at 9 a.m., and the result given is for the 24 hours preceding that at which the observation is made. The observations for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the Tall column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average. The temperature of the water of the Thames is recorded at the Royal Observatory, and the readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading at 7h. 30m. a.m., was 32.9; and the mean reading at 7h. 30m. p.m., was 41.2. The mean readings at the Observatory for the same times were 36.5 and 40.4, respectively.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 42 deaths from small pox occurred at the following ages:—eight under 1 year; eleven 1-3; two 3-5; eight 5-10; four 10-20; six 20-30; two 30-40; and one 41 years.

3.—Under diarrhœa is included, “diarrhœa and atrophy—want of breast-milk,” a male 1 year. Under atrophy, 2 cases of “convulsions and want of breast-milk,” males aged respectively 5 days, and 14 weeks; and “atrophy—inability to take sufficient sustenance,” a male 61 years. Under malformation, “spina bifida,” a male 12 days; and “imperforate anus,” a female 4 months. Under epilepsy, “hysteria,” a female 33 years. Under pleurisy, “empyema (1 year),” a female 41 years. And under disease of the joints, bones, &c., “necrosis of the bones of the head,” a male 43 years. Two males and 11 females died at the following advanced ages:—two at 90 years; two at 91; three at 92; three at 93; one at 94; and two at 97 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Injuries to the head by a fall from an omnibus,” a male 44.
- (2) “The kick of a horse,” a male 36.
- (3) “Accidental crushing of the head against a wall, by the running away of a horse with a cart,” a male about 50.
- (4) “Delirium tremens—injury to his leg by being run over by a cart,” a male 26.
- (5) “Accidentally killed by the wheels of a waggon passing on his body,” a male 16.
- (6) “Fracture of her skull—accidentally run over by a cart,” a female 48.
- (7)\* “Accidental fracture of his left thigh by a fall,” a male 20.
- (8) “Compression of the spinal cord by falling accidentally from the floor of a building,” a male 60.
- (9)\* “Fall and fracture of the collar-bone,” a female 60.
- (10) “Accidental death from a fall down stairs (5 hours p. mort.),” a female 18.
- (11) “Wilful murder against some person or persons unknown, by contusion on the head, with rupture of blood-vessels of the brain from blows,” a female newly born.
- (12) “Fever induced by injury of the foot from a tight boot (10 days),” a male 63.
- (13)\* “Injury of the spine,” a female 41.

### DROWNING:—

- (14) “Accidentally drowned whilst sliding on ice,” a male 10.
- (15) “Accidentally drowned in the Surrey canal whilst bathing,” a male 21.

- (16) “Drowned himself in a water-butt, in a temporary state of insanity,” a male 33.
- (17) “Drowued—no proof by what means,” a male about 23.
- (18) “Drowning—how he came into the water, unknown,” a male 64.
- (19) “Found dead—apparently drowned,” a male 45.

### HANGING and SUFFOCATION:—

- (20) “Suicide by hanging in temporary insanity,” a male 57.
- (21)\* “Asphyxia,” a male 14.

### BURNS and SCALDS:—

- (22) “Accidentally burnt by her clothes taking fire,” a female 35.
- (23) “Accidentally burnt by her clothes taking fire,” a female 7.
- (24) “Accidentally burnt by his clothes taking fire (20 hours),” a male 8.
- (25) “Accidentally burnt by his clothes taking fire,” a male 4.
- (26) “Accidentally burnt by his clothes taking fire,” a male 6.
- (27) “Accidentally burnt by her clothes taking fire,” a female 4.
- (28) “Accidentally burnt by her clothes taking fire,” a female 4.
- (29)\* “Accidental scald,” a female 3.
- (30)\* “Accidentally scalded 6 weeks and 3 days before the day of her death,” a female 2.

### POISON:—

- (31) “Taking laudanum in temporary insanity,” a male 39.

\* No. 21 is obviously a defective return. By what means was the asphyxia produced? In No. 13 the cause of the injury should have been described. Nos. 29 30.—It should have been stated how the scalds were caused. In Nos. 7 and 9 the place and other circumstances of the falls should have been included in the returns.

General Register Office, Tuesday, February 4th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, February 1st, 1845.*

[illegible]

The height of the station of the barometer is considered to be at least above the mean level of the sea. The reading of the barometer is considered to be coincident with those of the Royal Society's first standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 1, and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds. The readings of the two self-regulating thermometers, the one placed in the full rays of the sun, and the other placed on a well-shaded surface, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. The readings of the two aneroid barometers are taken at the same time, and the difference of the two readings is noted. When the wind is observed to be blowing from the north, the indications of the station of horizontal movement is noted as read at 10 a.m., and the result is given in the column headed "North". When the wind is blowing from the south, the indications of the station of horizontal movement is noted as read at 10 a.m., and the result is given in the column headed "South". It is placed here *opposite to the civil day which precedes that on which the anemometer is read*. The average temperature for 25 days is given, as furnished by Mr. Fawcett, Assistant at the Royal Observatory, from observations made at his observance.

ANNUAL SERIES.  
VI.

1845.--No. 6.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Paneras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 33 deaths from small-pox occurred at the following ages:—eight under 1 year; five 1-3; five 3-5; seven 5-10; one 16; and seven 20-30 years.

3.—Under small-pox is included, "phagedænic ulcer of the cheek after small-pox," a female 6 years. Under atrophy, "atrophy—want of breast-milk," a male 1 year. Under disease of the brain, nerves, senses, &c., "abscess of the ear—convulsions," a female 5 weeks. Under quinsey, "diphtheria," a male 2 years. Under disease of the respiratory organs, "asphyxia from obesity," a female 53 years. Under enteritis, "natural death caused by over-exertion producing inflammation of the intestines, and effusion of serum," (inquest) a male 25 years. Under colic, "constipation of the bowels produced by the pressure of a tumour 5½ lbs. in weight," (post. mort.) a female 52 years. And under privation, "apoplexy accelerated by want of food," (inquest) a male 34 years. A male died at the advanced age of 91 years; and three females respectively at 91, 96 and 97 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) "Erysipelas of the head from an accidental fall over a load of turf," a male 62.
- (2)\* "Inflammation and gangrene of the small intestines by an accidental fall," a male 58.
- (3) "Accidental fall from the top of a house," a male 57.
- (4) "Suicide by throwing herself over the banisters of a flight of stairs while insane," a female 42.
- (5) "Laceration of the lungs, and other bodily injuries, from throwing herself off Waterloo-bridge in temporary insanity resulting from poverty and drink," a female 20.
- (6) "Accidental from a fractured skull caused by the fall of a bag of sugar," a male 25.
- (7) "Accidental from a compound fracture of the left leg, being run over by an omnibus," a female 66.
- (8) "Accidentally run over by a cart," a male 13.
- (9)\* "Accidental by a blow on his thigh from a wheel," a male 40.
- (10) "Accidental breaking of a washing machine," a female 41.

### WOUNDS:—

- (11) "Wilful murder against James Tapping, by shooting her with a pistol," a female 21.
- (12) "Cut his throat in a state of temporary insanity," a male 63.
- (13) "Mortal cut in the throat by her husband, who was in a state of temporary insanity," a female 52.
- (14) "Suicide by cutting his throat," a male 62.

\* Nos. 23-31 are imperfect returns: they contain no information of the means by which the burns were caused. By the clothes taking fire, or by what other accident? In No. 9 should have been indicated the description of wheel, e. g. the wheel of a van. No. 2 should have stated the place and other circumstance in which the fall occurred.

### DROWNING:—

- (15) "Accidentally drowned," a male 30.
- (16) "Accidental death from drowning," a male 17.
- (17) "Drowned—by what means he came into the water there is no proof," a male about 25.

### HANGING and SUFFOCATION:—

- (18) "Hanged himself in a state of temporary insanity," a male 60.
- (19) "Hanged himself—insane," a male 74.
- (20) "Found dead in bed with marks of pressure," a female 5 weeks.

### BURNS and SCALDS:—

- (21) "Accidental death from his clothes catching fire (29 hours)," a male 3.
- (22) "Burns from her clothes accidentally taking fire (instantly)," a female 58.
- (23)\* "Accidental from burns," a female 3.
- (24)\* "Accidental from burns," a female 4.
- (25)\* "Accidental from burns," a female 9 months.
- (26)\* "Accidental from burns," a female 1.
- (27)\* "Accidental death from burns," a female 73.
- (28)\* "Accidental burn," a female 80.
- (29)\* "Accidental from burns," a male 4.
- (30)\* "Accidental from burns," a male 5.
- (31)\* "Accidental from burns," a female 7.
- (32) "Scalded by drinking from a kettle (11 hours)," a male 2.

General Register Office, Tuesday, February 11th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, February 8th, 1845.*

[illegible]

The height of the column of the barometer is considered to be 13 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m. and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. However, the thermometers are placed in such positions that the temperature is not affected by the sun's rays at 10 a.m., and the result is given in the column headed "Temperature of the air." The estimation of humidity is made from the readings of the two thermometers, and is given in the 24 hours preceding. It is placed here opposite to the entry day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry Aspinwall at the Royal Observatory, from the observations made at his

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, February 15th.*

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London *within and without the Walls*, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 33 deaths from *small-pox* occurred at the following ages:—five under 1 year; eight 1-3; seven 3-5; seven 5-10; one 14; four 20-30; and one 39 years.

3.—Under *atrophy* is included “atrophy—want of breastmilk,” a female under 1 year. Under *cephalitis*, “inflammation of the car and brain,” a female 11 years. Under *pericarditis*, “morbus cordis—hypertrophy, 22 oz. in weight—pericarditis—endocarditis,” a male 32 years. Under *disease of the heart*, “angina pectoris,” a male 76 years. Under *colic*, “convulsions from the poison of lead, caused by working in the white-lead works at Battersea,” a male 26 years. Under *disease of the digestive organs*, “haemorrhoids,” a male 44 years. Under *disease of the liver*, “cirrhosis,” a male 47 years. Under *disease of the kidneys*, “albuminuria (5 years)—anasarca—morbus cordis,” a male 80 years; “granular kidneys,” 2 males respectively 27 and 54 years; and “extravasation of urine,” a male 40 years. Under *disease of the joints, bones, &c.*, “caries,” a male 29 years. Under *disease of the skin*, “pneumonia and eczema,” a male 2 months. And under *privation*, “natural death—pneumonia accelerated by exposure to the cold, and privation (inquest),” a male 40 years; and “natural death accelerated by want and privation (inquest),” a female 76 years. Both cases of *privation* occurred in Spitalfields. Two males died at 90, and 91 years; one female at 90; two at 95; and one at the advanced age of 100 years.

4.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Bodily injuries received by the wheel of a cart passing over his body accidentally,” a male 24.
- (2) “Accidental death by fractured ribs caused by a fall from some steps,” a female 77.
- (3)\* “Disease of the head occasioned by a fracture,” a male 47.
- WOUNDS:—
- (4) “Cutting her throat in temporary insanity,” a female 55.
- (5) “Suicide by cutting his throat with a razor,” a male 36.
- (6) “Inflammation of the brain caused by a lacerated wound on his thumb, but how produced unknown,” a male 51.

### DROWNING:—

- (7) “Found dead—apparently drowned without marks,” a male 60.

- (8)\* “Found drowned,” a male 17.

### BURNS:—

- (9) “Accidentally burnt by her clothes taking fire (29 hours)” a female 6.
- (10) “Accidental death from her clothes taking fire (16 hours),” a female 40.
- (11) “Burns received from her clothes accidentally taking fire (1 month)” a female 6.

### POISON:—

- (12) “Poisoned himself with laudanum, being at the time insane,” a male 50.
- (13) “Suicide by taking prussic acid in a temporary state of insanity,” a male 36.
- (14)\* “Wilfully murdered,” a female newly born.

\* Nos. 3, 8, and 14 are imperfect returns. In 3 it should have been stated *by what means* the fracture was caused; and in 8 *how* the person came into the water, or that the fact could not be ascertained. In No. 14 should have been stated the means which had apparently been employed in putting the child to death.

General Register Office, Tuesday, February 18th, 1845.

*During the Week ending Saturday, February 15th, 1845.*

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated according to the following scale: 0 = clear sky; 1 = light clouds; 2 = moderate clouds; 3 = heavy clouds; 4 = overcast sky; 5 = estimated the whole sky covered with cloud. The observations are taken every two hours, except on Sundays.

The reading of the two self-registering thermometers, the one placed in the open air and the other in the shade, is taken at intervals of five minutes, fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whenell's aneroidometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the result given for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroidometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer suspended from the side of Blackheath, the other station at nearly the S.S.W. extremity.

the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 30 deaths from small-pox occurred at the following ages:—nine under 1 year; four 1-3; two 3-5; six 5-10; three 15-20; five 20-30; and one 50 years.

3.—Under small-pox are included, “chicken-pox (ill 3 weeks)” a male 11 weeks; and “swine-pox and pneumonia,” a female 6 months. Under atrophy, “want of breast-milk,” a female 3 months. Under malformation, “imperforate anus,” a male 23 hours, and a female 4 days. Under disease of the liver, “nutmeg disease of the liver,” (post mortem) a female 37 years. Under disease of the kidneys, “Bright’s disease of the kidneys,” a male 55 years; and “granular disease of the kidneys,” a female 35 years. And under disease of the uterus, “ovarian tumour weighing 22 lbs,” (post mortem) a female 23 years. Of persons above 90 years, one male died at 92, and two at 95; one female at 91, one at 93, and two at 94 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Natural death accelerated by a fall from intoxication,” a male 59.
- (2) “Injuries received to the skull by an accidental fall from the mast-head of a brig,” a male 16.
- (3)\* “Fractured thigh,” a male 67.
- (4)\* “Fractured rib and distressing cough,” a male 73.
- (5)\* “Stoppage in the bowels, following a blow in the abdomen, 18 months since,” a male 44.

### DROWNING:—

- (6) “Drowning—found in the River Thames, off Woolwich,” a female 23.
- (7) “Drowned—no evidence from what cause,” a male 22.

- (8) “Drowned—no evidence from what cause,” a male 16.
- (9) “Drowned in the canal, whether by accident or intention is not known,” age unknown, (Shoreditch).
- (10) “Natural death accelerated by an accidental fall into the water,” a male 75.

### BURNS and SCALDS:—

- (11) “Effects of a burn by the clothes taking fire,” a male 2.
- (12)\* “Accidental burn,” a female 5.
- (13)\* “Effects of burns,” a male 5.
- (14)\* “Inflammation from being burnt,” a male 6.
- (15)\* “Accidental scald of the front of the chest,” a male 1.

\* Nos. 3, 4 and 5 are defective returns; for they do not include the means by which the fractures and blow were caused. The returns of burns (with the exception of No. 11) and that of a case of scalding, are imperfect. Were the burns caused by the clothes taking fire, or by what other means?

General Register Office, Tuesday, February 25th, 1845.

The height of the column of the barometer is considered to be 129 feet above the mean level of the sea. The readings of the barometer are considered to be independent of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering the sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

In reading the 12th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is, ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

\* This time was inadvertently printed 2h. 30m., and after the second time 7h. 30m. the letters p.m., were omitted, in the week ending Saturday, February 13th.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penze); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,101.

2.—The 24 deaths from small-pox occurred at the following ages:—six under 1 year; five 1-3; two 3-5; two 5-10; six 15-30; two 30-40; and one 45 years.

3.—Under purpura is included "scorbutic eruption," a male 3 months. Under cancer, "medullary sarcoma of the right leg—amputation," a male 34 years. Under atrophy, 2 cases of want of breast-milk, a male 9 weeks, and a female 2 months. Under malformation, "cyanosis," a male 1 year. Under disease of the brain, "cephalgia," a male 5 months. Under worms, "infantile fever (5 weeks)," a male 1 year. Under disease of the kidneys, "granular kidneys (post. mort.)," a male 45 years; and "granular kidneys," a female 46 years. Under privation, "inflammation of the chest produced by privation," a male 1 year, and "privation," a female 30 years. And under causes not specified, "found dead in a pickle bottle," a female new-born. The ages of 7 persons who died at 90 years and upwards were as follow:—two males 90 years; one 92; one 93 and one 98; and one female 91; and one (in Shoreditch) 101 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- "Accidental death—being thrown out of his chaise drawn by one horse," a male 58.
- "Accidentally run over by a waggon drawn by 4 horses, a male 31.
- "Accidental death from a fall down steps, causing effusion," a female 60.
- "Accidental fall into the street, whilst cleaning a window," a male 42.
- \* "Congestion of the brain, caused by a fall," a male 70.
- \* "Natural death, accelerated by a fall," a female 86.
- "From an unavoidable fall at the birth, causing compression of the brain," a female 1 day.
- \* "Climacteric decay, accelerated by a fall," a female 82.
- "Rupture of a blood-vessel of the brain, resulting from accidental falls when intoxicated," a female 48.

### WOUND:—

- "Suicide by cutting his throat, being at the time of unsound mind," a male 42.

### DROWNING:—

- \* "Accidental death from drowning," a male 65.
- "Suicide by drowning in the Surrey Canal, being at the time of unsound mind," a female 25.

### HANGING and SUFFOCATION:—

- "Hanged himself, being insane," a male 55.
- "Suicide by hanging in temporary insanity," a male about 55.
- "Accidentally suffocated at the breast of her mother," a female 2 months.
- "Accidentally suffocated in bed (p. mort.)," a male 1 month.

### BURNS and SCALDS:—

- "Accidentally burnt by her clothes taking fire," a female 17.
- "Burns received by her clothes accidentally taking fire," a female 54.
- "Exhaustion following a burn of the arm, 19 days since—the shirt sleeve caught fire over a candle," a male 88.
- "Scalds caused accidentally by pulling a teapot from a table, containing tea," a male 1.
- \* "From a scald," a male 1.

### POISON:—

- "Suicide by arsenic—insanity, 7 hours," (p. mort.), a male 45.
- "Died from arsenic drunk in tea; by whom put therein, no proof," a male 62.
- "Arsenic drunk in tea; by whom put therein, no proof," a female 51.

\* Nos. 5, 6, and 8, are defective returns: the place and other circumstances of the falls should have been indicated. In No. 11 the nature of the accident by which the person came into the water should have been stated. No. 21 is also an imperfect return.

General Register Office, Tuesday, March 4th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH.  
During the Week ending Saturday, March 1st, 1845.

1845 Day	Phases of the Moon	Readings of Thermometers												Difference between the Dew Point Temperature and Air Temperature				WIND				Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS

FEB.		in.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																															

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be covered by 0 a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the wind, are taken every morning at 6 a.m., and therefore exhibit the highest and lowest readings respectively that have been observed in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

In reading the 15th column, it will be borne in mind that + is read "warmer," and - is read "cooler," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the Observatory for the same time, was 39.0; and the mean reading at 7h. 30m. p.m. was 39.1; the mean readings at 3h. 30m. a.m. were 39.0, 39.1, and 39.2, respectively.

† The direction of the wind for the week has been variable.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, March 8th.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—The 25 deaths from *small-pox* occurred at the following ages:—four under 1 year; six 1-3; one 3-5; three 5-10; three 15-20; six 20-30; and two 30-40 years.

2.—Under *scrofula* are included “rickets,” a male 8 weeks; and “cachexia,” a male 30 years. Under *cancer*, “fungus hæmatodes of the leg— hæmorrhage 5th day after amputation,” a male 40 years. Under *atrophy*, 2 cases of want of breast-milk, a female 4 days, and a male 9 days. Under *malformation*, “cyanosis,” a male 24 days, and “imperforate anus,” a male 12 days. Under *convulsions*, “frequent convulsive fits following fright 2 months since,” a female 48 years. Under *disease of the nervous system*, “mental anxiety producing premature old age,” a female 66 years. Under *pleurisy*, “empyema,” a female 59 years. Under *disease of the heart*, “angina pectoris,” a male 40 years. Under *disease of the liver*, “bronchitis (11 weeks) cirrhosis,” a female 47 years. Under *disease of the kidneys*, “chronic bronchitis—dropsy—granular disease of the kidneys (2½ years),” a male 53 years; “Bright’s disease of the kidneys,” a female 64 years; and “ulcerated kidneys,” a male 13 years. Under *disease of the joints, bones, &c.*, “caries of the cranium,” (post mort.) a male 29 years. Under *disease of the skin*, “pompholyx,” a female 1 year. And under *privation*, “congestion of the lungs and brain from exposure to cold,” a male 16 years. Two men died at the respective ages of 90 and 91 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Accidental by a fall from a step-ladder—fractured skull, and torn brain (32 hours),” *post mort.*, a male 56.
- (2) “Compression by an accidental fall from a scaffold on his head,” a male 22.
- (3)\* “Accidental by a fall causing fractured ribs and erysipelas,” a male 73.
- (4) “Injuries to the head by an accidental fall from a scaffold,” a male 42.
- (5) “Accidental by a fall down stairs—fractured skull and torn brain (23 days),” *p. mort.*, a female 60.
- (6) “Suicide in temporary insanity—threw herself from a window—fractured spine (140 days),” *p. mort.*, a female 19.
- (7) “Injuries from having been knocked down by a runaway horse,” a female 77.
- (8)\* “Fractured thigh, how caused unknown,” a male 69.
- (9)\* “Concussion of the brain,” a female 15.

### WOUNDS:—

- (10) “Suicide by cutting her throat being at the time of unsound mind,” a female 26.
- (11) “Suicide by cutting his throat—insanity from drinking,” a male 40.
- (12) “Accidental by a cut on her throat, from a fall over a stone on a pitcher,” a female 16.
- (13)\* “Wound,” a male 67.

### DROWNING:—

- (14)\* “Accidentally drowned in the River Thames, a male 29.
- (15)\* “Found drowned,” a female 23.

### HANGING and SUFFOCATION:—

- (16) “Hanged himself—state of mind unknown,” a male 13.
- (17) “Accidentally suffocated in bed,” a female 11 months.
- (18) “Accidental suffocation from swallowing a screw,” a male 2.

### BURNS and SCALDS:—

- (19) “Accidentally burnt by setting her clothes on fire with a lighted candle in absence of the mother,” a female 3.

- (20) “Accidental burn from her clothes taking fire on a theatrical stage,” a female 21.
- (21) “Accidental from burns by his clothes taking fire,” a male 6.
- (22) “Accidental from burns by his clothes taking fire,” a male 7.
- (23) “Accidental from his clothes taking fire,” (17 hours) a male 4.
- (24) “Accidental death by her clothes taking fire,” (20 days) a female 6.
- (25) “Accidental from her clothes taking fire,” (34 hours) a female 3.
- (26) “Burns from her clothes accidentally taking fire at a grate,” a female 10.
- (27) “Accidental by burns from her clothes taking fire,” a female 7.
- (28) “Accidental by burns from her clothes taking fire,” a female 6.
- (29) “Accidental by burns from her clothes taking fire,” a female 83.
- (30) “Accidental by burns from her clothes taking fire,” a female 12.
- (31) “Accidentally burnt by her clothes taking fire,” a female 5.
- (32) “Accidentally burnt by her clothes taking fire,” a female 6.
- (33) “Lock jaw, the result of injuries received from being burnt by her clothes taking fire accidentally,” a female 66.
- (34) “Burns received by her clothes accidentally taking fire” (6 days), a female 65.
- (35)\* “Accidental burn,” a male 5.
- (36)\* “Injuries from being accidentally burnt,” a male 4.
- (37)\* “Accidental burns,” a female 9.
- (38)\* “Accidental burn,” a female 5.
- (39)\* “Effects of a scald, 5 weeks before,” a female 3.

### MEANS NOT STATED:—

- (40)\* “Wilfully murdered by some person unknown,” a female newly born.

\* Nos. 3, 8, 9, 13, 14, 15, 35, 36, 37, 38, 39, and 40, are imperfect returns: the means by which injury was caused, place, or other circumstances, are improperly omitted.

General Register Office, Tuesday, March 11th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, March 8th, 1845.

1845 Day	Phase of the Moon	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature				WIND				FLECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS	
		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)		Dry		Mean		In the Water at 6 fathoms by the self- registering thermometer, read at 9 o'clock next morning		Lowest		Greatest		Direction		Force		Amount of Horizontal Movement of the Air in each day					Rain in inches, read at 9 o'clock
		in.	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°				°
Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)	Phase of the Moon	in.	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°	°		
29.926	31.4	24.2	29.3	25.1	50.0	18.1	36.4	35.6	3.9	7.6	1.2	—11.9	N.E.	Sum	7.3	0.18	Sum	85.0					

The height of the eastern of the barometer is considered to be 1.79 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations were taken every two hours, day and night, with the exception of Sunday. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 25 years is furnished by Mr. Heath, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

In reading the 13th column, it will be borne in mind that a "read 100 near" and — is read "lower," than the average.

The temperature of the water at 6 fathoms is ascertained by the use of a self-registering thermometer suspended from the side of the Dreadnought Hospital Ship, at a depth of about 5 feet below the surface. The readings of this instrument are registered under

(the superintendent of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 29.5; and the mean reading at 7h. 20m. p.m. was 27.2; the mean readings at the Observatory for the same times were 28.7 and 27.3 respectively. The general direction of the wind for the week has been N.E.

The sky was overcast until 6h. 20m., but at that time a few breaks to no numerical extent were visible. From 6h. 20m. to 4h. p.m. it was about one-half covered; and from 4h. p.m. till 11h. p.m. the sky was cloudless; at the latter time the clouds again suddenly appeared and the sky was again covered with one uniform cloud.

Overcast until 6h. a.m.; the amount of cloud throughout the remaining part of the day was variable.

The sky remained clear till 2h. 30m. a.m., when it became suddenly overcast, and with the exception of occasional breaks it remained cloudy during the remainder of the day.

Overcast until shortly before noon, and snow was falling during the early part of the morning. The sky in the afternoon was generally covered with cumuli and cirrostrati, and in the evening it was nearly clear.

Overcast until 4h. a.m., at which time a little snow was falling. The sky was generally covered until after 4h. p.m. At 5h. p.m. a few lines of stratus near the S. horizon were the only clouds visible, and the sky remained nearly clear throughout the remainder of the day. At about 4h. p.m. snow like a fine powder was falling, and the air was remarkably cold.

Overcast till after 4h. p.m. At 5h. p.m. several small breaks were visible in various directions, and at 7h. p.m. the clouds had all disappeared. The sky remained cloudless until 10h. when it again became overcast. Rain began to fall at 3h. a.m. and it continued until after noon, when the wind suddenly changed from W.S.W. to N.E., and the rain immediately turned to snow, with a fall in the temperature of 6.5 in a short time.

The sky was covered with cloud until 6h. 30m. a.m.; from that time till 3h. p.m. the main cloud was variable, and after 3h. p.m. the sky was again covered. At 6h. 10m. a.m. a few small flakes of snow were falling.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, March 15th.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penze); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 32 deaths from small pox occurred at the following ages:—eight under 1 year; ten 1-3; five 3-5; three 5-10; one 17; four 20-30; and one 30 years.

3.—Under cephalitis is included “disease of the ear producing cerebritis,” a male 9 years. Under pleurisy, “empyema,” a female 60 years. Under stricture of the intestinal canal, “stricture of the rectum,” a male 8 days. Under disease of the kidneys, “granular disease of the kidneys,” a male 22 years, and a female 62 years; and “albuminuria (4 months),” a male 42 years. Seven persons died at the following advanced ages:—2 males respectively at 91 and 97 years; and 5 females 90, 92, 92, 93, and 97 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1)\* “Natural death by a blow on his head from a fall,” a male 3 months.
- (2)\* “Natural death, accelerated by an accidental fall,” a male 60.
- (3) “Accidental death from a fall down stairs,” a female 77.
- (4) “Accidental death by a blow on the head by a fall from a chaise on the 12th instant,” a male 49.
- (5) “Fracture of the ribs, &c., accidentally run over by a cart,” a male 66.
- (6) “Fracture of the bones of the spine by the fall of a packet of hops upon him,” a male 35.
- (7)\* “Diseased testicle from injury—death 16 days after castration, from inflammation of the bowels,” a male 28.

### DROWNING:—

- (8) “Drowned in the River Thames, but no proof by what cause,” a male about 24.
- (9) “Drowned in the River Thames—no proof by what cause,” a male about 17.

### HANGING and SUFFOCATION:—

- (10) “Hanging himself in temporary insanity,” a male 76.
- (11)\* “Found dead, apparently caused by pressure,” a female 10 weeks.
- (12) “Strangulation in birth,” a male 1 minute.
- (13)\* “Accidentally suffocated,” a male 8 weeks.
- (14)\* “Found dead, apparently suffocated,” a male 5 weeks.

### BURNS and SCALDS:—

- (15) “Effects of accidental burning, by her clothes taking fire,” a female 52.
- (16) “Accidentally burnt by her clothes taking fire,” a female 5.
- (17) “Accidentally burnt by his clothes taking fire,” a male 3.
- (18) “Accidentally burnt by his clothes taking fire,” a male 3.
- (19) “Accidentally burnt by his clothes taking fire,” a male 10.
- (20) “Accidental death from burns by the clothes taking fire,” a male 2.
- (21) “Accidentally burnt by his clothes taking fire,” a male 6.
- (22) “Accidentally burnt by her clothes taking fire,” a female 13.
- (23) “Accidentally burnt by her clothes taking fire,” a female 50.
- (24) “Accidentally burned whilst making a rocket,” a male 33.
- (25)\* “Accidental burns,” a female 40.
- (26)\* “Effects of injuries received from being accidentally burnt,” a male 6.
- (27)\* “Burns on the arms and face,” a female 3.
- (28)\* “Accidentally scalded,” a male 1.
- (29) “Accidentally scalded by a kettle of boiling water,” a female 3.

\* Nos. 1, 2, 7, 11, 13, 14, 25, 26, 27, and 28, are imperfect returns: the cause of injury, or circumstances in which it occurred, have been improperly omitted.

General Register Office, Tuesday, March 18th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, March 15th, 1845.

The height of the eastern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass have occurred in the sky; and in the evening at 6 a.m., and therefore exhibit the highest and lowest readings respectively that on which the thermometers are read. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, 22nd March.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—The 28 deaths from *small pox* occurred at the following ages:—six under 1 year; eight 1—3; three 3—5; five 5—10; one 12; four 20—30; and one 30 years.

2.—Under *erysipelas*, is included 1 case of “glanders,” a male aged 40 years. The deceased was a horsckeeper, who had been in the habit of using his handkerchief to wipe the horse's nose and mouth. Under *atrophy*, 3 cases of want of breastmilk, males, aged 6 days, 10 days, and 13 days. Under *disease of the brain, nerves, and senses*, “*ophthalmia*,” a female, 1 year; and “*abscess of the ear*,” a female, 1 year. Under *pleurisy*, “*empyema*,” a female, 69 years. Under *phthisis*, “*hectic fever*,” a female, 27 years. Under *disease of the heart*, “*bronchitis with morbus cordis—albuminuria*,” ill 6 months,” a male, 34 years. Under *worms*, “*infantile fever*,” a male, 2 years. Under *disease of the urinary organs*, “*rupture of the urethra—extravasation of urine into scrotum, &c. sloughing from stricture of many years' standing—granular kidneys (post mort.)*” a male, 53 years; and “*granular disease of the kidneys*,” a male, 73 years. Under *paramenia*, “*exhaustion by loss of blood from long continued and profuse menorrhagia*. Under *disease of the skin*, “*pemphigus gangrenosus*,” a female, under 1 year. And under *privation*, “*want of the common necessities of life*,” a female, 78 years; and “*bronchitis and destitution*,” a female 56 years. Six persons died at the following advanced ages:—a male at 90 years; and 5 females, at 92, 94, 95, 96, and (in the district of St. George, Hanover-square,) at 102 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Organic disease of the brain, 14th day after an injury to the head by a fall on the ice,” (*p. mort.*) a male 11.
- (2) “Inflammation of the pleura from accidentally falling out of bed,” a male 71.
- (3) “Accidental death from a fall—incised wound, ending in *erysipelas*,” a female 69.
- (4) “Injury to his spine by a chimney falling on him,” a male 47.
- (5) “Accidentally run over by a timber-carriage,” a male 44.
- (6) “Accidental death by the fracture of his left hand from the wheel of a dray,” a male 46.
- (7) “Fractured leg—accidentally run over by a waggon,” a male 16.
- (8) “Accidental fracture of his ribs by a waggon-wheel,” a male 59.
- (9) “Accidentally crushed between a grindstone and a rigger (5 days),” a male 39.
- (10) “Effects of a compound fracture of the leg,” a female 79.
- (11) “Laryngitis, and necrosis of the leg, following a blow 16 years since (*p. mort.*)” a female 50.
- (12) “Injuries by being accidentally crushed,” a male about 35.

### WOUNDS:—

- (13) “Suicide by cutting his throat, being of unsound mind,” a male 13.
- (14) “*Erysipelas* from an accidental scalp-wound,” a male 54.
- (15) “Laceration of scalp, and other injuries, from a fly-wheel,” a male 38.
- (16) “Suicide by cutting his throat with a razor—insane at the time,” a male 54.
- (17) “Tetanus from an abrasion on the leg,” a male 30.
- (18) “Palmar abscess, and absorbent inflammation consequent on a needle in the hand (1 month),” a female 40.

### DROWNING:—

- (19) “Accidentally drowned, while washing his face over the side of a canal-boat,” a male about 30.
- (20) “Found dead in the River Thames,” a male 54.

### HANGING and SUFFOCATION:—

- (21) “Self destruction by hanging, in temporary derangement,” a female 17.

- (22) “Suicide by hanging himself from a bedpost, of unsound mind,” a male 51.

- (23) “Accidentally suffocated by being overlaid by his mother,” a male under 1.

### BURNS and SCALDS:—

- (24) “Burns received by her clothes accidentally taking fire, (10 days),” a female 16.
- (25) “Accidentally burnt by her clothes taking fire,” a female 6.
- (26) “Accidentally burnt by his clothes taking fire,” a male 3.
- (27) “Accidentally burnt by his clothes taking fire,” a male 3.
- (28) “Accidentally burnt by his clothes taking fire,” a male 4.
- (29) “Accidentally burnt by his clothes taking fire,” a male 5.
- (30) “Accidental from her clothes taking fire (2 months),” a female 72.
- (31) “Accidentally burnt by her clothes taking fire,” a female 3.
- (32) “Accidentally burnt by her clothes taking fire,” a female 1.
- (33) “Accidentally burnt by her clothes taking fire,” a female 75.
- (34) “Burnt by her clothes accidentally taking fire (8 hours)” a female 37.
- (35) “Accidentally burnt,” a male 3.
- (36) “Accidentally burnt,” a female 102.
- (37) “Effects of a burn,” a female 61.
- (38) “Injuries received by burning,” a female 3.
- (39) “Scalded by accidentally falling into a kettle of boiling water (32 hours),” a female 10 months.

### POISON:—

- (40) “Some irritative poison—but no evidence of what kind (*p. mort.*)” a male 23.
- (41) “Poisoned with tartaric acid, feloniously administered to him by Peter Watkins, a druggist, of Clerkenwell,” a male 24.
- (42) “Poisoning himself with prussic acid in temporary insanity,” a male 18.

### EXPOSURE:—

- (43) “Neglect at the birth, and so wilfully murdered and exposed by a person or persons unknown,” a female newly born.

\* Nos. 3, 10, 11, 12, 14, 17, 20, 35, 36, 37, 38, and 40, are imperfect returns, inasmuch as they do not indicate the cause of injury, place, or other circumstances. In the table, No. 17 is included under the head of *tetanus*.

General Register Office, Tuesday, March 25th, 1845.

*During the Week ending Saturday, March 22nd, 1845.*

[illegible]

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays.

The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 12th column, it will be borne in mind that + is read "ninen" and — is read "lover," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are recorded under the heading of "Temperature of the River Thames," in the *Annual Report of the Royal Observatory*, from the observational made at his residence in the neighbourhood of Greenwich Park.

the superintendent of Lieutenant Sanders, R. N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h, 30m, a.m., was 31°·1; and the mean reading at 7h, 30m, p.m., was 35°·2; the mean readings at the Royal Observatory for the same times were 30°·5, and 35°·5 respectively.

<sup>†</sup> The Royal Observatory for the same times were 40°·5, and 35°9 respectively.

and S. W., at the end of the week.

From March 12th, 6th, p.m., to 13th, 10th, a.m. the reading of the thermometer in air at the height of 4 feet and protected from radiation, was always less than 2°25, except on the 14th day at 4h, p.m., at which time the reading was 2°30; on the 18th, at noon the reading had increased to 36°-7 and two hours afterwards it was 39°-7, a reading higher than any other this month, with the exception of a few readings on the 10th day which were higher than 40°2. The lowest readings on grass this week were inserted above, the other remarkable low readings are as follows:

On 17th, at 7 p.m., Glasgow were, during the night common to the 10th and 17th day, the thermometer on flax was 45°-5 and on raw wool 44°-0; and these low readings are comparable, being on the day of the vernal equinox, the night was very clear, and during the day of it, the reading of the thermometer on long grass was from 17°-0, to 19°-0, less than that in air; those on flax and raw wool were always 2°25, below the temperature of the air; these differences are unusually large, and their times of continuance were much longer than usual. There appears to be no record of so extraordinary a season as this has been with respect to temperature.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES.

REGISTERED  
*In the Week ending Saturday, 29th March.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—The 32 deaths from *small pox* occurred at the following ages:—six under 1 year; eight 1—3; five 3—5; six 5—10; three 10—15; one 17; one 24; one 45; and one 51 years.

2.—Under *hemorrhage* is included "hemorrhage after leeches," a male 1 year. Under *atrophy*, 3 cases of want of breastmilk, 2 males respectively 3 months and 4 months; and a female 5 months. Under *malformation*, "spina bifida," a male 9 weeks. Under *disease of the brain*, "disease of the brain, accelerated by length of imprisonment (inquest)," a male 57 years. Under *phthisis*, "phthisis laryngea," a female 19 years. Under *diabetes*, "diabetes mellitus and albuminuria (3 years)," a male 56 years. Under *disease of the urinary organs*, "albuminuria, ill 10 months," a male 60 years; and "fistula of the bladder," a male 26 years. And under *causes not specified*, "natural death, accelerated by over-exertion," a male 74 years. One male and three females died severally at 90 years, a male at 91, and two females respectively at 92 and 97 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1)\* "Accidental fracture of his skull by a fall," a male 71.
- (2)\* "Fracture of his skull by falling down in a fit," a male 50.
- (3)\* "Extravasation of blood into the membrane covering the spinal cord, produced by a fall," a male 39.
- (4) "Bodily injuries received by falling with a tree, accidentally," a male 26.
- (5) "Accidental death from a fall down stairs, and concussion of the brain then caused," a female 2.
- (6)\* "Accidental from a fall," a female apparently about 70.
- (7)\* "Natural death, which may have been accelerated by a fall," a female 37.
- (8) "Accidentally run over by the Norwich mail, causing mortal contusions," a male 8.
- (9) "Fractured skull, and shock caused by the rupture of a steam-boiler—manslaughter against George Low," a male 36.
- (10) "Concussion of the brain from a fall or blow, but not sufficient evidence how or where the injury was received," a female 7 weeks.
- (11)\* "Disease of the kidneys following upon injury of the spine (12 months)," a male 56.

### WOUNDS:—

- (12) "Suicide with a pistol by shooting into the head, whilst insane," a male 44.
- (13) "Cut his throat in temporary derangement of mind," a male 22.

### DROWNING:—

- (14) "Drowning himself in insanity," a male 38.
- (15) "Drowning—suicide," a female 38.
- (16) "Found drowned, but no proof by what cause," a male 49.

### HANGING and SUFFOCATION:—

- (17) "Hanging himself in temporary insanity," a male about 40.
- (18) "Hanged himself in a cellar, being at the time of unsound mind," a male 51.
- (19) "Hanged himself, state of mind unknown," a male 32.
- (20) "Hung himself," a male age not known.
- (21) "Executed," a male 22.
- (22)\* "Accidentally suffocated," a female 3 months.
- (23)\* "Accidentally suffocated," a male 3 months.
- (24) "Accidentally overlaid by his mother," a male 7 weeks.
- (25) "Accidentally suffocated in bed," a female 12 weeks.

### BURNS and SCALDS:—

- (26) "Accidentally burnt by his clothes taking fire," a male 3.
- (27) "Accidentally burnt by his clothes taking fire, as he sat at a fire-grate," a male 1.
- (28) "Burns from his clothes accidentally taking fire, while in a fit," a male 75.
- (29) "Accidental, from his clothes taking fire in his mother's absence," a male 3.
- (30) "Accidentally burnt by his clothes taking fire," a male 9.
- (31) "Accidental from burns by his clothes taking fire," a male 4.
- (32) "Burns received by his clothes accidentally taking fire (18 days)," a male 5.
- (33) "Burns received by his clothes accidentally taking fire (9 days)," a male 9 months.
- (34) "Accidentally burnt by her clothes taking fire," a female 10.
- (35) "Accidentally burnt by her clothes taking fire," a female 4.
- (36) "Accidentally burnt by her clothes taking fire," a female 4.
- (37) "Accidentally burnt by her clothes taking fire," a female 3.
- (38) "Accidentally burnt by her clothes taking fire (deaf and dumb)," a female 20.
- (39) "Accidentally burnt by her clothes taking fire," a female 10.
- (40) "Accidentally burnt by her clothes taking fire," a female 4.
- (41) "Accidentally burnt by her clothes taking fire, a female 4.
- (42)\* "Accidentally burnt," a male 1.
- (43)\* "An accidental burn," a male 2.
- (44)\* "Accidental burn," a female 6.
- (45) "Inflammation of the air-passages, caused by drinking hot water out of a tea-kettle," a male 2.
- (46) "Scalds and contusions caused by the rupture of a steam-boiler—manslaughter against George Low," a male 26.
- (47) "Scalds and contusions caused by the rupture of a steam-boiler—manslaughter against George Low," a male 29.
- (48) "Accidental by scalds from a kettle of boiling water slipping and discharging its contents upon her," a female 3.
- (49) "Accidental death from scalds on her back by the fall of a tea-kettle, a female 2.
- (50)\* "Scald," a female 3.

\* Nos. 1, 2, 3, 6, 7, 11, 22, 23, 42, 43, 44, and 50, are imperfect returns, inasmuch as they do not indicate the cause of injury, place, or other circumstances.

General Register Office, Tuesday, 1st April, 1845.

*During the Week ending Saturday, March 29th, 1845.*

## NOTES.

1.—The 29 deaths from *small pox* occurred at the following ages:—six under 1 year; eight 1—3; nine 3—5; two 5—10; one 10; one 19; and two 20—30 years.

2.—Under *malformation* are included "morbis cœnurus," a female 2 years; and "imperforate rectum," a female 6 weeks. Under *laryngitis*, "laryngismus stridulus," a male 7 months, and a female 10 months. Under *disease of the heart*, "heart nearly double its proper size, with diseased valves and aorta—granulated kidneys," a male 50 years; and "serous apoplexy—hydratids were found in the lateral ventricles (*p. mort.*)," a male 53 years. Under *hernia*, "inflammation after operation for strangulated hernia, 22nd March—femoral left side—mortification of right leg—inflammation of right saphena vein, &c. (*p. mort.*)," a female 42 years. And under *disease of the kidneys*, "Bright's disease (3 months)," a male 40 years; and "necrotized bladder and rectum," a female 52 years. Six females died at the following advanced ages—91, 92, 93, 97, 99, and 105 years—the last in the district of Poplar.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) "Crushed accidentally by a cart," a male 51.
- (2) "Mortal fracture and injuries received by the off-wheel of a certain cart passing over his head accidentally," a male 6
- (3) "A fall out of a window," a female 19.
- (4) "Injuries by an accidental fall from a scaffold in front of a house," a male 30.
- (5) "Accidental death by a fall from the platform of a swing," a male 48.
- (6) "Injuries by accidentally falling from a ladder, while carrying up a board to repair a scaffold," a male 41.
- (7) "Concussion of the brain by falling off a wall accidentally," a male 6
- (8) "Accidental death by a blow on his head and body from the fall of rods of iron," a male 22.
- (9) "Accidental death by a blow on his head and body from the fall of rods of iron," a male 27.
- (10)\* "Injuries to the liver from being ruptured," a male 30
- (11)\* "Injuries from being accidentally crushed," a male 42.
- (12)\* "Tetanus caused by an injury to his finger," a male 25.
- (13)\* "Fractured thigh," a male 81.

### WOUNDS:—

- (14) "Mortification of the thumb from running a splinter into it," a female 63.

### DROWNING:—

- (15) "Found dead in the waters of a certain pond," a female 23.
- (16) "Suicide in unsound mind—drowning," a male 52.
- (17)\* "Accidentally drowned," a male 8.
- (18) "Accidentally drowned in the River Thames," a male 31.

\* Nos. 10, 11, 12, 13, 17, 26, 30, 31, 32 and 36. are defective records, inasmuch as the *cause of injury*, place, or some other circumstance, is not indicated. In the abstract, No. 12 is classed under *tetanus*.

- (19) "Found dead, apparently drowned," a male, age unknown.

- (20) "Found drowned in the River Thames, by what means there is no proof," a male about 25.

- (21) "Drowned, by what means no proof," a male, supposed 25.

- (22) "Found drowned in the Commercial Dock, by what means there is no legal proof," a male about 30.

### HANGING and SUFFOCATION:—

- (23) "Hanged himself in temporary derangement of mind," a male 18.

- (24) "Wilful murder from suffocation, by some person or persons unknown," a female, part of 1 day.

- (25) "Suffocation from the accidental fall upon him of a dust-heap," a male 22.

- (26)\* "Accidentally suffocated," a female 4 weeks.

### BURNS:—

- (27) "Burning of his clothes accidentally with a lucifer match," a male 2.

- (28) "Accidentally burnt by her clothes taking fire," a female 3.

- (29) "Accidental death from her clothes taking fire (2 hours)," a female about 70.

- (30)\* "Accidental burn," a male 4.

- (31)\* "Accidental burns," a male 2.

- (32)\* "Accidental burn," a female 6.

### POISON:—

- (33) "Taking arsenic in temporary insanity," a female 36.

- (34) "Snuff in temporary mental derangement—diluted essential oil of bitter almonds (2 hours)," p. m., a female 37.

- (35) "Oxalic acid—suicide," a female 51.

### MEANS NOT STATED:—

- (36)\* "Wilfully murdered by persons unknown," a female newly born.

The height of the eastern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the shade, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer from the indications of which the estimation of horizontal movement is made, is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

† The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London *within and without the Walls*, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Gravency; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 16 deaths from *small pox* occurred at the following ages:—three under 1 year; two 1-3; four 3-5; two 5-10; one 11; two 15-20; and two 20-30 years.

3.—Under *atrophy* is included 1 case of want of breastmilk, a male 1 year. Under *disease of the heart*, “disease of the heart, liver, kidneys (duration of each indefinite), anasarca—death from erysipelas, consequent on puncturing the legs,” a female 45 years. Under *disease of the digestive organs*, “distention of the bowels, caused by severe dyspepsia,” a male 45 years; and “gastralgia,” a male 59 years. Under *disease of the womb*, “metritis,” a female 22 years. And under *disease of the skin*, “psoriasis, convulsions,” a male 5 months. Two men died at the respective ages of 90 and 91 years.

4.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Accidentally thrown out of a cart he was driving, by collision with an omnibus,” a male 34.
- (2) “Accidentally run over by a cab,” a female 78.
- (3) “Injury to his spine by a sack of potatoes falling on him,” a male about 40.
- (4)\* “Fracture of his right leg by an accidental fall,” a male 54.

### WOUNDS:—

- (5) “Shot himself with a pistol, but in what state of mind not sufficient evidence,” a male 75.
- (6) “Suicide by cutting his throat with a razor, while insane,” a male 71.
- (7) “Cutting her throat under mental derangement,” a female 32.

### BURNS and SCALDS:—

- (8) “Accidentally burnt by his clothes taking fire,” a male 4.
- (9) “Accidentally burnt by her clothes taking fire,” a female 14.
- (10) “Accidentally burnt by her clothes taking fire,” a female 1.
- (11) “Burnt, but no evidence of the cause of the fire,” a female 4.
- (12) “Accidental, by drinking boiling water out of a kettle,” a male 1.
- (13) “Accidental death from scalds on his legs and thighs, by the falling of a kettle of boiling water,” a male 3.

\* No. 4 is a defective return: *place* and other circumstances of the accident should have been stated.

*During the Week ending Saturday, April 12th, 1845.*

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the aneroid and the aneroid barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, and at night, with the exception of Sundays.

The reading of the two self-registering thermometers, the one placed in the still rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the

temperature at the Observatory at 7h. 30m. p.m. FOR 42° 7 READ 44° 5.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Gravency; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 25 deaths from small pox occurred at the following ages:—three under 1 year; six 1-3; five 3-5; six 5-10; three 10-15; one 28; and one 36 years.

3.—Under erysipelas, is included “erysipelas mottled—granular kidneys—partial pneumonia,” a male 45 years. Under hæmorrhage, “hæmorrhage from the nose,” a female 51 years. Under scrofula, “cachexia,” a female 2 years. Under cancer, “fungus hæmatodes of the eyeball,” a female 73 years. Under malformation, “cyanosis,” a male 11 months; and “foramen ovale open,” a male 4 days. Under paralysis, “paralysis from lead, and chronic bronchitis,” a male 41 years. Under pleurisy, “empyema,” a female 57 years. Under phthisis, “laryngeal phthisis,” a male 43, and a female 40 years. Under disease of the heart, “morbus cordis, hepatis—granular kidneys, ascites, anasarca,” a female 33 years. Under stricture of the intestinal canal, “stricture of the rectum,” a female 52 years. Under disease of the digestive organs, “salivation,” a female 38 years. Under disease of the kidneys, “extravasation of urine, disease of the urethra (2 days),” a male 54 years; “granular disease of the kidneys—pneumonia—pericarditis,” a male 26 years; and “granular disease of the kidneys—dropsy—coma,” a male 32 years. Under disease of the organs of generation, “extensive mammary abscess bursting into the chest (3 months),” a female 29 years. Under disease of the joints, “caries of the vertebræ,” a female 18 years. And under fistula, “fistula in ano—operation—death from bronchitis on the 9th day,” a male 51 years. A female died at the advanced age of 96 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Accident by a horse and cart,” a female 30.

### WOUNDS:—

- (2) “Accidentally shot by a pistol through his head,” a male 19.  
(3) “Tetanus caused by a wound in the foot, by a rusty nail,” a female 26.  
(4)\* “Traumatic tetanus,” a male 9.

### DROWNING:—

- (5) “Found drowned in the River Thames—cause unknown,” a male 15.  
(6) “Found dead in the River Ravensbourne,” a male about 34.

### HANGING and SUFFOCATION:—

- (7) “Hanged himself,” a male 32.  
(8) “Hung himself with his handkerchief—not sufficient evidence of his state of mind at the time,” a male 44.  
(9) “Suicide by hanging herself while insane,” a female 46.  
(10) “Accidentally suffocated in bed,” a male 3 months.

### BURNS and SCALDS:—

- (11) “Accidental burn caused by her clothes taking fire while stepping on a fender to take something off the mantlepiece,” a female 15.  
(12) “Scalds by accidentally falling into a pan of boiling water,” a male 2.

### POISON:—

- (13) “Suicide by poisoning with oxalic acid, state of mind unknown,” a female 29.

\* No. 4 is a defective return: the injury by which tetanus was caused should have been described. Nos. 3 and 4 are classed, in the abstract, under tetanus.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, April 19th, 1845.

Date	Phase of the Moon	Readings of Thermometers										Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years			WIND				Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)		In the Water of the Thames at Greenwich, by the self-registering thermometer, read at 10 o'clock next morning				Air Temperature		General Direction	Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day										
				Highest	Lowest	Mean	Greatest	Least	Mean		Greatest												
												Obs.	12	19	Obs.								
APRIL		in.	High- est	Low- est	Mean from 12 to 19	Dew Point	Highest in the sun, as shown by a self-registering thermometer	Lowest on the grass, as shown by a self-registering thermometer	In the Water of the Thames at Greenwich, by the self-registering thermometer, read at 10 o'clock next morning	Air Temperature	Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	A.M.	P.M.	lbs.	lbs.	Miles							
Su. 13																							
M. 14	1st Quarter	29.331	50.3 42.1	44.9 38.8	41.7 38.6	52.5	35.3	35.3	45.5	45.5	6.1 11.6	2.6	— 1.4	W.S.W.	4.5 0.1	1.3 325	9.0 0.14					Overcast until 6h. p.m.; during the remainder of the evening the sky was generally clear; at midnight however it again suddenly became covered. Rain was falling during a great part of the day.	
Tu. 15		29.711	44.3 39.6	41.7 38.6	40.5 37.5	46.5	37.5	37.5	45.0	45.0	3.1 5.1	1.5	— 5.0	W.S.W.	10.0 0.5	3.0 350	8.2 0.13					At 1h. a.m. the sky was nearly clear, and also for a short time about noon: with these exceptions it was generally overcast. Several very heavy squalls of rain, and violent gusts of wind occurred during the day.	
W. 16		30.134	52.0 39.1	43.2 39.7	68.2 28.5	45.2	28.5	28.5	45.0	45.0	3.5 8.4	1.0	— 2.7	N.N.E.	12.0 0.5	2.8 295	10.0 0.01					Overcast throughout the day. Rain was falling during the early part of the morning, and the wind was blowing a strong gale nearly the whole day.	
Th. 17		30.129	58.0 38.1	47.3 40.1	80.2 35.5	45.5	35.5	35.5	45.5	45.5	7.2 14.1	1.5	+ 1.6	N.N.E.	6.0 0.2	1.4 200	2.5 0.00					The sky remained overcast until 3h. p.m. The amount of cloud during the afternoon and evening was variable, but the sky became cloudless at 11h. p.m.	
F. 18		30.012	54.7 38.8	46.6 38.8	77.2 31.1	46.2	31.1	31.1	46.0	46.0	7.8 15.4	1.4	+ 1.4	N.N.E.	2.0 0.1	0.3 160	5.8 0.01					A few cumuli were prevalent in the afternoon, with that exception the sky was cloudless until at about 9h. p.m.; the sky at 9h. p.m. suddenly became overcast, and it continued so.	
Sa. 19	In Equator	29.921	58.1 40.0	47.9 42.1	83.0 25.0	47.5	25.0	25.0	46.8	46.8	5.8 12.6	0.0	+ 2.0	N.N.E.	2.0 0.1	0.5 160	4.2 0.00					Overcast until about noon: the sky then became clear and remained so until 10h. p.m. When clouds again covered the sky.	
MEANS.		29.873	52.9 39.6	45.3 39.7	67.2 32.6	45.8	32.6	32.6	45.6	45.6	5.6 11.2	1.3	— 0.7	+ N.N.E.		Sum 1705	Sum 6.9	Sum 0.29					Overcast until shortly before noon: at that time no clouds were visible, and the sky continued clear throughout the remaining portion of the day.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 14th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 7h. 30m. a.m., was 41° 3. and the mean reading at 7h. 30m. p.m. was 45° 4. the mean readings at the Royal Observatory for the same times were 41° 1, and 45° 3 respectively.

† The general direction of the wind during the week has been N.N.E.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Gravency; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 18 deaths from small pox occurred at the following ages:—five under 1 year; five 1-3; two 3-5; three 5-10; one 15; and one 22; and one 33 years.

3.—Under scrofula is included “cachexia,” a male under 1 year. Under cancer “fungus hæmatodes of both orbits,” a male 4 years; and “melanosis,” a female 31 years. Under atrophy, “want of breastmilk,” a male under 1 year. Under disease of the brain, nerves, and senses, “inflammation of the eye and general exhaustion (post mort.),” a female 73 years. Under pleurisy, “empyema,” a female 37 years; and “serous and sanguineous empyema, together with tubercles of the right pleura—schirrus cancer of the liver and biliary calculi (post mort.),” a female 64 years. Under phthisis, “vomica,” 2 males aged respectively 40 and 60 years; and “typhoid fever—granular kidneys—calcareous tubercles in the lungs (p. mort.),” a female 56 years. Under peritonitis, “peritonitis (13 hours)—effusion of pus into the abdominal cavity from chronic suppuration within the fallopian tubes (p. mort.),” a female 34 years. Under ulceration of the stomach, “ulceration of the œsophagus (p. mort.),” a female 58 years; and “rupture of the stomach—two points of ulceration, one old and cicatrized, the other pervious, near the pylorus, and open to the circumference of an inch (24 hours),” post mort., a female 24 years. Under colic, “painters’ colic,” a male 50 years; and “paralysis complicated with lead colic,” a male 39 years. Under stricture of intestinal canal, “stricture of the œsophagus,” a female 67 years. Under disease of the liver, “gall stones (7 days’ illness),” a male 72 years. Under stricture, “stricture of the urethra—inflammation of the lungs and granular kidneys” (p. mort.), a male 61 years. And under disease of the kidneys, “pneumonia (10 days)—albuminuria,” a male 27 years. A male died at 90 years of age, and seven females respectively at 91, 91, 92, 94, 95, 95, and 96 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Accidental death by falling in a dock, and fracturing his head,” a male 14.
- (2) “Effects of fracture of the thigh bone by an accidental fall down stairs (7 weeks)” a female 76.

### WOUNDS:—

- (3) “Cut his throat in a state of temporary mental derangement,” a male 25.
- (4) “Suicide with a knife, after stealing riband in a linen-draper’s shop, insane at the moment of suicide,” a female 31.

### DROWNING:—

- (5) “Accidentally drowned by falling from a barge,” a male 23.
- (6) “Accidentally drowned in the River Thames,” a male 13.

- (7) “Found dead in the River Thames,” a male 35.

### HANGING and SUFFOCATION:—

- (8) Hanged himself in a temporary state of insanity,” a male 60.
- (9) Hanged himself on a yew-tree, not known if insane,” a male 70.
- (10) “Suffocation from a piece of meat falling into the larynx,” a female 42.

### BURNS:—

- (11) “Accidental death from burns, caused by her clothes taking fire,” a female 11.
- (12)\* “Accidental burn,” a female 10.

### MEANS NOT STATED:—

- (13)\* “Wilfully murdered by some person unknown,” a male newly born.

\* Nos. 12 and 13 are defective returns. In the former the circumstances of the accident, and in the latter the means by which apparently death was caused, should have been stated.

General Register Office, Tuesday, 29th April, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, April 26th, 1845.

12	Mean from 12 to 12	Mean from 12 to 12	Mean from 12 to 12

The height of the eastern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be concurrent with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The following self-registering thermometers were used: the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively; the thermometers are read.

Whevel's anemometer from the indications of which the estimation of horizontal movement is made, is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 46.6; and the mean reading at 7h. 30m. p.m. was 53.7; the mean readings at the Royal Observatory for the same times were 43.9, and 51.9 respectively.

+ The general direction of the wind during the first part of the week was N.E., and during the remainder, S.S.W.

ANNUAL SERIES.  
VI.

1845.—No. 18.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 3rd May.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

# NOTES.

1.—The 19 deaths from *small pox* occurred at the following ages:—three under 1 year; eight 1-3; two 5-10; one 17; three 20-30; and two 30-40 years.

2.—Under *scrofula* is included, “erysipelas and amputation of great toe—scrofulous ulceration—phthisis,” (*p. mort.*) a male 32 years. Under *atrophy*, “atrophy—want of breast-milk,” a male 6 weeks. Under *cephalitis*, “inflammation of the spinal marrow, (7 weeks)” a male 22 years. Under *epilepsy*, “coma,” a male 70 years. Under *disease of the brain, nerves, and senses*, “effects of acute ophthalmia following some eruptive disorder,” a male 2 years. Under *bronchitis*, “bronchitis—previously much reduced by hæmorrhage of the gums after lancing,” a male 1 year. Under *pleurisy*, “empyema (21 months)” a male 43 years. Under *disease of the lungs*, “hepatization of the lungs,” a female 62 years. Under *worms*, “infantile remittent fever,” a female 3 years. Under *hernia*, “inflammation of the bowels subsequent to operation for strangulated hernia (10 days)” a female 53 years. Under *disease of the rectum*, &c., “abscess in ano (5 months) operation,” a male 36 years. Under *disease of the liver*, “dropsy—gall-stones,” a female 48 years; and “cirrhosis,” a male 53 years. Under *disease of the kidneys*, “granular disease of the kidneys,” a female 39 years. Under *childbirth*, “exhaustion after craniotomy,” a female 22 years. Under *disease of the joints, bones, &c.*, “abscess of the chest, with necrosis of the bones,” a male 23 years. And under *disease of the skin*, “porrigo,” a female 2 months. Two males died, each at 90 years of age; and three females respectively at 90, 91, and 95 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

FRACTURES and CONTUSIONS:—	
(1) “Accidental death by a fall from a scaffold,” a male 16.	(14) “Accidentally drowned by falling from a barge,” a male 19.
(2) “Accidental fall from a plank,” a male 56.	(15) “Accidentally drowned in a pond,” a male 7.
(3) “Accidental from fractured ribs, caused by falling into the hold of a ship at the London Docks,” a male 68.	(16)* “Found dead—apparently drowned,” a male 48.
(4) “Accidental fall from a scaffold, and concussion of the brain,” a male 55.	(17)* “Found dead—apparently drowned,” a male 14.
(5)* “Natural death accelerated by a fall producing apoplexy,” a male 56.	(18)* “Found drowned—no proof by what means he came into the water,” a male supposed 35.
(6) “Accidental from a blow and crush of the abdomen, having been run over by a cart wheel at Ilford,” a male 68.	(19) “Suicide by drowning, being in a state of mental derangement,” a female 20.
(7) “Accidental death from a blow against the beam of a ship, causing inflammation of the brain,” a male 37.	HANGING and SUFFOCATION:—
(8) “Fractured leg producing delirium tremens, but how the fracture was caused unknown,” a male 49.	(20) “Executed,” a male 22.
WOUNDS:—	(21) “Suicide by hanging and suffocating himself in temporary derangement of mind,” a male 74.
(9) “Cut his throat with a knife in a state of temporary mental derangement,” a male 62.	(22) “Suicide by hanging in temporary derangement,” a female 54.
(10) “Accidentally run over by a cart, causing laceration of the leg, and locked jaw which produced death,” a female 40.	(23) “Accidentally suffocated by the pressure of her mother’s arm during sleep,” a female 3 months.
(11) “Natural death, but which may have been accelerated by a wound in her throat, caused by herself in a temporary state of insanity,” a female 56.	BURNS:—
DROWNING:—	(24) “Accidental from burns from the clothes taking fire,” a male 10.
(12) “Drowned in the River Thames by the swamping of a cutter accidentally,” a male 18.	(25) “Accidentally burnt by her clothes taking fire,” a female 5.
(13) “Drowned in the River Thames by the swamping of a cutter accidentally,” a male 24.	SWALLOWING POISON or OTHER SUBSTANCES:—
	(26) “Prussic acid taken by herself—the same to have been used as a lotion, but the bottle had by accident been wrongly labelled,” a female 22.
	(27) “Natural from decline, accelerated by his having swallowed a shilling,” a male 40.

\* Nos. 5, 16, 17 and 18 are imperfect returns, place or other circumstance being omitted.

General Register Office, Tuesday, 6th May, 1845.

ASTRONOMICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, May 3rd, 1845.*

1845 Day	Phases of the Moon	Mean height of the barometer, (corrected and reduced to 32 degrees Fahrenheit.) From 12 observations.	Readings of Thermometers										Difference between Dew Point and Air Temperature			WIND					Rain in inches, read at 9 o'clock the next morning.	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																											
			Dry		In the Water of the Thames, at Greenwich, by the self- registering Thermometer,		Lowest on the grass, by self-registering thermometer. The height of the eastern of the barometer is considered to be 120 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the aneroid. The amount of clouds is estimated, considering a clear sky to be 0, a partly cloudy sky to be 1, a slightly cloudy sky to be 2, and a cloudy sky to be 3. The observations are taken every two hours, day and night, with the exception of Sundays.

The observations are taken every two hours, day and night, with the exception of the whole sky covered with cloud. The readings of the two self-registering thermometers, the one placed in the sun and the other placed on grass fully exposed to the sky, are taken every morning at dawn, before the sun has risen to the best and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the observations are taken.

thermometers are read. Whenever the aneroid (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroid is read, the average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made

\* In reading the 15th column, it will be borne in mind that + is read "LOWER," and — is read "LOWER," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.-No. 19.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 10th May.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—The 19 deaths from *small pox* occurred at the following ages:—four under 1 year; six 1-3; three 3-5; four 5-10; one 18; and one 31 years.

2.—Under *atrophy*, is included “atrophy—want of milk for the last four months,” a female 6 months. Under *mal-formation*, “cyanosis” a male 5 months. Under *phthisis*, “phthisis with fistula in ano, (17 months),” a male 48 years; and “fistula and phthisis,” a male 29 years. Under *stricture of the intestinal canal*, “stricture of the œsophagus,” a female 63 years. Under *disease of the liver*, “cirrhosis,” a male 60 years. Under *disease of the organs of generation*, enlargement of the testicle, a male 40 years. Under *disease of the skin*, “lupus and sloughing of the nates,” a female 35 years; and “lupus,” a female 49 years. And under *privation* “found speechless and insensible, and in want of all the necessaries of life, and died in 2½ hours,” a female between 70 and 80 years. One female died at the advanced age of 91 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) “Severe injury of his chest, in consequence of a fall over the banisters of a staircase,” a male 68.
- (2) “Accidental fracture of his skull by a fall from a window,” a male 7.
- (3)\* “Dislocation of her shoulder by a fall,” a female 70.
- (4) “Accidental from falling in a passage against a door,” a female 6.
- (5)\* “Accidentally fracturing his leg by a fall from a cart,” a male 70.
- (6) “Injuring the brain by accidentally falling from a van,” a male 53.
- (7) “Killed by the wheel of a chaise passing over his head accidentally,” a male 1.
- (8) “Accidentally run over by a cabriolet,” a female 68.
- (9) “Accidental by a blow on the head by a fall from an omnibus,” a female 77.
- (10) “Accidental by a coach drawn by two horses,” a male 37.
- (11) “Accidental by a fall from a cart drawn by one horse,” a male 34.
- (12) “Blows by John Downey—manslaughter,” a male 47.
- (13)\* “Old age, accelerated by injury to the hip-joint,” a female 72.

### WOUNDS:—

- (14) “Cutting his throat in temporary insanity,” a male 59.
- (15) “Shot himself with a pistol, state of mind unknown,” a male 32.
- (16) “Injury to his throat by a piece of tobacco-pipe, being accidentally driven into it,” a male 27.

\* Nos. 3, 13, 27 and 31 are *imperfect* returns: *cause* of injury, *means*, *place*, or other circumstances ought to have been indicated.

### DROWNING:—

- (17) “Drowned by accidentally falling into the Regent's Canal while stepping from one boat to another,” a female 24.
- (18) “Drowned by the accidental tilting and sinking of an overloaded boat containing the deceased and others,” a male 30.
- (19) “Accidentally drowned in a pail of water,” a male 2.
- (20) “Found drowned in a water tub,” a female 2.
- (21) “Suicide by drowning, being at the time of unsound mind,” a male 35.

### HANGING and SUFFOCATION:—

- (22) “Hanged himself in temporary insanity,” a male 48.
- (23) “Hanged herself in a temporary state of insanity,” a female 61.
- (24) “Accidentally suffocated by inhaling the vapour of charcoal on board of a ship,” a male 17.

### BURNS and SCALDS:—

- (25) “Accidentally burned by her clothes taking fire,” a female 11.
- (26) “Accidentally burned by her clothes taking fire,” a female 12.
- (27)\* “Accidental burn,” a male 1.
- (28) “Accidentally scalded by falling into a jack-back,” a male 24.

### POISON:—

- (29) “Taking laudanum in temporary insanity,” a female about 40.
- (30) “Suicide by arsenic,” a female 35.

### MEANS NOT STATED:—

- (31)\* “Wilfully murdered,” a male newly born.

NOTES.												
1.—The 19 deaths from <i>small pox</i> occurred at the following ages:—four under 1 year; six 1-3; three 3-5; four 5-10; one 18; and one 31 years.												
2.—Under <i>atrophy</i> , is included “atrophy—want of milk for the last four months,” a female 6 months. Under <i>mal-formation</i> , “cyanosis” a male 5 months. Under <i>phthisis</i> , “phthisis with fistula in ano, (17 months),” a male 48 years; and “fistula and phthisis,” a male 29 years. Under <i>stricture of the intestinal canal</i> , “stricture of the œsophagus,” a female 63 years. Under <i>disease of the liver</i> , “cirrhosis,” a male 60 years. Under <i>disease of the organs of generation</i> , enlargement of the testicle,” a male 40 years. Under <i>disease of the skin</i> , “lupus and sloughing of the nates,” a female 35 years; and “lupus,” a female 49 years. And under <i>privation</i> “found speechless and insensible, and in want of all the necessaries of life, and died in 2½ hours,” a female between 70 and 80 years. One female died at the advanced age of 91 years.												
3.—The following are the cases of <i>death by violence</i> which appear in the present table:—												
FRACTURES and CONTUSIONS:—												
(1) “Severe injury of his chest, in consequence of a fall over the bannisters of a staircase,” a male 68.												
(2) “Accidental fracture of his skull by a fall from a window,” a male 7.												
(3)* “Dislocation of her shoulder by a fall,” a female 70.												
(4) “Accidental from falling in a passage against a door,” a female 6.												
(5) “Accidentally fracturing his leg by a fall from a cart,” a male 70.												
(6) “Injuring the brain by accidentally falling from a van,” a male 53.												
(7) “Killed by the wheel of a chaise passing over his head accidentally,” a male 1.												
(8) “Accidentally run over by a cabriolet,” a female 68.												
(9) “Accidental by a blow on the head by a fall from an omnibus,” a female 77.												
(10) “Accidental by a coach drawn by two horses,” a male 37.												
(11) “Accidental by a fall from a cart drawn by one horse,” a male 34.												
(12) “Blows by John Downey—manslaughter,” a male 47.												
(13)* “Old age, accelerated by injury to the hip-joint,” a female 72.												
WOUNDS:—												
(14) “Cutting his throat in temporary insanity,” a male 59.												
(15) “Shot himself with a pistol, state of mind unknown,” a male 32.												
(16) “Injury to his throat by a piece of tobacco-pipe, being accidentally driven into it,” a male 27.												
DROWNING:—												
(17) “Drowned by accidentally falling into the Regent’s Canal while stepping from one boat to another,” a female 24.												
(18) “Drowned by the accidental tilting and sinking of an overloaded boat containing the deceased and others,” a male 30.												
(19) “Accidentally drowned in a pail of water,” a male 2.												
(20) “Found drowned in a water tub,” a female 2.												
(21) “Suicide by drowning, being at the time of unsound mind,” a male 35.												
HANGING and SUFFOCATION:—												
(22) “Hanged himself in temporary insanity,” a male 48.												
(23) “Hanged herself in a temporary state of insanity,” a female 61.												
(24) “Accidentally suffocated by inhaling the vapour of charcoal on board of a ship,” a male 17.												
BURNS and SCALDS:—												
(25) “Accidentally burned by her clothes taking fire,” a female 11.												
(26) “Accidentally burned by her clothes taking fire,” a female 12.												
(27)* “Accidental burn,” a male 1.												
(28) “Accidentally scalded by falling into a jack-back,” a male 24.												
POISON:—												
(29) “Taking laudanum in temporary insanity,” a female about 40.												
(30) “Suicide by arsenic,” a female 35.												
MEANS NOT STATED:—												
(31)* “Wilfully murdered,” a male newly born.												

\* Nos. 3, 13, 27 and 31 are *imperfect* returns: *cause of injury, means, place*, or other circumstances ought to have been indicated.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and with partial clouding, the amount of clouds of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays.

The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

When the aneroid (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroid is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

α In reading the 12th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Drednought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.- -No. 20.

# A TABLE

OF THE

## MORTALITY IN THE METROPOLIS,

SHEWING THE

NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 17th May.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—The 21 deaths from *small pox* occurred at the following ages:—four under 1 year; seven 1-3; three 3-5; three 5-10; one 10; two 20-30; and one 47 years.

2.—Under *croup*, is included, “croup (6 days,) tracheotomy performed (5 days,)” *post mort.* a female 5 years. Under *cephalitis*, “inflammation of the spinal marrow”, a female 7 years. Under *laryngitis*, “laryngismus stridulus,” a male, 1 year. Under *disease of the heart*, “angina pectoris—disease of the heart (6 months,)” a male 53 years. Under *disease of the liver*, cirrhosis (uncertain time,) ascites and anasarca, (6 days,)” a male 42 years. Under *stone*, “calculus in the bladder, (7 years) lithotripsy—disease of the kidneys,” *post mort.* a male 61 years. Under *disease of the kidneys*, “granular kidneys,” a male 53 years; and “granular kidneys and phthisis,” a female 23 years. And under *intemperance*, “delirium tremens from 4 day’s intemperance—pneumonia of right lung commencing 28th April,” *post mort.* a male 35 years; and “delirium tremens from intemperance (13 days,) pneumonia, hepatization of both lungs,” *post mort.* a male 43 years. One male died at the age of 90 years, and five females at 90, 90, 92, 96, and 101 years. The death of the centurarian was from “natural decay,” and occurred in the upper part of Mile-end Old Town, district of Stepney.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONUSIONS:—

- (1) “Accidental fall from a ladder by which his skull was fractured,” a male 15.
- (2) “Rupture of the brain by accidentally falling down a ladder,” labourer, a male 29.
- (3)\* “Natural death which may have been accelerated by a fall,” a female 64.
- (4) “Injury to the brain by accidentally falling down stairs,” a female 79.
- (5) “Accidentally run over by a cart, while trying to stop a run-a-way horse—fracture of his skull, ribs, &c.” carman, a male 46.
- (6) “Accidentally injured by a dray-horse,” son of a baker, a male 2.
- (7)\* “Concussion of the brain,” a male 9.

### WOUNDS:—

- (8) “Erysipelas from a wound in the leg caused by the falling of a bar of iron, which struck him on the heel while at work,” a labourer or carman, a male 41.

### DROWNING:—

- (9) “Accidentally drowned by falling from a schooner,” son of a shipping-insurance broker, a male 19.
- (10) “Drowned by the accidental upsetting of a boat in the Thames,” a male 30.
- (11)\* “Found drowned,” tobacco-pipe maker, a male 47.
- (12) “Found dead in the river Thames,” labourer, a male about 50 or 60.

### BURNS and SCALDS:—

- (13) “Accidentally burnt by his clothes taking fire,” son of a labourer, a male 3.
- (14) “Accidentally burnt by his clothes taking fire,” carpenter, a male 49.
- (15) “Accidentally burnt by his clothes taking fire,” son of a bricklayer, a male 5.
- (16) “Accidentally burnt by his clothes taking fire,” son of a labourer, a male 4.
- (17) “Accidentally burnt by her clothes taking fire,” a female 46.
- (18) “Accidentally burnt by her clothes taking fire,” a female 6.
- (19) “Accidentally burnt by her clothes taking fire,” daughter of a labourer, a female 14.
- (20) “Burns received from her clothing accidentally taking fire,” (7 days) a female 4.
- (21) “Accidentally scalded by the upsetting of a kettle,” daughter of a tanner, a female 6.
- (22)\* “Mortification produced by a large scald on the chest, after lingering nearly a month,” a female 1.

### POISON:—

- (23) “Taking dill-water and syrup of poppies innocently administered,” (in whooping-cough) a female 4 months.

\* Nos. 3, 7, 11, and 22, are *defective returns*: place, cause of injury, and other circumstances should be stated in all cases, in which the facts can be ascertained.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, May 17th, 1845.

1845 Day	Phases of the Moon	Readings of Thermometers										Difference between the Dew Point Temperature			WIND			ELECTRICITY	Circumstances accompanying the evolution of F. chiefly	GENERAL REMARKS		
		Mean height of the Barometer, (corrected and reduced to from 15 (the variation) 24 degrees Fahrenheit.)										Air Temperature			General Direction	Pressure in lbs. on the square foot	Amount of Horizontal Movement of the Air in each day				Rain in inches, read at 9 o'clock the next morning	
		In the Water at Greenwich, by the self- registering thermometer, read at 6 o'clock next morning.					Lowest in the grass, as shown by a self-registering thermometer.					Least										
		High- est	Low- est	Mean	from 12 Obs.	Rise	Highest in the sun, as shown by a self-registering thermometer.	Lowest on the grass, as shown by a self-registering thermometer.	at Greenwich, by the self- registering thermometer, read at 6 o'clock next morning.	Highest	Lowest	Diff.										
MAY		In.	°	°	°	°	°	°	°	°	°	°	°	°	lbs.	lbs.	Miles					
Su. 11		29.675	54.7	45.2	49.2	13.3	72.3	35.0	51.8	51.8	5.9	17.4	0.6	-3.3	N.	0.5	0.0	0.0	125	9.0-0-06		Overcast until the evening: at 9h. p.m. the sky was nearly cloudless.
M. 12																					Rain falling heavily.	Rain was falling at 4h. a.m., and at about 10h. 30m. a.m. a very heavy shower fell. The morning was very gloomy. Overcast till 2h. p.m.: during the remainder of the day the sky was generally about one-half covered with light, cumulostratus and light clouds.
Tu. 13		29.946	57.1	44.1	49.9	12.6	78.0	40.0	51.8	51.8	7.3	14.0	3.4	-1.4	N.W.	4.0	0.1	1.6	215	7.3-0-01		Cumuli and cirrostrati were the prevailing clouds until 3h. p.m., at which time the sky was covered with cumulostrati and cirrostrati: it remained generally overcast during the remainder of the day. Occasional small rain during the evening.
W. 14	1st Quarter	30.145	58.0	44.0	50.8	14.0	83.5	26.0	52.0	52.0	6.8	11.5	2.1	+0.7	N.	2.0	0.1	0.6	85	6.8-0-01		Generally overcast until 7h. a.m.: at that time the sky N.W. with was free from cloud, but the remainder was covered with cirrostrati of unequal density. Cumulostrati and cumuli prevailed during the morning. The afternoon was cloudy, but at 7h. p.m. the clouds cleared, and the evening was clear. At 3h. 30m. p.m. a solar halo-w. halo was visible.
Th. 15		30.151	60.9	42.4	51.5	14.5	76.8	39.3	53.0	52.2	5.5	13.9	1.3	-0.4	Calm and N.	1.0	0.0	0.1	80	9.6-0-00		With the exception of breaks near the Zenith at 9h. a.m. and rather more extensive ones at 1h. p.m. the day was cloudy. A thin rain fell during the evening, but it was not of sufficient quantity to be registered by the gauge.
F. 16	In Equator	30.145	58.1	46.1	52.6	14.5	73.5	41.3	53.0	52.8	4.1	7.4	1.7	-0.4	N.	0.2	0.0	0.0	115	10.0-0-00		Overcast, without a break, during the day; the moon was however occasionally visible through the clouds between 10h. and 11h. p.m.
Sa. 17		30.013	58.0	39.8	49.6	15.2	65.7	22.4	53.8	53.0	4.4	6.8	2.1	-4.7	W. N.W. and N.	0.7	0.0	0.1	100	8.0-0-02		The sky continued overcast until at about 7h. p.m.: at that hour the Zenith and the sky for about 30° around it was clear, and the remainder of the sky was nearly covered with a thin cirrostratus; the clouds afterwards gradually became more dense, and at 9h. p.m. the clouds were visible. It continued cloudless till midnight. Rain was falling between 10. 30m. p.m. and 3h. 30m. p.m.
MEANS.		30.013	57.8	43.7	50.6	14.9	5.1	34.9	52.5	52.2	5.7	11.8	1.9	-1.6	N.				Sum 910	Sum 84.0-23		

The height of the column of the barometer is considered to be 154 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have been observed in this series of 24 hours. They are, however, placed here opposite to the level of the day which precedes that on which the thermometers are read.

Wheeler's aneroid from the indications of which the estimation of horizontal movement is made, is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the level of the day which precedes that on which the aneroid is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 15th column, it will be borne in mind that + is read "higher," and - is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N. Superintendent of the Frigate-hulk.

The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 49° 1'; and the mean reading at 7h. 30m. p.m. was 52° 3'; the mean readings at the Royal Observatory for the same times were 47° 6', and 50° 5' respectively.

† The general direction of the wind during the week has been N.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 24th May.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London *within* and *without* the Walls, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Paneras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—25 deaths from *small pox* occurred at the following ages:—seven under 1 year; three 1-3; four 3-5; six 5-10; three 10-15; and two 20-30 years. In 1 case the age is not specified.

3.—Under *atrophy* is included, 1 case of want of breastmilk, a male 5 weeks. Under malformation, “*spina bifida*,” a female under 1 year. Under *cephalitis*, “chronic disease of the ear, and inflammation of the brain,” a female 9 years. Under *phthisis*, “consumption (2 months) subsequent to fistula, abscess,” a male 23 years; and “consumption succeeding fistula—underwent operation 12 months since” a male 30 years. Under *disease of the respiratory organs*, “suffocation arising from spasm in the glottis,” a male 9 months; and “ulceration of the windpipe,” a female 75 years. Under *stone*, “stone in the bladder—operation—peritoneal inflammation supervened—died 5 days after operation,” a male 6. Under *disease of the kidneys*, “anasarca and albuminuria (8 weeks),” a male 32 years; “albuminuria—anasarca—ascites,” a female 25 years; and “extravasation of urine,” a male 51 years. Under *ovarian dropsy*, “erysipelas after tapping for ovarian dropsy,” a female 23 years. And under *disease of the skin*, “teething—eczema—diarrhœa,” a male 10 months. Two males died at the respective ages of 91 and 92 years; and two females severally at 93 years.

4.—The following are the cases of *death by violence* which appear in the present table:—

- |   |   |
|---|---|
| (1) A female 51. Widow of a cutter out of slop-clothes.<br>“Suicide by drowning in a butt of water while insane.” | (3) A female about 35. Rank or profession unknown.<br>“Drowning—not known how she came into the water.” |
| (2) A female 21. Servant (single). “Suicide by drowning,<br>state of mind unknown.”                               | (4) A female about 45. “Found drowned, but no evidence<br>by what means—no marks of violence.”          |

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the  
barometer are considered to be coincident with those of the Royal Society's flat glass standard barometer. The amount of clouds is  
estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths  
of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays.  
The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass  
fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively that  
have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the  
thermometers are read.  
Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the  
result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read,  
at his residence in the neighbourhood of Greenwich Park.  
In reading the 12th column, it will be borne in mind that + is read "LOWEN," and - is read "HIGHEN," than the average.  
The temperature of the water of the Thames is ascertained by a self-registering thermometer, suspended from the side  
of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the  
Royal Observatory for the same times were 43° 1, and 47° 7 respectively.  
† The general direction of the wind during the week has been N.

ANNUAL SERIES.  
VI.

1845.—No. 22.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES;

REGISTERED

*In the Week ending Saturday, 31st May.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS;  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:  
HARTNELL, PRINTER, RED LION COURT.

## NOTES.

1.—The 16 deaths from *small-pox*, occurred at the following ages:—four under 1 year; seven 1—3; three 3—5; one 5; and one 17 years.

2.—Under *small-pox*, is included “chicken-pox (7 days),” a male 3 weeks. Under *erysipelas* “erysipelas (3 days) following vaccination,” a female 7 months. Under *cancer*, “malignant disease of the leg—amputation above the knee—death on 14th day,” a male 27 years. Under *atrophy*, “premature birth—atrophy—not taking the breast,” a male 7 days. Under *disease of the heart*, “angina pectoris,” a female 66 years. Under *hernia*, “stoppage of the bowels (7 days); hernia strangulated, femoral, right side—operation on the 27th for an old incarcerated umbilical hernia filled with omentum only—on post. mort. examination, a small knuckle of intestine was found strangulated and mortified in femoral ring, which obesity concealed during life—chronic bronchitis—large tubercular cavity—died 28th,” a male 57 years. Under *disease of the liver*, “cirrhosis—ascites—diseased kidneys (12 months),” a female 58 years. Under *disease of the joints*, “amputation of the thigh for white swelling (31 weeks),” a female 23 years; and “necrosis of the lower jaw,” a male 43 years. And under *disease of the skin*, “red gum, 8 days,” a male 17 days. A male and a female died severally at the advanced age of 95 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1).—A male 50. “Accidental by a fall with a drunken man, by whom he was being carried—fractured skull,” (p.m.)
- (2).—A male 45, ballast heaver. “Accidental death by a fall down stairs.”
- (3).—A male 15, labourer. “Compression of the brain by accidentally falling off a ship’s gunway into a dry dock.”
- (4).—A female 75. “Effects of throwing herself from an upper window to the ground in temporary insanity.”
- (5).—A female 64. “Effects of a fractured thigh from an accidental fall.”
- (6).—A female 72. “Fracture of her skull by accidentally falling down stairs.”
- (7).—A male 25. “Injury of the spinal chord from his jumping out of a dray, when run away with.”
- (8).—A male 46. “Fracture of the cranium caused by an accidental fall from a gig while drunk.”
- (9).—A male 72. Concussion of his brain by being accidentally thrown down by a horse.”
- (10).—A male 63. “Tetanus from injury to the scalp of the head, received by falling out of a chaise accidentally.”
- (11).—A male about 50. “Concussion of the brain by the falling of a floor.”
- (12).—A female 75. “Accidental fracture of the left thigh bone.”

### WOUNDS:—

- (13).—A male 20. “The effects of a wound in his right hand.”

### DROWNING:—

- (14).—A male 37. “Suffocation from wilful suicidal submersion in the Thames.”
- (15).—A male 8. “Drowned in a tank—not known how he came therein.”

- (16).—A male 35, ballast-heaver. “Drowned by falling out of a ballast-lighter into the River Thames accidentally.”
- (17).—A female 17, servant. “Drowned herself in the River Thames.”

### HANGING and SUFFOCATION:—

- (18).—A female 76, widow of a miller. “Suicide by hanging—insane.”
- (19).—A male 43. “Hanging himself in temporary insanity.”
- (20).—A male 49, coalweigher. “Hanging—being of unsound mind.”
- (21).—A female 25. “Suicide by hanging herself with her garter to a bedpost—state of mind unknown.”
- (22).—A male 2, son of a smith and farrier. “Suffocated by a piece of pudding.”

### BURNS:—

- (23).—A female 23. “Accidentally burnt by her clothes taking fire.”
- (24).—A female 60. “Accidentally burnt by falling under the grate in a fit.”
- (25).—A female 50. “Accidental burn from the clothes catching fire at a grate while drunk.”
- (26).—A female 11. “Burns from her clothes accidentally catching fire near a grate, at which she was at play.”

### Poison, and other deleterious substances:—

- (27).—A male 26, labourer. “Accidental over draught of brandy, but not taken to destroy life.”
- (28).—A female 3. “Laudanum drunk from a cup accidentally placed within her reach.”
- (29).—A female 52. “Poisoning herself by essence of almonds—in temporary insanity.”

\* Nos. 5, 12, and 13, are imperfect returns: *place*, *cause*, and *means* of injury should be stated. In *burns* from the clothes taking fire, the *part* of dress which ignited, should be mentioned.

General Register Office, Tuesday, 3rd June, 1845.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 15 deaths from *small-pox*, occurred at the following ages:—four under 1 year; four 1—3; one 3; three 5—10; one 15; and two 20—30 years.

3.—Under *cancer*, is included “fungus hæmatodes of the antrum highmorianum (18 months),” a male 64 years. Under *tetanus*, “tetanus, (4 days) from exposure to cold and damp,” a male 8 years. Under *ulceration of intestines*, “disease of the œsophagus (ulceration), aneurism of arch of aorta, *p. mort.*” a female 53 years. Under disease of the kidneys, “hæmaturia,” a male 82 years. And under *disease of the joints*, “caries of the vertebra—angular curvature of 3d dorsal vertebra—softening of chord-abseess in the chest—erysipelas (7 days),” a male 16 years. Two males died at the respective ages of 94 and 95 years; and four females at 90, 92, 92, and 93 years.

4.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1)—A male 50, house-painter. “Exhaustion from sloughing in compound fracture of right leg from accidental fall, by breaking of a plank, on which he was at work.”
- (2)—A female 12, daughter of a tortoise-shell combmaker. “Fracture of the skull accidentally caused by a fall from a swing.”
- (3)—A male 6, son of a tailor. “Accidentally knocked down and crushed by the wheels of an omnibus, while he was crossing the road.”
- (4)\*—A male 35, inspector of police on a railway. “Accidental injury of the leg from crushing on the Birmingham Railway.”
- (5)\*—A male 19. “Serofulous abseess of the knee-joint—ununited fracture of fibula (14 weeks)”
- (6)\*—A female 78. “Contusion of the hip.”

### DROWNING:—

- (7)—A male 13, son of a grocer and dealer. “Accidentally drowned in a pond.”
- (8)—A male 12, son of a shoemaker. “Drowned by falling out of a wherry into the River Thames accidentally.”
- (9)—A male, age not stated, apprentice seaman. “Drowned by falling out of a boat into the River Thames accidentally.”
- (10)—A male 4. “Found drowned.”

### HANGING and SUFFOCATION:—

- (11)—A female 27, wife of a publican. “Suicide by hanging herself from a bed post—state of mind at the time unknown.”
- (12)—A male 4 weeks, son of a labourer. “Found dead in bed—apparently suffocated.”

\* Nos. 5 and 6 are obviously imperfect returns: *place, cause of injury, &c.* are improperly omitted. In No. 4, it should have been stated *how* the injury was caused—by a railway carriage in motion, or by what other means?

General Register Office, Tuesday, 10th June, 1845.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, June 7th, 1845.

		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)					In the Water of the Thames, at Greenwich, Thermometer read at 9 o'clock next morning					Air Temperature		General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																	
		High- est	Low- est	Mean	Dry	Dew Point	Highest in the sun, as shown by a self-register- ing thermometer	Lowest on the grass, as shown by a self-register- ing thermometer	Highest in the water, as shown by the self- registering thermometer	Mean of 19	Greatest of 19	A.M.	P.M.	Greatest	Least	Mean of 19	Obs.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		
JUNE		in.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																	

The height of the stem of the barometer is considered to be 1.59 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers were used.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read, at his residence in the neighbourhood of Greenwich Park.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made in reading the 13th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 58.4, and the mean reading at 7h. 30m. p.m. was 59.6, the mean readings at the Royal Observatory for the same times were 54.6, and 58.3 respectively.

+ The mean direction of the wind for the week has been S.W.

During the day the greater part of the sky was generally covered with detached portions of acid, and other clouds of no decided modification. The day was fine and warm.

Cumuli, and other light clouds, were prevalent until after 2h. p.m. During the afternoon the sky was nearly covered, and the clouds were of a much denser character. At midnight the sky was nearly clear.

Cirrocumuli, a few cirrostrati, and a little acid, were scattered over the sky until 11h. a.m. The sky was generally covered during the remainder of the day. Very heavy showers of rain between noon and midnight.

Generally clear till 5h. a.m.; from that time until 8h. p.m. about two-thirds of the sky was covered. It was overcast afterwards. Several showers of rain fell during the afternoon.

The sky was overcast until the afternoon; throughout the remainder of the day the amount of cloud was variable. Rain was occasionally falling.

Overcast, and rain falling until 4h. a.m.; from that time till noon the prevailing clouds were cumuli, with some cirri; the sky was generally cloudy afterwards.

About two-thirds of the sky was clear at 7h. and 8h. a.m., with that exception the sky was covered generally with clouds throughout the day. Rain was falling, and at times heavily, between 5h. 40m. p.m., and 8h. 35m. p.m.

## NOTES.

1.—The 14 deaths from *small-pox*, occurred at the following ages:—three under 1 year; three 1—3; three 3—5; two 5—10; one 14; one 15; and one 26 years.

2.—Under *hemorrhage* are included, 2 cases of epistaxis, females, 41 and 51 years. Under *atrophy* “asphyxia—debility—without breastmilk from birth,” a female 16 days. Under *malformation*, 2 cases of imperforate anus, females, 4 days and 11 days. Under *tetanus*, “idiopathic tetanus arising from cold,” a female 29 years. Under *laryngitis*, “erysipelatosore throat (2 days), oedema of glottis coming on rapidly and causing sudden death—laryngotomy performed,” *post. mort.* a male 23 years. Under *phthisis*, “phthisis 3 years—fistula 1 year,” a male 48 years, and “pneumothorax, right chest (27 days)—purulent collection in the pleura—gangrene of lung (6 days),” *post. mort.*, a male 37 years. Under *peritonitis*, “chronic peritonitis—obstruction of bowels from a band artificially formed,” a female 35 years. Under *disease of the kidneys*, “granular kidneys, and phthisis,” a male 36 years. Under *disease of the joints, bones, &c.*, “diseased knee-joint—amputation,” a male 37 years; and “caries of the palate bone,” a female 55 years. And under *disease of the skin*, “convulsions and porrigo larvalis,” a male 5 months. A man died at the age of 90 years; and of five women, one died at 91, two at 93, and two at 95 years.

3.—The following are the cases of *death by violence* which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A male 26, painter. “Accidental by a fall from the parapet of a house.”
- (2) “A male 25, baker. “Accidental by a fall from a pair of steps (step-ladder).”
- (3)\* A male 30, bootmaker. “Erysipelas after fracture of the patella, and wound of the shin, from a fall.”
- (4)\* A male 20, potman. “Accidental death by a fall in a fit.”
- (5)\* A male 45, coal and charcoal merchant. “Accidental by a fall in a state of intoxication—inflammation of the brain from a scalp-wound.”
- (6)\* A male 6. “Injury of the spine caused by a fall (6 weeks).”
- (7) A male 56, brushmaker. “Exhaustion from suppuration following erysipelas of the scalp, from an accidental fall over the landing place of some stairs, lacerating his head 3 weeks since.”
- (8) A male 2, son of a sailor. “Concussion of the brain from a fall brought on by a full state of the stomach.”
- (9) A female 57. “Accidental by a fall down stairs.”
- (10) A female 46. “Injuries of the head from falling down stairs, whether accidentally or from suddenly becoming insensible unknown.”
- (11) A male 46, horsekeeper. “Accidental by the kick of a horse.”
- (12) A male 50, traveller. “Accidental death by a fall from a cart.”
- (13) A male 16, carman. “Accidental by a cart drawn by one horse.”
- (14) A male 72, cabinet-maker. “Accidental death by a waggon and three horses.”
- (15) A male 39, coachman. “Accidental by a carriage drawn by two horses—hemorrhage from ruptured liver.” *p. mort.*

- (16) A male 27, labourer. “Accidental by an iron girder crushing and injuring the leg.”
- (17)\* A male 56. “Fractured rib.”

### WOUNDS:—

- (18) A male 35, coach-painter. “Suicide by cutting his throat with a razor, while insane.”
- (19) A male 64, Chelsea out-pensioner. “Manslaughter against Catherine Keene—erysipelas on the head and face after a scalp-wound by a tin can.”

### DROWNING:—

- (20) A male 27. “Found drowning, after which death ensued—cause not ascertained.”
- (21) A male 2, son of a labourer. “Drowned by accidentally falling into a certain watercourse whilst dipping.”

### HANGING and SUFFOCATION:—

- (22) A female 36, landress (single). “Suicide by hanging.”
- (23) A male 31, shopkeeper. “Hanged himself in a state of mental derangement.”
- (24) A male 18, butcher's boy. “Found hanging by a strap and buckle—how caused unknown.”
- (25) A male 20. “Executed.”
- (26) A female 10 months. “Accidentally suffocated in bed.”
- (27)\* A male 11 weeks, son of a toymaker. “Found dead—apparently suffocated.”
- (28)\* A female 5 months. “Found dead—accidentally suffocated.”

### BURNS and SCALDS:—

- (29) A male 4. “Accidentally burnt by his clothes taking fire, when playing with lighted paper.”
- (30) A female 7 months, daughter of a labourer. “Scalded by hot water accidentally falling on her face and neck (3 days 6 hours).”

\* In Nos. 3, 4, 5, 6, where the fall occurred should have been stated. Nos. 27 and 28: Were the children suffocated in bed, or in what circumstances were they found? No. 17 is manifestly a defective return.

General Register Office, Tuesday, 17th June, 1845.

The height of the cistern of the barometer is considered to be 1.9 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially covered by the number of tenths of the whole sky covered with cloud. The observations were taken at the Royal Observatory, Greenwich, on the 14th of June, 1845. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, at each hour every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer from the indications of which the estimation of horizontal movement is made, is read at 10 a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 13th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are repeated under the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean reading of a thermometer placed on the Royal Observatory for the same times were 57° 0, and 57° 3 respectively.

† The air has been generally calm during the week.

ANNUAL SERIES.  
VL

1845.—No. 25.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHewing THE  
NUMBER OF DEATHS FROM ALL CAUSES,

## NOTES.

1.—The 16 deaths from *small-pox*, occurred at the following ages:—two under 1 year; four 1—2; three 3—10; one 13; one 18; three 20—30; and two 30—35 years.

2.—Under *measles*, is included, “secondary fever from measles, and complicated with scrofulous inflammation of upper maxilla, and mortification of the cheek on the right side (one month),” a male 2 years. Under *hemorrhage* “epistaxis (7 days),” a female 17 years; and “hemorrhage of the nose, &c.,” a female 7 weeks. Under *malformation*, “*spina bifida*,” a male 2 months. Under *disease of the brain, nerves, and senses*, “*Convulsions and purulent ophthalmia*,” a female 4 months; and “*amaurosis, absorption of the right corpus striatum*,” a male 32 years. Under *phthisis* “*pneumothorax*,” a female 39 years; “*pneumothorax with effusion*,” a female 59 years. Under *disease of the heart*, “*anasarca—disease of the heart (dilatation), granular kidneys, post. mort.*,” a male 62 years. Under *disease of the kidneys*, “*granular kidneys—pleurisy—pneumonia—anasarca*,” a male 38 years; “*chronic albuminuria*,” a male 3 years; *dropsy* and *granular disease of the kidneys*, a male 20 years; “*ascites—anasarca—albuminuria*, ill 9 weeks,” a male 42 years; “*albuminuria and drops (2 months) erysipelas of legs (5 days), Bright's kidney*,” *p. mort.* a male 19 years; “*granular kidneys*,” a female 35 years; “*extravasation of urine*,” a male 61 years; and “*infiltration of urine*,” a male 70 years. Under *disease of the joints, bones, &c.*, “*caries of lower jaw*,” a female 51 years. Under *disease of the skin*, “*convulsions (8½ hours) produced by cœzema*,” *post mort.* a male 8 months. And under *privation*, “*fever with partial starvation*,” a male 36 years. A man died at the advanced age of 99 years; and three women at the respective ages of 93, 94, and 95 years.

3.—The following are the cases of *death by violence*, which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 25, bricklayer's labourer. “Injuries of the head by accidentally falling from a scaffold into the street while at work.”
- (2) A man 36, bricklayer. “Inflammation, &c., of the kidneys, resulting from an accidental fall from a ladder.”
- (3) A woman, 37, hotel-keeper. “Accidental by falling from the parapet of a house on fire, in attempting to reach a fire-escape.”
- (4) A woman about 57, widow of a private in the Royal Artillery. “Compression of the brain received by accidentally falling down stairs.”
- (5) A boy 11, son of a waiter. “Kick of a horse fracturing the skull while at play in a stable.”
- (6) A man 33. “Compound fracture of the bones of the right leg, 23rd December, 1844, by a cart-wheel—two amputations—diseased bone.”
- (7) A girl 7. “Accidentally run over by a cart, crushing her body.”
- (8) A man 37. “Maui—abscess of wrist-joint—secondary deposit—crushed by a cask, *p. mort.*”
- (9) A girl, newly born, daughter of a servant unmarried. “Fractures of the cranium, immediately or after birth, how caused unknown.”

### WOUNDS:—

- (10) A man 20, errand-carrier. “A wound in the throat inflicted by himself with a razor, while insane, on 11th April.”
- (11) A man 26, serjeant in the grenadier-guards. “Shot himself with his firelock, in a state of mental derangement, under the excitement of domestic causes.”
- (12) A man 67. “Venomous bite on his thumb, producing sloughing and mortal exhaustion, but by what caused unknown.”

### DROWNING:—

- (13) A man 78, labourer. “Drowned himself, state of mind unknown.”
- (14) A boy 14, son of a labourer. “Found drowned, no mark of violence, no evidence how he was drowned.”

- (15) A boy 10, son of a tailor. “Found drowned, no mark of violence, no evidence how he was drowned.”
- (16) A man 17, seaman. “Drowned by accidentally falling out of a ship's boat into the waters of the Commercial Dock.”
- (17) A man supposed about 50, unknown. “Drowned in the river Thames, no evidence by what means he came into the water.”
- (18)\* A man 20. “Accidentally drowned.”
- (19)\* A woman 60. “Accidentally drowned while intoxicated.”

### HANGING and SUFFOCATION:—

- (20) A man 36, domestic porter. “Hanged himself when in a state of temporary insanity, brought on by excessive drinking.”
- (21) A man 35, pianoforte-maker. “Suicide by hanging himself, after cutting his throat with a knife, while insane.”
- (22) A woman 23, wife of a labourer. “Suicide by hanging.”
- (23) A woman 61, wife of a coachman. “Found hanged, no evidence by what means.”
- (24) A boy newly born. “Accidentally suffocated in the soil of a privy.”
- (25) A girl 1, daughter of a warehouseman. “Asphyxia arising accidentally in taking food.”

### BURNS and SCALDS:—

- (26) A man 62, hotel keeper. “Accidentally burnt by the house taking fire.”
- (27) A woman 44, servant at an hotel. “Accidentally burnt by the house taking fire.”
- (28) A woman, age not known, servant at an hotel. “Accidentally burnt by the house taking fire.”
- (29) A woman, 56, wife of a gentleman. “Accidentally burnt by the house taking fire.”
- (30)\* A boy 1, son of a labourer. “Injuries to the chest by an accidental scald.”
- (31)\* A boy 1. “Accidental scald.”

\* Nos. 18 and 19 are imperfect returns: the river, canal, or other water, in which the persons were drowned, should have been recorded; and in the former entry, it should have been stated, *how* the accident occurred, or that there was no evidence to shew. Also in the cases of scalds, Nos. 30, 31, the circumstances of the accidents should have been stated.

*During the Week ending Saturday, June 21st, 1845.*

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer from the indications of which the estimation of horizontal movement is made<sup>a</sup> is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 15th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought, Hornet, and other ships.

ANNUAL SERIES.  
VI.

1845.—No. 26.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, 28th June.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Ten deaths by *small-pox* occurred under 15 years of age, and the remaining two at the respective ages of 38 and 49 years.

2.—Under *scrofula* is included “amputation of fore arm for scrofulous disease of carpus (6 days) gangrene of stump (2 days),” *post. mort.*, a male 21 years. Under *enteritis*, “inflammation of the bowels by absorption of lead, arising from his business” (brassfounder), a male 24 years. Under *colic*, “lead colic—syncope while at stool,” a male 30 years. Under *disease of the kidneys*, “hematuria,” a male 73 years. Under *disease of the uterus*, 2 cases of *polypus* of the womb, at the ages of 49 and 74 years. And under *privation*, “low fever, produced entirely by starvation,” a female 50 years.

3.—The following are the cases of *death by violence*, which appear in the present table:—

### FRACTURES AND CONTUSIONS:—

- (1) A man 55, bricklayer's labourer. “Injuries of the head by falling from a ladder accidentally (while ascending it) into the yard below.”
- (2)\* A boy 4, son of a Custom-house Officer. “Natural death by effusion of blood, which may have been accelerated by a fall.”
- (3)\* A woman 70. “Wound in the knee from a fall 2 years since—erysipelas (14 days).”
- (4)\* A boy 2. “Concussion of the brain, which may have been accelerated by an accidental fall.”
- (5) A boy 9. “Accidental death from a fractured skull, by a fall down a loophole.”
- (6)\* A woman 28, wife of a mariner. “Natural death, which may have been accelerated by a fall and excessive drink.”
- (7) A man 29, labourer. “Fracture of his skull by accidentally falling into a ship's hold.”
- (8) A woman 46. “Accidental death by a fall from a pair of steps, and mortal injury to the spine thereby.”
- (9)\* A boy 11, son of a printer. “Tetanus from a wound in his leg by a fall.”
- (10) A woman 33. “Accidental by falling down stairs—apoplexy caused by rupture of a blood vessel of the brain.”
- (11)\* A woman 75, wife of a shoemaker. “Inflammation of the membranes of the brain, caused by an accidental fall.”
- (12) A girl 1. “Accidental death, caused by a fall against some iron railings, producing concussion of the brain.”
- (13) A man 76. “Accidentally run over by a cart drawn by a pony—lacerated penis.”
- (14) A boy 8. “Accidental death from ruptured abdomen, caused by the wheels of an omnibus passing over him.”
- (15) A man 49, grocer. “Run over by a cab—manslaughter.”
- (16) A man about 24. “Accidental death—concussion of the brain by a fall from a horse.”
- (17) A man about 52. “Accidental by being thrown from the box of a hackney coach, drawn by two horses—fracture of the base of the skull, *post mort.*”
- (18) A man 78, shoemaker. “Rupture of his liver, caused by a carriage running against his truck.”
- (19) A girl 2, daughter of a labourer. “Accidentally run over by a cart.”
- (20) A boy 11, son of a messenger. “Injuries to his abdomen by a piece of timber accidentally falling on him.”
- (21) A man 29. “Accidental death by a blow, and fall into the waters of the East India Dock.”
- (22)\* A man 66, carpenter. “Doubtful whether from natural causes, or the effects of a fractured leg.”
- (23)\* A girl 2. “Concussion of the brain.”
- (24)\* A woman 75. “Decay of nature, accelerated by having fractured her thigh bone on the 11th May last.

### WOUNDS:—

- (25)\* A man 51, attorney's clerk. “Shooting himself in temporary insanity.”

\* Nos. 2, 3, 4, 6, 9, 11, 22, 23, and 24, are defective returns. Place or other circumstance has been improperly omitted. Nos. 29, 30, 32, and 36.—In cases of drowning the name of the river or other water should be stated, and by what means the person was submerged, or that there was no evidence to show. No. 44.—Was the child suffocated in bed, or in what other circumstances? Nos. 49 and 52 are also imperfect, especially the latter.

- (26) A man about 58, linendraper. “Cutting his throat in temporary insanity.”

- (27) A woman 58. “Cut her throat with a razor, when in a state of temporary insanity, brought on by excessive drinking.”

- (28) A woman about 46. “Hæmorrhage from the lungs, from wounds wilfully inflicted with a carving-knife by a person unknown.”

### DROWNING:—

- (29)\* A man 17. “Found drowned.”
- (30)\* A boy 11. “Accidental death from drowning.”
- (31) A man 46. “Drowned by the upsetting of a boat, how caused unknown.”
- (32)\* A man 45. “Found dead—apparently drowned.”
- (33) A boy 14, son of a coach-lace weaver. “Accidentally drowned by falling out of a boat.”
- (34) A man 30, labourer. “Accidentally drowned by falling out of a boat.”
- (35) A man 30. “Suicide by drowning in Windmill Pond, Clapham Common, in temporary insanity.”
- (36)\* A woman 46, daughter of an innkeeper. “Found dead, apparently drowned.”
- (37) A woman 49, wife of a clerk. “Drowning herself in temporary insanity.”

### HANGING and SUFFOCATION:—

- (38) A man about 45. “Hanged himself in a state of temporary insanity.”
- (39) A man about 68. “Hanged himself when in a state of temporary insanity.”
- (40) A woman 65. “Hanged herself in a state of temporary derangement.”
- (41) A woman 51. “Hanged herself in a temporary state of insanity.”
- (42) A woman 40, sempstress. “Hanged herself to a bed-post in a temporary state of insanity.”
- (43) A boy 7 months. “Accidentally suffocated in bed.”
- (44)\* A girl 5 weeks, daughter of a jeweller. “Found dead, apparently suffocated.”

### BURNS and SCALDS:—

- (45) A man 18. “Accidental death by his clothes taking fire.”
- (46) A boy 7, son of a labourer. “Accidentally burnt by his clothes taking fire.”
- (47) A boy 3, son of a lead-smelter. “Accidentally burnt by his clothes taking fire.”
- (48) A girl 13. “Accidental death from her clothes taking fire.”
- (49)\* A girl 3. “Accidental death from scalds.”

### POISON:—

- (50) A man 40. “Overdose of opium accidentally taken.”
- (51) A boy 13, son of a hair-dresser. “Death from essential oil of almonds imbued into the stomach, but how or by whom no satisfactory evidence appeared.”

### MEANS NOT STATED:—

- (52)\* A woman 23. “Malapraxia—manslaughter.”

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, June 28th, 1845.

The height of the eistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The reading of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the evil day which precedes that on which the thermometer's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the evil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 14th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

† The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Breadthright Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Breadthright. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 57° 3; and the mean reading at 7h. 30m. p.m. was 61° 1. The mean readings at the Royal Observatory for the same times were 56° 6, and 59° 3, respectively.

‡ The MEAN direction of the wind for the week is West.

A TABLE  
OF THE  
**MORTALITY IN THE METROPOLIS,**

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, 5th July.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—One person died of *small-pox* at the age of 21 years, and the remaining six under 10 years.

2.—Under *small-pox*, is included "chicken-pox (1 month), hooping-cough (1 week)," a female 11 months. Under *atrophy*, three cases of want of breast-milk, 2 males aged respectively 5 weeks, and 4 months; and a female 4 weeks. Under *anæmia*, "atrophy for want of the breast—having a hare lip," a female 4 months. Under *peritonitis*, "peritonitis—a substance similar to a bean was found in the right iliac fossa, the vermiform process ulcerated and inflamed, extending along the ilium (*post mort.*)," a male 11 years. Under *disease of the stomach*, "dyspepsia (4 years)," a female 62 years. Under *disease of the kidneys*, "albuminuria, epilepsy, ill 3 months," a male 22 years; and "granular kidneys—cavity in the left lung," a female 19 years. And under *intemperance*, "natural extravasation of blood on the brain—incessantly drunk for three months," a female 24 years. Two men died at the advanced ages of 90 and 96 years, and a woman at 91 years.

3.—The following are the cases of death by violence which appear in the present table:—

## FRACTURES and CONTUSIONS:—

- (1) A boy 5 months. "A blow on the head from accidentally falling out of bed two hours before—being found dead."
- (2)\* A man 46, ostler. "Accidental from fractured ribs caused by a fall."
- (3)\* A girl 3, daughter of a carpenter. "Accidental fall and cut on her head."
- (4)\* A man 20. "Accidental death by a fall."
- (5) A girl 1. "Injuries to the head by an accidental fall from a hay loft into a mews while at play."
- (6) A girl 7, daughter of a policeman. "Fracture of the head by an accidental fall from a loft."
- (7) A man 17, plasterer. "Accidental from a fractured skull caused by the fall of a scaffold pole."
- (8) A man 39, labourer. "Accidental from a ruptured liver, caused by the fall of a derrick upon his back, whilst leaning on a rail."
- (9) A man 36. "Accidental death from a blow on the head by the fall of a cask."
- (10) A woman 21. "Accidental death by a blow from a chair."
- (11) A man 50, carman, "Accidental from fractured leg by kicks from a horse."
- (12) A man 36, waggoner, "Accidental from a fractured leg by a waggon wheel."
- (13) A boy 2, "Injuries to the right kneejoint from having been crushed by a cart wheel."
- (14) A boy 12, "Injuries of the head from the uptilting of a cart, accidentally, in which he was at play."
- (15) A man 32, book-carrier, attached to one of Pickford's vans, "Hæmorrhage into the abdomen from accidental rupture of the liver by crushing between two waggons on a railway train, while there at work."
- (16) A man 48, labourer, "Accidental from a blow by a winch, causing a fracture of his skull."
- (17) A boy 9, son of a labourer, "Accidental blow on the head, by a pump-handle worked by another person."
- (18) A man 60, machine-maker, "Accidental from a finger jammed between two wheels."
- (19) A man 33. "Accidental from a compound fracture of the right thigh, occasioned by slipping into the moving machinery of a steam-engine, when on board of a steam-boat."
- (20) A man 55, ship's cook, "Fractured skull, bladebone and leg—but how caused not ascertained."

## WOUNDS:—

- (21) A man 78, labourer. "Suicide—cut his throat, being at the time of unsound mind."

## DROWNING:—

- (22) A man 22, solicitor's clerk. "Accidentally drowned by falling into the water of a certain bath, being seized with illness." (National Bath, Westminster Road.)
- (23) A man 19, analytical chemist. "Accidentally drowned in the River Thames, a boat in which he was, coming into collision with a steam-boat."
- (24)\* A boy 14, son of a labourer. "Accidentally drowned in bathing."
- (25) A man 22, lighterman. "Accidentally drowned by falling from a barge."
- (26) A man 44, shoemaker. "Found dead in the Paddington Canal—suicide."
- (27)\* A man supposed about 47, rank or profession unknown. "Drowned—no evidence by what means."
- (28)\* A man 18. "Accidentally drowned."
- (29)\* A man 50. "Found dead—apparently drowned."
- (30)\* A boy 15. "Found drowned."

## HANGING and SUFFOCATION:—

- (31) A man 42. "Suicide by hanging while insane—an habitual drunkard."
- (32) A girl 7 months. "Found dead in bed, apparently suffocated without marks of violence."

## BURNS and SCALDS:—

- (33) A boy 4, son of a weaver. "Accidentally burnt by his clothes taking fire."
- (34) A man about 64. "Accidentally burnt by his clothes taking fire, while in a fit."
- (35)\* A boy 2, son of a tailor. "Accidental from burns."
- (36)\* A woman 26. "Accidental from burns."
- (37) A boy 2, son of a woodcutter. "Accidental from scalding by boiling water imbibed from a tea-kettle."

## POISON:—

- (38) A man 21, apprentice-hatter. "Arsenic taken by himself, labouring under temporary derangement."

\* Nos. 2, 3, 4, 24, 27, 28, 29, and 30, are imperfect returns, *place, name of water, &c.*, being improperly omitted. In Nos 35 and 36, it should have been stated *how* the burns were caused. By the clothes taking fire, or by what other means?

General Register Office, Tuesday, 8th July, 1845.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, July 5th, 1845.

1846 Day	Phases of the Moon	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature				WIND				ELECTRICITY		Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS			
		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit)		Dry		Dew Point		In the Water of the Thames, by the self- registering Thermometer, read at 9 o'clock next morning		Lowest in the grass, as shown by a self-register- ing Thermometer		Highest in the sun, as shown by a self-register- ing Thermometer		Air Temperature		General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day				Rain in inches, read at 9 o'clock the next morning	Mean Amount of Cloud, 0-10

The height of the cistern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by a scale from 0 to 10, 0 being clear sky, 10 being a sky completely overcast. The observations are taken by the observer, who is placed in the room, and the two self-registering thermometers, the one placed in the room, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 15th column, it will be borne in mind that + is read "plus" and - is read "minus" than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Drednought. The mean readings of the thermometer on the mast are omitted, the evening readings being manifestly incorrect on several of the days. It is probable that the thermometer was exposed to the sun, or to some other disturbing influence.

† The mean direction of the wind for the week is S.S.W.

Circumstances, cumuli, and ead, were the prevailing clouds. At about 3h. 20m. p.m. a shower of rain fell, and a fine double rainbow was visible.

The clouds were broken about noon, and also shortly before midnight; at every other time the sky was overcast. Occasional rain during the morning.

Overcast until after noon; during the afternoon and evening cumuli and light clouds prevailed, and the wind was blowing during the latter part of the day in very strong gusts.

The amount of cloud was continually changing during the early part of the morning. At 10 A.M. the sky was overcast with drooping clouds, and at 11 A.M. it was nearly clear. A steady rain was falling during the afternoon.

Overcast until 4h. a.m., and also at noon; during every other part of the day the sky was nearly clear. Shortly after 8h. a.m. several heavy peals of thunder were heard, and the air at that time was exceedingly oppressive. An extraordinary great deposition of moisture took place this morning, within the hour of the meteorological observations; and at 9h. a.m. the Dew Point was 70°. Showers of rain during the morning.

The sky was nearly overcast until noon; during the afternoon cumuli and light clouds prevailed, and in the evening it was overcast. Rain was falling at midnight.

Nearly overcast at 1h. a.m.; at 3h. a.m. the sky was cloudless for a short time, the remainder of the morning the amount of cloud was variable. During the afternoon the sky was overcast. At 5h. p.m. a fine solar halo was visible; at midnight the sky was perfect, and the prismatic colours were vividly shown; at 3h. 30m. a very bright mock sun was seen about 2h. to the E. of the true sun. The semi-diameter of the halo was 22°. The halo had quite disappeared at 5h. 30m.

# A TABLE

OF THE

## MORTALITY IN THE METROPOLIS,

SHEWING THE

NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 12th July.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—The 13 deaths from small-pox occurred under the age of 10 years.

3.—Under small-pox is included, “chicken-pox, the vesicles becoming large sloughs,” a male 10 months. Under thrush, “want of breastmilk—thrush (12 days),” a female 6 weeks. Under diarrhoea, “convulsions (2 days), diarrhoea (7 days) without breastmilk from birth,” a male 8 weeks. Under hæmorrhage, “hæmorrhage from the posterior nares,” a male 6 weeks. Under atrophy, 2 cases of “atrophy from want of breastmilk,” females aged respectively 21 days, and 3 months. Under malformation, “spina bifida,” a male 2 days. Under disease of the brain, &c., “disease of the spinal marrow—paralysis (4 months),” a female 26 years. Under disease of the heart, “angina pectoris (4 months),” a male 60 years. And under disease of the kidneys, “albuminuria (21 days),” a female 19 years. A man died at the age of 92 years; and five women at 91, 91, 92, 93, and 97 years.

4.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A male, age not stated. “Injuries on the chest from being accidentally run over by a cart.”
- (2) A man 22, carman. “Accidentally killed by a fall from a cart—dislocation of the vertebræ of his neck.”
- (3) A man 37, carman. “Killed by the rear wheel of a certain waggon passing over his head accidentally.”

### WOUNDS:—

- (4) A man 31. “Suicide by cutting his throat, being of unsound mind.”
- (5) A woman 63. “Erysipelas occasioned by a wound in the leg 2 years since.”

### DROWNING:—

- (6) A boy 3. “Accidentally drowned in a pond in a garden.”
- (7) A boy 6, son of a gunmaker. “Accidentally drowned by slipping into a pond.”
- (8) A man 16, son of a sailmaker. “Accidentally drowned whilst bathing in the River Thames.”

- (9) A woman 36, widow, living with an unmarried man. “Effusion on the brain; the combined effects of drunkenness and drowning whilst in a state of temporary insanity.”

- (10) A man 38, small farmer. “Suffocated and drowned himself in the water of a pail, being at the time insane.”
- (11) A man about 36. “Drowned in the water of a ditch—by what means he came there no evidence.”

- (12) A male, age, rank and profession unknown. “Found drowned in the River Thames—by what means no proof.”

### HANGING and SUFFOCATION:—

- (13) A man 82. “Hanged himself in a temporary state of insanity.”
- (14) A woman 69, widow of a rag-dealer. “Hanged herself in a temporary state of derangement.”
- (15) A girl 5 weeks, daughter of a licensed victualler. “Accidentally suffocated at the breast of her mother, while asleep in bed.”
- (16) A girl about 30 hours. “Wilfully murdered by some person or persons unknown—suffocation by compression of the mouth.”

\* No. 3 is an imperfect return: the cause of the wound, place, and instrument by which it was inflicted, should have been stated. In No. 9, the name of the river or other water in which the woman was submerged is improperly omitted.

General Register Office, Tuesday, 15th July, 1845.

The height of the barometer is considered to be 1.00 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, considering a clear sky to be represented by 0, a cloudy sky by 1, and when partially cloudy, estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sunday, when the readings are taken only once, at 9 o'clock, in the day, and at 9 o'clock, at night, and are recorded in the following manner: The readings of the barometer are recorded in the first column, and the readings of the thermometer in the second column. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer from the indication of which the estimation of horizontal movement is made is read at 10 A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher," and - is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read every day at 7h. 30m. a.m., was 59°6; the mean reading at 7h. 30m. p.m. was 59°6; the mean readings at the Royal Observatory for the same times were 58°4, and 58°3 respectively.

† The mean direction of the wind for the week was S.W.

FRIDAY.

Thunder showers.

Neutral and weak from 10h. 10m. p.m. to 1h. 30m. p.m.

Positive and moderately active between 1h. 30m. p.m. and 1h. 30m. p.m.

From 9h. a.m. till noon, there were extensive breaks in all directions, but the wind was generally covered with cirrostratus and acid during the day, and several showers of rain fell.

During the latter part of the evening the clouds dispersed for a short time; with the exception of the sky was overcast during the day. At 10h. p.m. rain fell for some time.

The sky was generally covered with cirrostratus and acid during the day, and several showers of rain fell.

Overcast until noon; during the afternoon and evening the sky was nearly clear, the few clouds being chiefly cirri. The afternoon was very fine; the wind kept the temperature comparatively low, for such a fine day, and prevented the air from being oppressive.

The lightning continued visible until 4h. a.m.; at that time a loud rumbling of thunder was heard, and rain began to fall heavily; it ceased again in about a quarter of an hour. During the remainder of the day, light clouds prevailed. From 10h. p.m. until midnight about lightning was again visible in the S.E.

The sky, until about noon, was generally covered with cumuli and acid; at noon the clouds dispersed, and none were visible during the afternoon. About 9h. p.m. a large white cumulus appeared in the S., and passed off in the S.E.; from behind this cloud flashes of short lightning were visible at intervals of about a minute until midnight. The day was a very fine, and this a hot day.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 19th July.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—Under *diarrhœa* is included "atrophy, diarrhœa, want of breastmilk (2 weeks)" a female aged 20 days. Under *typhus* (for the sake of convenience), "mumps," a female 1 year. Under *atrophy*, "atrophy, want of milk," a female 10 weeks; and "debility without breastmilk from birth, except the first three weeks," a female 5 months. Under *malformation*, "harelip, inanition produced by difficulty of taking food," a female 7 weeks. Under *convulsions*, "convulsions without breastmilk from birth," a male 5 weeks. Under *laryngitis*, "laryngismus stridulus," a female 6 months. Under *phthisis*, "consumption, produced by change of climate," a male 5 years. Under *disease of the heart*, "hypertrophy and dilatation of the heart—granular degeneration of the kidneys—anasarca, ascites, and hydrothorax—pulmonary apoplexy—senile gangrene (period indefinite)," a female 58 years. Under *tabes mesenterica*, "affection of the mesenteric glands, aggravated by double harelip," a female 4 months. Under *hepatitis*, "hepatitis—anasarca—albuminuria—bronchitis (ill 1 year)," a male 40 years. And under *disease of the kidneys*, "hæmaturia—albuminuria, ill 3 months," a male 25 years; "Bright's disease—dropsy," a male 35 years; and "granular disease of the kidneys and bedsores," a female 35 years. Two women died at the respective ages of 90 and 94 years; and a third in the district of St. George in the East, at the advanced age of 101 years and 4 months.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 45, house-painter. "Disease of the brain, lung, kidneys, and bladder, accelerated by an accidental fall from a ladder, occasioning fracture of the left thigh."
- (2) A man 40, bricklayer. "Delirium tremens, occasioned by a fall from a scaffold."
- (3)\* A woman 65. "Disease of the kidneys, and sinking—neck of thighbone fractured from having been pushed down three months since."
- (4) A girl 6, daughter of a coalheaver. "Tetanic spasms, resulting from a broken arm, occasioned by a fall from some palings."
- (5) A man 20. "Killed by the falling of a certain iron fence upon his head accidentally."
- (6) A boy 13, son of a carpenter. "Injuries by being accidentally run over by a fly."
- (7) A girl 15, servant. "Head accidentally crushed by a cart-wheel."
- (8) A man 36, servant to a railway company. "Inflammation of the veins, resulting from an injury by a railway engine."
- (9) A man 29, brewer's servant. "Erysipelas and pleurisy brought on by an accidental injury to the hand, from its being jammed between a cask and a wall."
- (10)\* A man 35, sawyer. "Rupture of his bladder from blows on his belly."
- (11)\* A girl 2. "Concussion of the brain."

### WOUNDS:—

- (12) A man 26, apprentice to a shoemaker. "Cutting his throat, being at the time in a state of temporary derangement."
- (13) A man 33, master-mariner. "Shot himself with a pistol in the side, in a temporary state of insanity."

### DROWNING:—

- (14) A man 20, son of a victualler and boat-builder. "Accidentally drowned in the Thames by the sinking of a barge overlaid with rubbish, the deceased having gone on board to render assistance."

- (15) A man 29. "Drowned accidentally while bathing in the Surrey Canal."
- (16) A man 24, pianoforte-key maker. "Accidentally drowned when bathing in the Thames."
- (17) A man 26.\* "Accidentally drowned while bathing."
- (18) A boy 15. "Drowned in the Surrey Canal by accidentally falling therein, off some floating timber."
- (19) A man 34, designer of patterns. "Found drowned in the River Thames—how unknown."

### HANGING and SUFFOCATION:—

- (20) A man 54, copper-plate printer. "Suicide by hanging—insane."
- (21) A man 18. "Suicide—hanged himself being in a state of temporary mental derangement."
- (22) A boy 5 months. "Accidentally suffocated in bed."

### BURNS:—

- (23) A boy 2, son of a sacking-weaver. "Accidentally burnt by his clothes taking fire."
- (24) A boy 3. "Burns received by his clothes accidentally taking fire."
- (25) A woman 18. "Burns by her clothes accidentally taking fire while sitting close to a grate."
- (26) A girl 8. "Accidentally burnt by the clothes taking fire from a lighted candle."

### LIGHTNING:—

- (27) A man 46. "A stroke of lightning in the Finchley Road—lived 14 hours—symptoms like the stupor of apoplexy—no morbid appearance found in any cavity of the body." The Registrar of the district adds that "there were two slight burns discoverable on the inner side of the forearm."

### POISON:—

- (28) A man about 50, tea-dealer. "Taking laudanum in temporary insanity."

\* In No. 3 the place where the person fell should have been stated—On the street, in a dwelling-house? No. 10 should have indicated by whom, and with what instrument the blows were inflicted. In No. 17 should have been included the name of the river or other water. No. 11 is obviously a defective return.

General Register Office, Tuesday, 22nd July, 1845.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, July 19th, 1845.

1845 Day	Phase of the Moon	Readings of Thermometers										Difference between the Air and Surface Temperature		WIND				Rain in inches, read at 9 o'clock	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS	
		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit)	Dry				In the Water at Greenwich, (corrected and reduced to 32 degrees Fahrenheit)		Lowest shown by a self-register- ing thermometer.	Highest shown by a self-register- ing thermometer.	Air Temperature		General Direction	Pressure in the foot			Amount of Horizontal Movement of the Air in each day					
			High- est	Low- est	Mean	Wet- test	Highest	Lowest			Mean	of 19		Diff.	W.S.W. and Calm	W.S.W. and Calm						lbs.

At 7h. p.m. a part of a solar halo was visible, and between 7h. and 7h. 17m. a fine mock sun was visible.
M. 14		29.813	64.0	63.7	58.7	53.2	83.4	42.8	63.0	63.0	63.0	63.0	63.0	W.S.W. and N.W.	W.S.W. and Calm	3.4	0.1	0.4	80	8.9	0.0	Overcast with the exception of slight breaks in the clouds at 3h. a.m., and between 4h. and 6h. p.m.; occasional showers of rain.
Tu. 15		29.944	60.0	49.8	55.0	48.9	78.5	37.6	62.8	62.5	6.1	14.6	1.0	Calm and N.	Calm and N.	4.0	0.0	0.1	50	9.1	0.0	Overcast throughout the day, excepting slight breaks at 3h. a.m., at noon, and at 6h. p.m.; occasional thin rain falling.
W. 16	Greatest Declination S.	29.912	69.3	47.9	58.0	50.1	96.7	49.3	62.8	62.2	7.9	16.5	1.5	W.S.W. and N.W.	W.S.W. and N.W.	0.3	0.1	0.1	85	5.7	0.0	The clouds suddenly became much broken before midnight, and from that time to 10h. a.m. the sky was never more than half covered by clouds, but more frequently by a much less quantity; after 10h. a.m. the quantity of clouds increased, and the sky was always more than half covered during the remainder of the day.
Th. 17		29.881	70.0	55.3	61.5	56.4	87.2	50.0	63.0	63.0	5.1	13.0	1.4	S.S.W.	S.S.W.	1.5	0.1	0.2	120	9.1	0.1	Overcast with generally a thin rain falling till 6h. p.m.; from 6h. to 6h. the clouds were broken, and the sky was overcast afterward.
F. 18	Perigee	29.908	71.0	55.0	62.8	56.4	111.6	41.3	64.2	63.2	6.4	12.9	1.4	W.S.W. and Calm	W.S.W. and Calm	0.3	0.0	0.0	35	7.3	0.0	Overcast till noon, and from that time till 6h. but few clouds prevailed; after 6h. about three-fourths of the sky were covered by clouds.
Sa. 19	Full	29.935	73.0	51.2	61.7	55.4	107.0	42.0	65.0	64.0	6.3	13.0	0.2	Calm	Calm	0.5	0.0	0.1	95	2.9	0.0	At midnight about one-half of the sky was covered by cloud, and after this time till noon the sky was nearly cloudless; from noon to midnight the sky was again covered by clouds covering the whole sky, and at other times only one-tenth part of the sky.
MEANS.		29.909	68.0	52.2	59.6	53.4	92.9	44.7	63.1	63.0	6.2	13.2	1.0	+ W.					Sum	8.5	0.29	

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 10, a cloudy sky by 10, and when partially cloudy, by estimating the number of tenths of the sky covered by clouds. The readings of the sky are taken every two hours, day and night, with the exception of Sundays. The readings of the sky are taken every morning at 9h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer from the indications of which the estimation of horizontal movement is made is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 10th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. p.m., was 61° 38', and the mean reading at 7h. 30m. p.m. was 61° 18', the mean readings at the Royal Observatory for the same times were 64° 40', and 60° 40', respectively.

† The MEAN direction of the wind for the week is W.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, 26th July.*

## NOTES.

1.—Under *diarrhœa* is included “atrophy from want of breastmilk—*diarrhœa* (9 days)” a female aged 9 weeks. Under *purpura*, “*scurvy*,” a male 6 weeks. Under *scrofula*, “*cachexia*,” a male 26 years. Under *atrophy*, “*exhaustion*, not having had breastmilk,” a female 1 month. Under *malformation*, “*imperforate anus*,” a female 5 days. Under *phthisis*, “*hectic fever*,” a male 62 years; “*consumption—not allowed breastmilk by day after the first month*,” a female 5 months; and “*phthisis—pneumothorax*,” a female 6 years. Under *worms*, “*infantile remittent fever*,” a female 6 years. Under *disease of the digestive organs*, “*pyrosis*,” a male 45 years. Under *disease of the liver*, “*cirrhosis of the liver* (duration uncertain), *anasarca*, *ascites*, and *icterus* (duration 12 days),” a male 54 years. Under *disease of the kidneys*, “*granular kidneys and dropsy*,” a male 29 years; and “*Bright’s disease of the kidneys*,” a male 38 years. Under *disease of the joints, bones, &c.*, “*disease of left knee-joint—amputation above the knee—enlarged inguinal gland, left side, as large as a goose’s egg (p.m.)*,” a female 19 years; and “*caries of the toe* (3 months), *erysipelas* (82 hours), *synovitis of both knee-joints*, left wrist, congestion of lungs,” *post mort.*, a male 53 years. And under *disease of the skin*, “*impetigo scabida* (1 month’s duration),” a female 6 weeks.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1)\* A woman 76. “Old age and injury from broken leg.”
- (2)\* A boy 3, son of an engineer. “Concussion of the brain (5 days), cephalitis (4 days).”

### WOUNDS:—

- (3) A man 29, clerk to a brickmaker. “Accidentally shot in the head with a gun, while reaching it to shoot birds—instant death.”
- (4) A man 30, surgeon. “Suicide by a punctured wound of the heart, being at the time of unsound mind.”

### DROWNING:—

- (5) A male, age unknown. “Found dead, supposed to have been drowned in Regent’s Canal basin.”
- (6) A man 39, labourer. “Drowned in the Commercial Dock by falling from the bow of a ship accidentally.”
- (7) A man about 20. “Found dead in the River Thames; no marks of violence.”

### BURNS:—

- (8) A girl 14. “Accidentally burnt by her clothes taking fire, when playing with lucifer matches.”

### POISON:—

- (9) A boy 5 weeks, son of an Italian oil-warehouseman. “Poisoning with an over-dose of syrup of poppies—quantity not proved—given as a medicine by John Stanley, M.B., Trinity College, Dublin—lived 17 hours.”
- (10) A woman 19. “Poisoned by arsenic, but no evidence how it was taken.”

### NEGLECT:—

- (11) A boy newly-born (parents unknown). “Wilfully murdered by neglect at birth—no medical aid—persons guilty unknown.”

### MEANS NOT STATED:—

- (12)\* A girl, newly-born (parents unknown). “Wilfully murdered by some person or persons unknown.”

\* Nos. 1 and 2 are defective returns: *place* and *cause* of injury are improperly omitted. In No. 12 the *means* which apparently had been employed to produce death, should have been stated.

General Register Office, Tuesday, 29th July, 1845.

*During the Week ending Saturday, July 26th, 1845.*

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the wind, are taken every morning at 6h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's aneroidometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroidometer is read. The average Temperature for 95 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observation made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Paneras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—Under *thrush* is included “aphthæ and want of breastmilk (5 weeks),” a female 9 weeks. Under *typhus* (for the sake of convenience) 2 cases of “mumps,” a male 5 years, and a female 1 year. Under *purpura* “scurvy—abscess in the neck (1 month), erysipelas of the neck and head (13 days),” a male 53 years. Under *scrofula* “scrofulous disease of knee-joint (3 years), amputation of the thigh—death from exhaustion 1 month after operation,” a male 23 years. Under *atrophy* 5 cases of “atrophy from want of breastmilk,” 3 males aged respectively 6 weeks, 2 months, and 5 months; and 2 females aged 2 months, and 9 weeks. Under *phthisis*, “phthisis laryngitis (2 years),” a male 36 years, and “phthisis pulmonalis, and granular disease of the kidneys,” a male 62 years. Under *disease of the respiratory organs*, “aphonia,” a male 7 months. Under *stricture of intestinal canal &c.* “stricture of the œsophagus (16 years),” a male 72 years. Under *disease of the digestive organs*, “protracted indigestion with severe lepra, and copious secretion of oxalic acid from the kidney,” a female 31 years. Under *disease of the liver*, “cirrhosis of the liver,” a male 38 years. Under *disease of the kidneys*, “granular disease of the kidneys,” *post mort.* a female 49 years; and “morbus Brightii and dropsy,” a female 69 years. Under *disease of the joints, bones, &c.* “lumbar abscess—caries of vertebra—pulmonary consumption,” *post mort.* a female 41 years; and “abscess, with caries of 9th and 10th ribs,” *post mort.* a male 44 years. And under *privation*, “gradual exhaustion, whether from natural disease or want of sufficient food through neglect of the parents, not sufficient evidence to prove,” a male 10 months. Two men died at the advanced ages of 90 and 91 years.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES AND CONTUSIONS :—

- (1) A boy 7 months. “Pressure of the brain by an accidental fall from a bed on the 27th of July, producing effusion of blood within the skull.”
- (2) A man 16. “Accidental death by a fall from the mast-head of a ship.”
- (3) A woman 47. “Injury to the spinal marrow, occasioned by a fall from the top of the Millbank prison wall, opposite the prison—3rd day.”
- (4) A boy 3. “Accidentally run over by an omnibus.”
- (5) A boy 13, son of a brickmaker. “Inflammation of the peritoneum terminating in abscess into the lungs, caused by blows on the belly wilfully, but not maliciously inflicted by his father Charles Chalk the younger.”
- (6) A boy 15 minutes. “Accidental compression of the brain at birth.”

### DROWNING :—

- (7) A man 22. “Accidentally drowned from a boat, by falling into the Thames in Blackwall Reach.”

- (8) A boy 11. “Accidentally drowned in the Thames, by falling from a boat at Rotherhithe, Surrey.”
- (9) A man 24. “Accidentally drowned in the Thames, off Woolwich.”
- (10) A man, age not known. “Found dead, June 16th, in the Thames, off Woolwich, supposed from drowning.”

### HANGING :—

- (11) A man 43, painter and paper-hanger. “Hanged himself, while insane.”
- (12) A man 20. “Hanged himself in a station-house cell, but in what state of mind no evidence appeared.”
- (13) A man 20, tailor. “Hanged himself in a temporary state of insanity.”
- (14) A woman 38. “Hanged herself in a temporary state of derangement, with her apron fastened round a pipe and her own neck.”

### POISON :—

- (15) A man 63. “Essential oil of almonds, whether swallowed accidentally or not, unknown.”

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
*During the Week ending Saturday, August 2nd, 1845.*

[illegible]

The height of the stem of the barometer is considered to be 1.9 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 5h. A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here to show the full range of the readings to which the thermometers are read. The thermometer placed in the *full rays of the sun* is at present away for rectification. Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M. and the result given for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

Its reading in the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the

ANNUAL SERIES.  
VI.

1845.—No. 32.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 9th August.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under *atrophy* is included, "atrophy produced by dry nursing," a female aged 6 months. Under *malformation*, "imperforate anus," a female 2 days. Under *chorea*, "Chorea—brain; spinal cord and thin membranes healthy—sharp serrated ridges and spiculae of bone in the base of the cranium," a male 18 years. Under *disease of the brain, nerves and senses*, "amaurosis (18 months)," a male 66 years. Under *phthisis*, "empyema—tubercles on left lung," a male 42 years. Under *disease of the heart*, "angina pectoris," a female 55 years. Under *worms*, "infantile remittent fever," a male 1 year; and "infantile fever (6 weeks)," a female 5 years. And under *disease of the digestive organs*, "disease of bowels and want of breastmilk," a female 5 weeks. Four women died at the age of 90 years, and one at 97 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 38, dealer in old iron and other goods. "Injury of the spine. Struck by a cart-shaft, while guiding the horse through a gateway,—not sober—lived half-an-hour."
- (2) A girl 4. "Fracture of the skull from being accidentally crushed by a cart-wheel, while at play on the open road."
- (3) A man 52, coachman. "Lockjaw from the kick of a horse received accidentally."
- (4) A man 31. "Compression of the brain, with laceration, received from being accidentally thrown down, having taken hold of the wheel of a cart when in motion."—*Post mort.*
- (5) A girl 1. "Accidental death from a blow on the head by a fall from a window."
- (6)\* A man 55. "Fractured ribs and ruptured spleen; the result of an accidental fall."
- (7)\* A man 10. "Concussion of the brain, received by accidentally falling to the ground backwards."
- (8)\* A man 71. "Injuries to the spine from an accidental fall."
- (9) A man 52, carpenter. "Effusion on the brain following a blow from a brick, which fell from a hod upon his head six days previously, while on a scaffold."
- (10)\* A boy 10. "Injuries to the head from being accidentally crushed."
- (11)\* A boy about 15. "Abscess of the brain; the result of an accidental fracture of the skull."
- (12)\* A man about 31. "Erysipelas following injuries accidentally received in the thigh."
- (13)\* A man 63. "Phlegmonous erysipelas from injuries accidentally received; compound fracture of right tibia and fibula."—*Post mort.*
- (14)\* A man 10. "Injuries to the head from being accidentally crushed."

### WOUNDS:—

- (15) A man 45. "Suicide by cutting his throat with a razor; had laboured under a bilious attack for three weeks; no evidence of insanity."
- (16) A man 45, waiter at a tavern. "Suicide by cutting his throat, being of unsound mind."
- (17) A boy 8 months. "Cut throat—wilful murder."

### DROWNING:—

- (18)\* A man 32, lighterman. "Accidentally drowned by falling from a barge."
- (19)\* A boy 10. "Accidentally drowned by falling from a barge."
- (20)\* A girl 13. "Accidentally drowned by falling from a barge."
- (21) A boy 11, son of a weaver. "Found dead in the Regent's Canal" (supposed to be suicide).
- (22)\* A male, age unknown, rank or profession unknown. "Found dead, apparently drowned."

\* Nos. 6, 7, and 8, are imperfect returns of falls. It should have been stated whether on the street, from a window, from a scaffold, &c. It is obvious that Nos. 10, 11, 12, 13, and 14, are defective, cause of injury and place being omitted, should have been inserted. The cause of immersion should be stated, when known, as in Nos. 27, 28, and 29. In No. 43, was recorded.

- (23) A boy 13, son of a hook-and-eye-maker. "Accidentally drowned whilst bathing at Christchurch, Surrey."
- (24) A man 19. "Accidentally drowned whilst bathing in the Surrey Canal."
- (25)\* A boy 11. "Accidentally drowned."
- (26)\* A man 33. "Found drowned, without marks of violence."
- (27)\* A man 37, seaman. "Drowned by the upsetting of a boat, from the swell of a steam-vessel."
- (28)\* A man 28, seaman. "Drowned by the upsetting of a boat, from the swell of a steam-vessel."
- (29)\* A man 20, seaman. "Drowned by the upsetting of a boat, from the swell of a steam-vessel."
- (30) A man 19. "Accidentally drowned in the high seas."
- (31) A man about 28. "Accidentally drowned in the River Thames."
- (32) A man 17. "Accidentally drowned in the River Thames."
- (33) A man 20. "Accidentally drowned in the River Thames."
- (34)\* A man 29. "Accidentally drowned."
- (35)\* A woman 30. "Drowned herself in a state of temporary insanity."
- (36) A woman about 30. "Found dead in the Surrey Canal—no proof by what means she came into the water."
- (37)\* A woman 39. "Drowned, by what means no evidence."
- (38)\* A woman about 26. "Supposed from drowning."

### HANGING:—

- (39) A man about 67, lodging-house-keeper. "Hanging himself in temporary insanity."
- (40) A man 69. "Suicide by hanging, in temporary derangement."
- (41) A man 25, labourer. "Hanged himself in a temporary state of insanity."
- (42) A woman 29. "Suicide by hanging, in temporary insanity."

### BURNS and SCALDS:—

- (43)\* A woman about 65. "Injuries from being accidentally burnt."
- (44) A man 21. "Extensive superficial burn on feet, arms, and back, caused by the falling in of the roof of a house on fire (17 days); numerous superficial ulcerations of stomach, one or two large and deep in the duodenum (*post mort.*)"
- (45) A boy under 1. "Scald of the breast and side, from his accidentally pulling down a vessel containing hot coffee—lived 8 days."
- (46)\* A girl 1. "From the effects of being accidentally scalded."

### POISON:—

- (47) A man 25, foreman to a glass warehouse. "Suicide with essential oil of almonds—not known if insane."
- (48) A woman 19, servant, spinster. "Suicide with oxalic acid."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
*During the Week ending Saturday, August 9th, 1845.*

[illegible]

The height of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's limit glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0; a cloudy sky by 10; and when partially cloudy, by estimating the number of Sunlays. † The mean direction of the wind for the week is W. S. W.

The whole sky covered with clouds. The observations are taken every half hour during the day of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at six A.M., and therefore exhibit the highest and lowest readings respectively have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The former of these thermometers is at present away for rectification.

Whewell's aneroid from the indications of which the estimation of horizontal movement is made<sup>a</sup> is read at 10h. 4 m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroid is read.

The magnetic compass is compared by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence the 16th of June.

<sup>a</sup> In reading the 10th column it will be borne in mind that + is read "never," and - is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer suspended from the side of the Dreadnought Hospital Wall, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.—No. 33.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 16th August.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,950; and in June 1841, 1,915,104.

2.—Under *small-pox* is included, “varicella (4 days)—marasmus since birth,” a male aged 5 months. Under *atrophy*, “atrophy for want of the breast,” a male 10 months; “atrophy without breastmilk from birth—premature (7 months),” a female 3 weeks; “atrophy from want of breastmilk,” a female 4 weeks; and “natural—a seven months’ child, drynursed,” a male 3 weeks. Under *disease of the heart*, “diseased heart and albuminuria, terminating suddenly in apoplexy,” a male 56 years. Under *worms*, “infantile fever,” a female under 1 year. Under *stricture of the intestinal canal*, &c., “stricture of the œsophagus,” a male 70 years. Under *hematemesis*, “black vomit,” a female 33 years. Under *disease of the liver*, “gallstones,” a female 68 years. Under *stricture of the urethra*, “abscess in the perineum, and stricture,” a male 36 years. Under *disease of the kidneys*, “granular degeneration of the kidneys—Bright’s disease,” a male 44 years; “albuminuria (4 months),” a male 39 years; and “granular disease of the kidneys,” a female 24 years. And under *ulcer*, “diarrhœa and ulcer on the chest caused by a blister,” a male 11 months. A woman died at the advanced age of 92 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A boy 4. “Accidental from becoming entangled in the wheel of a hackney cabriolet drawn by one horse, when riding on the back spring.”
- (2) A girl 12, daughter of a weaver. “Chest crushed by the wheel of a van accidentally.”
- (3) A man 50, waggoner. “Injuries to the lower extremities by the wheel of a waggon going over him accidentally.”
- (4) A man 20, labourer. “Peritonitis from rupture of the spleen, being accidentally run over by a cart wheel.”
- (5) A man 58, labourer. “Ossification of the arteries accelerated by a fracture of the thigh from the wheels of a waggon.”
- (6) A boy 14, son of a butcher. “Rupture of the liver &c. caused by an accidental injury in falling from a cart.”
- (7)\* A man 48. “Crushing and fracture of the left knee and leg, caused by the collision of two railway trains.”
- (8)\* A man 32, labourer. “Injury to the leg by the fall of a piece of iron.”
- (9) A man 33, musician. “Manslaughter against Joseph Harvey, causing the rupture of a blood-vessel of the lungs by striking and throwing him to the ground.”
- (10) A woman 32, wife of a labourer. “Fracture of the spine caused by an accidental fall into an area, while in a state of intoxication.”
- (11) A man 81, pauper. “Suicide by throwing himself from a certain flight of stairs, producing contusions of the head and fracture of the left leg, being at the time of unsound mind.”
- (12) A girl 1. “Hydrocephalus following injury of the head from a fall, 16th day.”

### DROWNING:—

- (13) A boy 2, son of a master mariner. “Drowned in the River Thames, by accidentally falling out of the brig ‘Hudgill’ of Newcastle.”
- (14) A boy about 10, son of the captain of the brig “Eleonora” of Memel. “Drowned in the Commercial Docks—no proof by what means—no marks of violence.”
- (15)\* A man 10. “Accidentally drowned.”
- (16) A boy newly born. “Unknown—found in the Regent’s Canal.”

### HANGING:—

- (17) A man 57, painter and glazier. “Hanged himself—state of mind unknown.”
- (18) A man about 69, keeper of a coal-shed. “Hanged himself in a state of mind unknown—had been a drunkard.”

### BURNS and SCALDS:—

- (19)\* A man 33, labourer. “Accidentally burnt.”
- (20) A boy 4, son of a gas-fitter. “Scalded by a kettle of heated water accidentally falling on his person.”

### POISON:—

- (21) A man 33. “Poisoned himself in a temporary state of insanity caused by excessive drinking.”
- (22) A woman 26, servant of all work. “From the effects of taking some poison, in a state of temporary insanity.” *Post mort.* The poison was arsenic, and she admitted to the person who sold it to her, that she had taken the whole of it.

### NEGLECT:—

- (23)\* A boy under 1. “Manslaughter by Ann Smith, the mother—wilful neglect.”

\* In No. 7 the name of the railway on which the collision occurred should have been stated. In No. 8, the description of workshop, yard, or other place, should have been returned. Nos. 15 and 19 are obviously defective—the name of the river or other water in the former, and the circumstances of the accident in both, being omitted. In No. 23, was death caused by privation, external injury, or by what particular means?

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
*During the Week ending Saturday, August 16th, 1845.*

[illegible]

The height of the eastern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by  $\frac{1}{4}$ , a cloudy sky by  $\frac{1}{2}$ , and when partially cloudy, by estimating the number of tenths of the whole sky covered by clouds. The observations are taken every two hours, day and night, and the exceptions of Sunlays, fully exposed to the sky, are taken every day. The one placed in the full rays of the sun, and the one so placed on grass have occurred in the previous 24 hours. There are, however, no observations which exhibit the highest and lowest readings that have occurred in the previous 24 hours. These are, however, not the only ones which precedes that on which the thermometers are read. The former of these thermometers is at present at the Observatory, and the latter is at Greenwich. Whewell's anemometer (from the indications of which the estimate of horizontal movement is made) is read at 11h. 45 m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 22 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

- In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.
- The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.—No. 34.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 23rd August.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—Under small pox is included “chicken-pox—dentition—convulsions,” a male aged 6 months. Under atrophy, “want of breastmilk from birth,” a female 8 months; and “premature birth, and inability to take food,” a female 1 month. Under malformation, “imperforate anus,” a male 5 days. Under hydrocephalus, “chronic hydrocephalus, with spina bifida,” a female 5 months. Under ulceration of the intestines, “ulceration of the intestines—granular kidneys,” a female 33 years. Under disease of the kidneys, “anasarca—mottling and degeneration of the kidneys (post mort.),” a male 24 years. And under disease of the skin, “pemphigus,” a female 20 years. Two women died severally at the age of 90 years, and a third at the age of 94 years.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 66, bricklayer. “Accidental from fractured thigh and ribs, caused by a fall from a scaffold at the Stepney Union.”
- (2) A man 42, labourer. “Accidental by a fall from a mast-head in London Docks.”
- (3) A woman 45. “Apoplexy from having fallen down stairs, being left in a state of extreme intoxication.”
- (4) A man 70. “Killed by a carriage passing over him.”
- (5) A boy 2. “Bodily injuries received from the rear wheel of a certain cart passing over his body and head accidentally.”
- (6) A boy 1, son of a currier. “Accidental from a ruptured pelvis, caused by the wheel of a cart crushing it at St. Anne's Place, Mile End.”
- (7) A man 40, labourer. “Accidental by fractured ribs and spine, and a mortal shock from a horse and dray, and the wheel thereof passing over his body.”
- (8) A woman 85, widow. “Accidentally run over by a cart in Prescott-street, causing a fractured thigh.”
- (9) A man 45, labourer. “Accidental by a crane causing a blow in his face, and fracture of his skull, at the London Docks.”
- (10)\* A man 36, painter. “Accidentally killed by the fall of an iron girder.”

- (11) A man 40. “Found dead under one of the arches in Essex Street, lately made for forming the intended new street, with a mark of violence on his head from a blow or fall sufficient to cause death; but how caused no evidence appeared.”
- (12)\* A boy 13. “Fracture of outer table of skull—effusion in the cavity of the chest (15 days' duration).”
- (13)\* A woman 86. “Fracture of neck of thighbone within the capsule, and sloughing of the foot (post mort.)”
- (14) A man 28, waiter. “Death from a blow on the right side of the head, causing a mortal extravasation of blood on the brain—cause unknown.”

### SUFFOCATION:—

- (15) A woman 74. “Accidentally suffocated by a piece of bread whilst eating.”

### SCALDS:—

- (16) A boy 1. “Accidentally scalded by falling into a pan of water.”
- (17) A boy 1. “Scalded by tea accidentally falling on his chest (5 days).”

### MEANS NOT STATED:—

- (18)\* A man 69. “Committed suicide.”

\* In No. 10 should have been recorded the description of workshop or other place in which the accident occurred. In Nos. 12 and 13 the cause and other circumstances of the injuries are improperly omitted. In the case of suicide (No. 18), the means of destruction which had apparently been employed, and the state of mind in which the act was committed, should obviously have formed a part of the return.

The height of the cistern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 1, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the sky, are taken every morning at 10h. A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The former of these thermometers is at present away for rectification. Whewell's anemometer from the indications of which the estimation of horizontal movement is made<sup>a</sup> is read at 10h. A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 51.9; and the mean reading at 7h. 30m. p.m. was 57.8; the mean readings at the Royal Observatory for the same times were 51.6, and 56.1 respectively.

† The MEAN direction of the wind for the week is S.S.W.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, 30th August.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under small-pox is included, “necrosis of the left superior and inferior maxillary bone, following small-pox natural (1 month),” a female 3 years. Under diarrhoea, “diarrhoea (5 weeks), apthæ (15 days), atrophy for want of breastmilk,” a male 3 months; and “diarrhoea (3 weeks) brought up by hand,” a female 9 months. Under purpura, “purpura hæmorrhagica—epistaxis (12 hours),” a male 9 years. Under atrophy, “atrophy without breast milk from birth,” a male 10 days. Under convulsions, “eclampsia,” a female 31 hours. Under laryngitis, “stridulous laryngeal suffocation—irritative fever—after blistering the sore sloughed,” a female under 1 year. Under disease of the lungs, “disease of the lungs—hydrocele,” a male 68 years. Under disease of the heart, “angina pectoris (40 hours)” a female 26 years; and “organic disease of the heart—angina pectoris,” a male 70 years. Under worms, “infantile remittent fever,” a male 2 years; and “infantile fever,” a male 7 years. Under ulceration of the intestines, “diarrhoea—ulceration of Peyer’s glands (17 days),” a male 1 year. Under disease of the digestive organs, “typhoid—loss of tone in the intestinal canal produced by bad living—improper diet—during the last ten months, perhaps longer,” a female 50 years. And under disease of the skin, “invervete psoriasis (3 months), erysipelas (1 week), gangrene (2 days),” a female 80 years; and “bronchitis, whooping cough—herpes zoster—erysipelas,” a male 2 years. Two men died at the respective ages of 95 and 96 years; and two women at 90 and 91 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man about 37, labourer. “Accidental by a fall from a hay-rick—fracture of the spinal column (*post mort.*).”
- (2) A man 68, labourer. “Accidental by falling from a hayrick—compound fracture of the left leg.”
- (3) A man about 67, out-pensioner of Chelsea Hospital. “Accidental from a fall down stairs when in a state of intoxication—compound fracture of the right leg, followed by abscesses in the lungs (*post mort.*).”
- (4) A man 19, pot-boy. “Accidental by a fall from a scaffold—lacerated wound of the scalp, producing inflammation of the brain (*post mort.*).”
- (5) A man 32, plasterer. “Accidental by falling from an unfinished balcony—fractured rib and rupture of the spleen (*post mort.*).”
- (6) A man 35, labourer. “Accidental by falling from a ladder when picking cherries—fracture of the 11th dorsal vertebra (*post mort.*).”
- (7) A man 34. “Rupture of an abscess in the head, occasioned by a fall while fighting.”
- (8) A boy 2. “Fracture of the head by an accidental fall from a window.”
- (9) A man 46. “Fracture of the breast and ribs by an accidental fall from a scaffold.”
- (10) A man 68, bricklayer. “Effects of a fractured thigh by a fall from a scaffold.”
- (11)\* A man 46, coppersmith. “Fracture of his skull from being pushed down.”
- (12) A man 35, linkman. “Accidental from a rupture of the bladder and rectum by the breaking down of a chair, a bar of which was forced into the fundament (*post mort.*).”
- (13) A man 24, tin-plate-worker. “Manslaughter against Owen Buckley—death by fighting.”
- (14) A man about 28, bricklayer’s labourer. “Accidental by a chisel falling from a height of 60 feet on to the back part of the head, fracturing the skull and lacerating the brain (*post mort.*).”
- (15) A boy 14, son of a livery stable keeper. “Accidental by being thrown from a horse—fractured skull and rupture of the brain (*post mort.*).”
- (16) A man 35, coachman. “Accidental by being thrown from a horse—rupture of the aorta (*post mort.*).”
- (17) A boy 8, son of a tailor. “Accidental by a gig drawn by one horse—fractured skull and laceration of the brain (*post mort.*).”
- (18) A man 36, porter. “Injury of his head from being thrown out of a cart which he was driving near the Bank of England on the day previous.”

- (19) A man 72, carman. “Accidentally run over by a waggon-wheel in the Commercial Road, causing a mortification of his leg.”
- (20) A girl 4, daughter of a labourer. “Fracture of the skull from being struck by the wheel of a cart, in the shafts of which there was a runaway horse.”
- (21)\* A man 43, smith and engineer. “Fracture of his left leg, accidentally caused by a railroad carriage.”
- (22)\* A woman 82. “Decay of nature, and fracture of the neck of thigh-bone—ill about 9 weeks.”

### DROWNING:—

- (23)\* A boy 13, son of a fisherman. “Drowning on the 27th August, by accidentally falling out of a boat while at work.”
- (24) A boy 15, son of a pianoforte-maker. “Accidentally drowned by falling from a steam-boat in the River Thames.”
- (25)\* A man 27. “Found drowned, without marks of violence.”
- (26)\* A man 21. “Accidentally drowned—a deodand of £5 on the owner of the boat from which he fell.”
- (27)\* A man 41, engineer and plumber. “Accidentally drowned by falling out of a boat.”
- (28) A boy newly-born, unknown. “Found dead in the River Thames, off Belvidere Road—no proof whether born alive.”

### SUFFOCATION:—

- (29) A boy 11 months, son of a joint-finisher. “Accidentally hung and suffocated by his head falling between the seat and back-rail of a chair.”
- (30) A girl 1, daughter of a porter. “Accidentally suffocated in bed by pressure against the bed-clothes.”

### BURNS and SCALDS:—

- (31) A woman 23, wife of a tailor. “Accidentally burnt by her clothes taking fire.”
- (32) A woman 61, widow. “Accidentally burnt by her clothes taking fire (*post mort.*).”
- (33) A girl 1, daughter of a labourer. “Accidentally burnt by her clothes taking fire.”
- (34) A man 45, fireman in a steam-boat. “Accidentally scalded by an explosion of steam.”
- (35) A boy 1, son of a labourer. “Accidental from scalds on his back and loins by falling into a pan of boiling water in Luke-street, Stepney.”
- (36) A boy 1, son of a compositor. “Scalds received by pulling a quantity of hot water on his person accidentally.”

\* The Return (No. 11) states the means, but omits the cause and place of the injury. Was the person pushed down by a carriage, or in wrestling, or in what other way? On the street, or in what other place? No. 21 is defective: it should have contained the name of the railway. In No. 22, how and where was the fracture caused? In Nos. 23, 25, 26, and 27 (cases of drowning) is improperly omitted the name of the river or other water. Were the boats, to which Nos. 26 and 27 have reference, steam-boats, or what other description of boat?

*During the Week ending Saturday, August 30th, 1845.*

The height of the eastern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy, by estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 6h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made<sup>1</sup>) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 10th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts above-mentioned, which include the City of London *within* and *without* the Walls, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—Under *thrush* is included “aphthæ (1 month), from having lost the breast when 10 days old; diarrhœa (2 to 3 weeks),” a female aged 6 weeks. Under *diarrhœa*, “atrophia ablactatorum (5 weeks), diarrhœa (1 month),” a male 11 months. Under *cholera*, “cholera Asiatic (36 hours),” a male 53 years. Under *hæmorrhage*, “epistaxis (3 days),” a male 4 years. Under *atrophy*, “atrophy, debility from want of breastmilk (2 months),” a male 4 months; also 2 males aged respectively 8 weeks and 5 months, and a female aged 3 weeks, who died from want of breastmilk. Under *cephalitis*, “otitis (7 weeks), cephalitis (3 days),” a male 35 years. Under *tabes mesenterica*, “mesenteric disease (8 weeks), atrophy (4 weeks), deprivation of the breast,” a male 3 months. Under *worms*, “infantile remittent fever—diarrhœa (3 weeks),” a male 5 months. Under *ulceration of the stomach*, “ulceration of the pharynx (6 months),” a female 48 years. Under *disease of the liver*, “cirrhosis (3 years),” *post mort.*, a male 53 years. And under *disease of the kidneys*, “albuminous disease of the kidneys,” a male 37 years; “granular disease of the kidneys,” a female 19 years; “ulceration of the kidneys (2 years),” a female 44 years; and “albuminuria (duration uncertain), pericarditis (duration uncertain), pneumonia (7 days),” *no post mort.* examination permitted, a female 34 years. Two women died at the respective ages of 90 and 93 years.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 38, pipemaker. “Dislocation of the 5th cervical vertebra pressing on the chord, caused by an accidental fall down a flight of stairs.”
- (2) A boy 1. “Hooping cough, and inflammation of the brain caused by accidentally falling out of bed.”
- (3) A woman about 70. “Accidental by being run over by a carriage and one horse.”
- (4) A boy 13, son of a waiter. “Accidental from being forced by the running out of a rope against the timber-head of the Moonlight steam-boat, when on board off Hungerford pier, the boat having been set in motion when attached to another steam-boat. Left foot severed, and right thigh fractured. Lived 3 days.” (*post mort.*)

### WOUNDS:—

- (5) A man 36, dealer in turf. “Hæmorrhage (20 minutes), rupture of the brachial artery, and diffuse cellular inflammation of right arm and hand, arising from a slight cut in the thumb whilst cutting bread and cheese, 3 weeks ago.”
- (6) A man about 40. “Suicide by cutting his throat—state of mind unknown.”

### DROWNING:—

- (7) A man 82, retired butler. “Suicide by drowning in a tank of water, while of unsound mind.”
- (8) A man 40, ship-carpenter. “Accidentally drowned by falling into a Dock at Messrs. Green’s Yard, Blackwall.”
- (9) A girl 3. “Accidentally drowned in the Grand Surrey Canal.”
- (10)\* A male, age unknown. “Found dead in the Regent’s Canal.”

### HANGING:—

- (11) A man 66. “Hanged himself in a temporary state of derangement of mind.”
- (12) A man 23, editor of a newspaper. “Suicide by hanging, being insane.”

### POISON:—

- (13) A boy 5 weeks, son of a labourer. “Poisoning by an overdose of decoction of poppy-head, given by the mother to allay restlessness—death in 6 hours.”

\* No. 10. It should have been stated in this entry, whether it was the body of a child or adult.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
*During the Week ending Saturday, September 6th, 1845.*

1846	Phase of the Moon	Readings of Thermometers										Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years			WIND				Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock in the next morning	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS

Tu. 2	In Equator	30.059	62.4	49.2	56.3	52.0	88.0	38.8	60.2	60.2	4.3	6.7	2.1	— 2.4	0	0	0	0	0	85	7.9	0.00					Overcast till 11 p.m., and from that time to 3 p.m. the sky was nearly cloudless, and after 3 p.m. the sky was overcast till midnight.	
W. 3		30.077	59.8	50.8	54.7	49.8	79.5	31.8	60.0	59.8	4.9	7.2	0.8	— 4.3	0	0	0	0	0	60	10.0	0.00					With the exception of a portion of time between 6h. a.m. and 8h. a.m., the sky was overcast all day.	
Th 4		30.079	59.0	43.4	52.4	47.5	75.5	33.6	59.2	59.0	4.9	10.1	0.7	— 7.8	0	0	0	0	0	90	8.1	0.00					The day was overcast throughout.	
F. 5		30.018	60.0	46.2	53.1	46.8	81.0	47.6	58.5	58.5	6.3	11.0	1.9	— 6.2	0	0	0	0	0	110	9.7	0.06					At first a thin cirro-stratus, then faint gleams of sunshine, and afterwards light clouds.	
Sa. 6		30.038	61.0	46.9	53.8	48.2	89.4	29.4	58.8	58.2	5.6	12.6	0.4	— 5.2	0	0	0	0	0	110	3.9	0.00					At 5h. a.m.; from that time till 7h. a.m. the sky was one-half covered with cloud, and from the latter time to 9h. p.m. the sky was generally overcast; it was cloudless at 10h., and overcast again before midnight.	

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of clouds in the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays.

The height of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed in a fully exposed but shaded position, are taken every morning at 50 minutes past 4, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. 4 m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the observations are made.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the

ANNUAL SERIES.  
VI.

1845.—No. 37.

# NOTES.

1.—Under *diarrhœa* is included "diarrhœa (9 days), meningitis and convulsions (5 days), loss of milk from mother's illness," a female aged 4 months. Under *atrophy*, "atrophy, want of breastmilk from birth," a male 7 months, and a female 1 month; and "debility, without breastmilk," a female 3 weeks. Under *malformation*, "cyanosis," a male 3 days. Under *convulsions*, "convulsions from dry nursing," a female 7 weeks; "cynanche parotidæa (6 days), convulsions (2 days)," a male 1 year; and "eclampsia," a male 3 days. Under *disease of the heart*, "angina pectoris (4 years)," a male 75 years. Under *tabes mesenterica*, "tabes mesenterica (4 months), brought up by hand," a female 1 month. Under *worms*, "infantile remittent fever," a male 1 year; and "infantile fever, diarrhœa (1 weeks)," a female 1 year. Under *disease of the stomach*, "indigestion, atrophy," a male 3 months. Under *disease of the liver*, "cirrhosis, ascites (post mort.)," a female 43 years; and "enlarged liver, granulated—jaundice (26 days), an ovarian cyst on each side," post mort., a female 53 years. Under *disease of the kidneys*, "albuminuria," a female 36 years. And under *disease of the joints, bones, &c.*, "caries of occipital bone—paralysis (16 months)," a male 37 years. Two women died respectively at the advanced ages of 90 and 93 years.

2.—The following are the cases of death by violence which appear in the present table:—

- FRACTURES and CONTUSIONS:—

(1) A boy 7, son of a shoemaker. "Fracture of his skull, laceration and inflammation of the brain, by an iron pot falling on him in White Hart Court, Long Lane, Smithfield, which had been accidentally pushed off the top of a chimney whilst being swept with a machine. Lived 14 days." post mort.

(2) A woman 63. "Injury to the spine—effect of a fall down stairs."

(3)\* A girl 7. "Concussion of the brain from a fall (13 days), thrush (3 days)."

(4) A boy 1. "Crushing of the head by a cart-wheel on the high road, the driver not being in his right place, and not seeing the child—instant death."

(5) A boy 8, son of a glass-stopperer. "Concussion of the spinal column from the blow of a chain on the loins, the chain crossing between the shafts of a van. He was playing between the shafts, which suddenly fell from being jarred by a passing cart." post mort.

(6) A man 43, carver and gilder. "Accidental fracture of his ribs by a pony running against him."

(7) A girl 1. "Crushing of the body by a cart-wheel—accidentally knocked down by the wheel while at play in the Holloway-road—lived 5 hours."

(8) A girl 4, daughter of a baker. "Accidentally run over by a cart."

(9) A man 27. "Accidental death, accelerated by over-exertion, and a blow, the cause unknown."

WOUNDS:—

(10) A girl newly-born. "Not known whether born alive—found with the head cut off—had apparently been in the soil 3 weeks—much decomposed. Probably born without medical aid."

DROWNING:—

(11)\* A boy 12, son of a carman. "Accidentally drowned by falling from a barge."

(12)\* A man 23, seaman. "Accidentally drowned by falling from the bowsprit of a vessel."

(13)\* A boy 14, son of a hop-porter. "Accidentally drowned while getting into a boat from a ship."
- (14)\* A boy 9, son of a warehouseman. "Accidentally drowned by a fall from floating timber."

(15)\* A man 17, son of a fellmonger. "Drowned by falling out of a boat while pushing it off from a barge—under water 10 days."

(16)\* A boy 11. "Accidentally drowned whilst bathing, by getting out of his depth—could not swim."

(17) A girl 1. "Accidentally drowned in a tub of water by falling therein."

(18) A man 19, labourer. "Found dead without marks of violence in the Regent's Canal, Haggerstone, apparently drowned."

(19)\* A boy 10, son of a brewer's servant. "Found drowned."

(20)\* A boy supposed 14, unknown. "Found drowned."

(21) A boy 14, son of an excise officer. "Found drowned in the River Thames."

HANGING and SUFFOCATION:—

(22) A man 37, porter. "Hanged himself in a temporary state of insanity."

(23) A boy 9. "Suffocation by being accidentally suspended by the neck to a bed-post by a scarf whilst at play—suspended about 15 minutes."

(24)\* A girl 6 months. "Accidentally suffocated."

BURNS and SCALDS:—

(25) A girl 1. "Accidentally burnt by a poker falling from a fire."

(26) A boy 8, son of an iron-founder. "Accidentally burnt by his clothes taking fire."

(27) A girl 11, daughter of a dyer. "Accidentally burnt by her clothes taking fire."

(28) A girl 1, daughter of a porter. "Accidentally scalded by upsetting a pan of hot water."

POISON and OTHER SUBSTANCES:—

(29) A man 43. "Suicide with arsenic taken while insane—an habitual drunkard."

(30) A man 19, clerk to a wholesale druggist. "Suicide with the essential oil of bitter almonds, half an ounce—death in six minutes—post mort.; state of mind unknown to the jury."

(31) A man 17, sea-apprentice. "Overdraught of brandy taken voluntarily, and not with the intent of destroying life."

\* No. 3 is a defective return: the circumstances of the accident are not described. In cases of drowning, the name of the river, canal, or other water, should occupy a place in the return. No. 24 is obviously imperfect—By what means was suffocation caused?

## NOTES.

1.—Under *ague* is included "intermittent fever (22 days)—abscess in the internal ear, extending into the throat—caries of the mastoid temporal bone (6 months)," a male aged 7 years. Under *dropsy*, "rachitis—anasarca," a female 3 years. Under *cancer*, "melanosis (duration unknown), mania (4 months), vomiting (6 days)," a male 15 years. Under *atrophy*, "marasmus, debility from want of breastmilk," a male 4 months; and "defective nourishment—inanition," a male 9 weeks. Under *malformation*, "spina bifida," a male 10 weeks; "spina bifida, with convulsions from its birth," a female 5 weeks; "defective palate, exhaustion," a male 10 weeks; and "defective nutrition, in consequence of deficiency in the bones of the palate," a female 11 days. Under *cephalitis*, "myelitis (18 months)," a male 4 years. Under *disease of the brain, nerves, &c.*, two cases of "neuralgia," females, aged respectively 31 and 63 years. Under *phthisis*, "neuralgia—phthisis," a male 28 years; laryngeal phthisis (2 years)," a male 54 years; and "phthisis—caries of cervical vertebrae," a female 5 years. Under *disease of the liver*, "hydatids in the liver (10 years)," a female 43 years; and "cirrhosis—anasarca (2 days)," a female 33 years. Under *disease of the uterus*, "hydatid placenta—internal bleeding (2 months)," a female 47 years. Under *disease of the joints, bones, &c.*, "caries of the spine—abscess and dropsy (6 weeks)," a male 12 years. Under *disease of the skin*, "pompbolyx (6 days), emaciation (8 months)," a female 9 months. And under *privation*, "want, neglect of herself, and filthy habits," a female 61 years. One man died at the age of 93 years, and five women at the respective ages of 90, 93, 94, 95, and 98 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A woman 43, charwoman. "Injuries of the spine by a fall over a bridge in the Regent's Park, on to a towing path—lived 3 hours—not known how she happened to fall."
- (2) A woman 60. "Accidental by a fall down stairs."
- (3) A woman 41, wife of a carpenter. "Rupture of the small intestines by a fall from Blackfriars' Bridge, from which she threw herself, being of unsound mind at the time."
- (4) A woman 63. "Accidental death from a fractured vertebra of the neck, by an accidental fall down stairs."
- (5) A man 43, linen merchant and manufacturer. "Tetanus following a compound comminuted fracture of the right leg, occasioned by being thrown off an omnibus in the Strand, from the breaking of a linch-pin—lived 27 days."
- (6) A man 35, porter to an hotel-keeper. "Injuries of the head by a fall out of a cart, from being over-balanced by a child in his arms—death in ten minutes."
- (7) A man 42. "Erysipelas of the arm (6 days), fractured 11 weeks since by falling from a cab."
- (8) A boy 1, son of a confectioner. "Fractured skull, by being knocked down and run over by a prison van, drawn by two horses (2 hours)."
- (9) A man 23, labourer. "Injury of some contents of the abdomen by a blow from the handle of a barrow, by the wheel accidentally coming off."
- (10) A boy 5, son of a cabinet-maker. "Compression of the brain, caused by an accidental blow on the head with a mallet, 12 months since."

### WOUNDS:—

- (11)\* A man 25. "Manslaughter against Michel Carrol. Death from a wound on the head, and effusion on the brain."

### DROWNING:—

- (12) A man 55, coach-trimmer. "Suicide by drowning—state of mind not known."
- (13) A man about 24, canal-boatman. "Drowned, whether accidentally or not unknown."

- (14)\* A woman 20. "Found dead—apparently drowned, with marks."

- (15) A girl, new-born. "Found dead in the water of the New Cut of the River Lea."

- (16) A boy new-born (unknown). "Found dead in the River Thames—how death was caused unknown."

### HANGING and SUFFOCATION:—

- (17) A woman 19, servant. "Hanged herself, but in what state of mind unknown."
- (18) A man 36. "Hanged himself in a temporary state of derangement of mind."
- (19) A man 78, ivory-turner. "Hanged himself, being at the time of unsound mind."
- (20) A man 34, shoemaker. "Hanged himself in a temporary state of insanity."
- (21) A woman 64. "Suicide by hanging—had erysipelas of the legs 6 weeks ago, which healed—head became affected—verdict, insane."
- (22) A girl 2. "Suffocation by falling into the soil of a privy accidentally."

### BURNS and SCALDS:—

- (23) A man 21. "Accidentally burnt while working a fire-engine, by the flames of ignited turpentine issuing from a building on fire—died instantly." (In a yard belonging to Sir Charles Price and Co., Blackfriars.)
- (24) A woman 67. "Accidentally burnt in her own house, her clothes taking fire."
- (25) A woman about 70, staymaker. "Burns on her head, chest, and arm, by her clothes taking fire, when lighting a fire." (post mort.)
- (26) A man 60, scum-boiler. "Scalded by falling into his boiler 10 weeks since—died from exhaustion."

### POISON:—

- (27) A boy 11 months, son of a labourer. "Overdose of syrup of poppies given by the mother by mistake, as a remedy for restlessness."

\* In No. 11 the instrument by which the wound was inflicted should have been recorded. In No. 14 should have been stated the name of the river, canal, or other water, in which the person was found.

General Register Office, Tuesday, September 23rd, 1845.

The height of the eastern of the barometer is considered to be 130 feet above the mean level of the sea. The readings of the  
barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is  
estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of  
tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays.  
The readings of the two self-registering thermometers, the one placed in the shade of the sun, and the other placed on grass  
fully exposed to the sky, are taken every morning at 8h. a.m., and therefore exhibit the highest and lowest readings respectively that  
have occurred in the previous 24 hours. They are, however, placed their opposite to the civil day which precedes that on which the  
thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the  
result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read,  
at his residence in the neighbourhood of Greenwich Park.

\* In reading the 10th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.  
The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side  
of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.—No. 39.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE

NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, September 27th.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under *small pox* is included one case of "swine pox," a female aged 2 years Under *diarrhoea*, "improper and insufficient nourishment while at nurse—emaciation (5 months)—diarrhoea (2 weeks)," a male 8 weeks; and "diarrhoea from weaning (2 months)," a female 9 months. Under *erysipelas*, "inflammation of the arm after vaccination (3 weeks)," a male 4 months. Under *atrophy*, "exhaustion from weaning," a female 6 months; and "debility from want of breastmilk," a female 6 weeks. Under *malformation*, "spina bifida—operation (6 days)," a female 3 months. Under *phthisis*, "consumption (1 year), pneumothorax (7 hours)," a male 43 years. Under *disease of the heart*, "angina pectoris (2 years)," a male 63 years, and "angina pectoris," a male 37 years. Under *disease of the kidneys*, "granular disease of the kidneys (2 years), disease of the mitral valve of heart (1 year), dropsy (1 year)," a male 53 years; and "albuminuria (1 month)," a male 38 years. And under *causes not specified*, "exhaustion—came home from a tavern at midnight, July 16th; vomited frequently that night, continued unwell, seen by a surgeon on the 18th, then comatose—treated for disease of the head—sensitivity never restored—died at 4 p.m. on the 19th—not one morbid appearance of any kind found in the body, every portion of it having been examined—extremely healthy," a female 16 years (Coroner's verdict). In the present table are enumerated a man who died at the age of 90 years; and four women who died, two at 90 years, one at 91, and one at 94 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES AND CONTUSIONS:—

- (1) A man about 60, plasterer. "Injury of the head by a fall from a builder's scaffold—a ledger (part of the scaffolding) giving way by his falling against it."
- (2) A man 45, surgeon and apothecary. "Shock sustained by the system from a fall down stairs (28 days)."
- (3) A man 57, gentleman, formerly a lieutenant in the army. "Accidental death by a fall down stairs, and broken back."
- (4) A man 59, porter to a wholesale grocer. "Compression of the brain by an accidental fall into a cellar—lived about 4 hours."
- (5) A man 52, journeyman worker in emery. "Inflammation of the pleura and left lung by a fracture of the rib from an accidental fall against the edge of a table in a public-house, *post mort.*—lived 3 weeks."
- (6) A man 35, engine-turner on the Croydon, Brighton, and Dover Railway. "Laceration and effusion of blood on the brain by an accidental fall from a wall at the railway station at London Bridge," *post mort.*
- (7) A boy 3. "Fractured ribs, having been accidentally run over by a van and two horses, the property of Joseph Baxendale, on which the jury imposed a dead-end of £5."
- (8) A man 49, horse-keeper. "Thrown from and run over by a cart at Circus-street, Greenwich, from the horse running away—rupture of the bladder—lived 4 days."
- (9) A man 38, carman. "Delirium tremens, brought on by an injury to his leg, from a timber carriage."
- (10) A man 59, ship-breaker. "Injuries caused by a piece of timber falling on him."
- (11) A man 33, carrier. "Erysipelas—fracture of his left thigh by a cask of beer falling on him."
- (12) A man 26, groom and gardener. "Rupture of his intestines by a cask of beer accidentally falling against him."
- (13) A boy 3. "Bodily injuries by a brick wall falling on him—instant death."

### WOUNDS:—

- (14) A man 51, cabinet and gun-case maker. "Temporary insanity—shot himself in the head with a pistol—lived 3 hours."

### DROWNING:—

- (15) A boy 9. "Found dead in the Regent's Canal—apparently drowned."
- (16) A man 20. "Found dead in the Regent's Canal—drowning, but how caused unknown."

\* In Nos. 17 and 20 the name of the river, canal, or other water in which the persons were drowned should have been stated. In the case of scald (No. 35) the means by which the injury was caused should have been described in the return.

In all cases of death by violence, the number of days, hours, or minutes, which elapse between the injury and death should be stated, when the time can be ascertained.

- (17)\* A man 34. "Found dead—apparently drowned."
- (18) A boy 10, son of a silk weaver. "Drowned in the River Thames by falling from a barge accidentally."
- (19) A man 42, shoemaker. "Drowned by the upsetting of a boat on the River Thames, accidentally."
- (20)\* A woman, supposed about 23, rank or profession unknown. "Found drowned—no evidence how—no marks of violence."
- (21) A woman 36, wife of a shoemaker. "Drowned in the River Thames, by the upsetting of a sailing boat accidentally."

### HANGING AND SUFFOCATION:—

- (22) A woman about 45, wife of a blacksmith. "Hanged herself to a cupboard when in a state of temporary insanity."
- (23) A woman 45, single woman, servant. "Suicide—hanging by the neck—of unsound mind during illness which lasted a week."
- (24) A man 36, ground-digger. "Suffocation by the falling in of sand, while he was digging in the well 16 feet deep; the sides not curbed sufficiently."
- (25) A girl 2 months, daughter of a labourer. "Suffocation by the arm of the mother during sleep."
- (26) A boy 5, son of a fellowship-porter. "Asphyxia produced by a glass-beat passing into the trachea accidentally."

### BURNS AND OTHER CHEMICAL INJURIES:—

- (27) A girl 8, daughter of a carman. "Burnt by her frock taking fire from a red-hot poker, at the Grove, Southwark—lived 6 hours."
- (28) A man 74, master rocket maker.
- (29) A man 56, labourer.
- (30) A man 47, labourer.
- (31) A man 31, labourer.
- (32) A man 29, labourer.
- (33) A boy 14, son of a labourer.
- (34) A boy 12, son of a Corporal in the Royal Artillery.
- (35)\* A boy 1. "Scald on the chest—mortification (5 weeks)."

### POISON:—

- (36) A boy 2, son of a stationer. "Accidentally killed by imbibing into his stomach a quantity of paint composed of arseniate of copper."
- (37) A woman 24. "Oxalic acid taken in a state of mental derangement—1 hour."

## METEOROLOGICAL

*During the Week ending Saturday, September 27th, 1845.*

[illegible]

ANNUAL SERIES.  
VI.

1845.—No. 40.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES;

REGISTERED

*In the Week ending Saturday, October 4th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:  
HARTNELL, PRINTER, RED LION COURT.

## NOTES.

1.—Under *thrush* is included, “ inanition from want of breast-milk—thrush (3 days),” a female 9 days. Under *atrophy*, three cases of atrophy from want of breast-milk, 2 males aged respectively 7 weeks and 4 months, and a female 2 months; and “ natural disease preventing adequate nutrition,” a male 8 months. Under *malformation*, “ morbus cæruleus—non-closure of the ductus arteriosus,” a male 34 hours; “ fissure of the palate—marasmus (1 month),” a male 2 months; and “ operation for harelip—diarrhoea (3 days),” a male 10 weeks. Under *disease of the brain*, “ otorrhœa purulenta (several years), necrosis of temporal bone (3 weeks), pressure on the brain from purulent effusion within the skull (4 days),” a female 26 years. Under *laryngitis*, “ laryngismus stridulus, and convulsions (8 days),” a male 1 year. Under *quinsey*, “ diphtheritis (8 days),” a female 2 years; and “ diphtheria (12 days),” a female 2 years. Under *aneurism*, “ aneurism of left femoral artery—operation, tying external iliac—cellular inflammation of pelvis passing up behind the kidney (3 days)” *post. mort.*, a male, 29 years. Under *disease of the kidneys*, “ albuminuria—hydrothorax with general dropsy (1 month),” a male 53 years; and “ granular kidney, chronic,” a male 26 years. Under *disease of the skin*, “ dentition (14 days), pompholyx (6 days),” a female 1 year, and “ improper nourishment—*rupia* (14 days),” a male 3 months. Four women died at the advanced ages of 91, 91, 93, and 99 years.

2.—The following are the cases of death by violence which appear in the present table:—

- FRAC<sup>TURES</sup> AND CONTUSIONS:—
- A man 33, carman. “ Mortification following a fracture of the leg, caused by being knocked down and run over by a van drawn by two horses, when driving the van—lived 5 days.”
  - A man 41. “ Inflammation of the medullary membrane of the tibia, following compound comminuted fracture of the tibia and fibula, from crushing by a cart-wheel, on June 15th, at Little Stanmore—delirium tremens throughout to the death—a drunkard.”
  - A woman 89. “ Accidental by a carriage drawn by one horse.”
  - A man 52. “ Fractured ribs and wounded lung, caused by having been knocked down and trod upon by a certain horse.”
  - A boy 10, son of a print-vender. “ Accidental from having been run over by an omnibus in High Street, Whitechapel, causing a mortal contusion and fracture of ribs.”
  - A man 82, shoemaker. “ Accidentally run over by a cabriolet in Mile End Road, whereby his leg and thigh were fractured.”
  - A man 64. “ Mortification from fracturing the left leg, received by accidentally falling out of a certain chaise.”
  - A woman 73, widow. “ Accidentally run over by a van in the Cambridge Road.”
  - A man 67, labourer. “ Laceration of the brain, spleen, and left kidney, caused by being thrown off a plank when at work at a house, by the falling of lead upon the plank—lived 3 hours,” *p. m.*
  - A man 21. “ Injuries received by an accidental fall from a scaffold.”
  - A boy 4. “ Accidental by falling from a window.”
  - \* A boy 1. “ Acute hydrocephalus—death accelerated by a fall (5 days).”
  - A man 66. “ Delirium tremens, brought on by a fracture of his right leg, from an accidental fall down stairs.”
  - A man 33, labourer. “ Accidental fall from a scaffold, causing a fractured head.”
  - A man 41, omnibus-conductor. “ Delirium tremens, caused by intoxication and an accidental fall.”
  - \* A boy 6. “ Inflammation of the brain, which may have been accelerated by a fall.”
  - A boy 11. “ Accidental fall from a window, causing a blow and fracture of the skull.”
  - A girl 14. “ Injuries of the head from a fall into an area, while looking out of a window two storeys high—lived about 2 hours—no previous illness.”
  - \* A woman 80. “ Whether from effects of an accidental fall, or natural disease of brain, unknown.”
  - A woman about 68. “ Bronchitis, consequent on fracture of the femur, from a fall down stairs, July 27th.”
  - A man 50 or 51. “ Exhaustion in 13 days from a compound comminuted fracture of both bones of his left leg, caused by a fellow-workman falling upon him from a first floor (from being over-balanced), while both were handing a picture-frame from a yard into a carver’s workshop.”
- (22)\* A man 39, mast-maker. “ Accidental from an injured thumb, by being accidentally jammed, and delirium tremens supervening.”
- (23)\* A man 44. “ Fractured ribs (4 days), delirium tremens (2 days).”
- WOUNDS:—
- A man 31, cigar-maker. “ Suicide by cutting his throat with a razor, while labouring under temporary mental derangement, brought on by repeated attacks of dyspepsia.”
  - A male, age not known. “ Cutting his throat in temporary insanity.”
  - A man 32, sailor. “ Accidental by the explosion of the wadding of a cannon.”
- DROWNING:—
- A man 50, fishmonger. “ Found drowned in the River Thames.”
  - A man 53, baker. “ Found dead in the Regent’s Canal.”
  - A boy 14. “ Accidentally drowned by a fall from a quay.”
  - \* A man 23. “ Found drowned without marks of violence.”
  - \* A man 33. “ Accidental death by drowning.”
  - A boy 15, apprentice-seaman. “ Drowned by accidentally falling out of the brig “Hand of Providence,” of Newcastle, into the River Thames.”
  - \* A man about 24. “ Supposed from drowning—no marks of violence.”
  - A man 35, seaman. “ Found drowned in the River Thames, by what means no evidence—no marks of violence.”
  - A woman 63. “ Atrophy of the heart—death accelerated by an accidental fall into the River Thames,” *p. m.*
  - A woman 58, widow of a turner. “ Temporary insanity—drowned herself in a water-butt—about 15 minutes in the water—head downwards.”
  - A girl 2. “ Accidentally drowned in a fish-pond at Clapham.”
- HANGING AND SUFFOCATION:—
- A woman 68. “ Hanged herself by a rope from her bed, being at the time of unsound mind.”
  - A boy 1 month. “ Accidentally suffocated by bedclothes coming on his face.”
- SCALDS:—
- A boy 2, son of a painter. “ Accidental death by scalds from boiling water, by the fall of a saucepan, on the 31st July.”
  - A girl 2, daughter of a porter. “ Accidental scald caused by hot water having fallen on her chest out of a teacup.”
- POISON:—
- A woman 45, pastry cook. “ Temporary insanity—suicide by prussic acid (20 minutes).”
- NEGLECT:—
- A girl newly born (rank or profession of parents unknown.) “ Neglect at birth—verdict of wilful murder against some person unknown.”

\* In Nos. 12, 16, and 19, the *place* of the accident, and other known circumstances, should have been stated. In No. 22, it should have been stated whether the injury was caused by machinery, or by what other means. If by machinery, of what kind? No. 23 is obviously imperfect: how was the fracture caused? In Nos. 30, 31, and 33, the name of the river, canal, or other water, should have been mentioned in the returns.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, October 4th, 1845.

1845 Day	Phases of the Moon	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			WIND			Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock in the next morning	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS																																																																																																																																																																																																																																																																																																																								
		Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)					In the Water of the Thermometers by the self- registering Thermometer, read at 9 o'clock next morning					Highest in the sun, as shown by a self-register- ing thermometer			Lowest on the grass, as shown by a self-register- ing thermometer								Highest in the air, as shown by a self-register- ing thermometer			Lowest in the air, as shown by a self-register- ing thermometer			In the Water of the Thermometers by the self- registering Thermometer, read at 9 o'clock next morning			Difference between the Dew Point Temperature and Air Temperature			General Direction			Pressure in lbs. on the square foot			Amount of Horizontal Movement of the Air in each day

The height of the eastern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's aneroid. The aneroid of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and the number of clouds is estimated by the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whereas anemometer from the indications of which the estimation of horizontal movement is made is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher," and - is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Treadmill. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 52°·3; and the mean readings at 7h. 30m. p.m. was 59°·0; the mean readings at the Royal Observatory for the same times were 51°·0, and 54°·7, respectively.

† The mean direction of the wind for the Week is S.W.

NOTES.

1.—Under *thrush* is included, “inanition from want of breast-milk—thrush (3 days),” a female 9 days. Under *atrophy*, three cases of atrophy from want of breast-milk, 2 males aged respectively 7 weeks and 4 months, and a female 2 months; and “natural disease preventing adequate nutrition,” a male 8 months. Under *malformation*, “*morbus cœrnleus*—non-closure of the ductus arteriosus,” a male 34 hours; “fissure of the palate—*marasmus* (1 month),” a male 2 months; and “operation for harelip—*diarrhœa* (3 days),” a male 10 weeks. Under *disease of the brain*, “*otorrhœa purulenta* (several years), necrosis of temporal bone (3 weeks), pressure on the brain from purulent effusion within the skull (4 days),” a female 26 years. Under *laryngitis*, “*laryngismus stridulus*, and convulsions (8 days),” a male 1 year. Under *quinsey*, “*diphtheritis* (8 days),” a female 2 years; and “*diphtheria* (12 days),” a female 2 years. Under *aneurism*, “*aneurism of left femoral artery*—operation, tying external iliac—cellular inflammation of pelvis passing up behind the kidney (3 days)” *post. mort.*, a male, 29 years. Under *disease of the kidneys*, “*albuminuria*—*hydrothorax* with general dropsy (1 month),” a male 53 years; and “*granular kidney, chronic*,” a male 26 years. Under *disease of the skin*, “*dentition* (14 days), *pompholyx* (6 days),” a female 1 year, and “*improper nourishment*—*rupia* (14 days),” a male 3 months. Four women died at the advanced ages of 91, 91, 93, and 99 years.

2.—The following are the cases of death by violence which appear in the present table:—

- FRACTURES AND CONTUSIONS:—**

(1) A man 33, carman. “Mortification following a fracture of the leg, caused by being knocked down and run over by a van drawn by two horses, when driving the van—lived 5 days.”

(2) A man 41. “Inflammation of the medullary membrane of the tibia, following compound comminuted fracture of the tibia and fibula, from crushing by a cart-wheel, on June 15th, at Little Stanmore—delirium tremens throughout to the death—a drunkard.”

(3) A woman 89. “Accidental by a carriage drawn by one horse.”

(4) A man 52. “Fractured ribs and wounded lung, caused by having been knocked down and trod upon by a certain horse.”

(5) A boy 10, son of a print-vender. “Accidental from having been run over by an omnibus in High Street, Whitechapel, causing a mortal contusion and fracture of ribs.”

(6) A man 82, shoemaker. “Accidentally run over by a cabriolet in Mile End Road, whereby his leg and thigh were fractured.”

(7) A man 64. “Mortification from fracturing the left leg, received by accidentally falling out of a certain chaise.”

(8) A woman 73, widow. “Accidentally run over by a van in the Cambridge Road.”

(9) A man 67, labourer. “Laceration of the brain, spleen, and left kidney, caused by being thrown off a plank when at work at a house, by the falling of lead upon the plank—lived 3 hours,” *p. m.*

(10) A man 24. “Injuries received by an accidental fall from a scaffold.”

(11) A boy 4. “Accidental by falling from a window.”

(12)\* A boy 1. “Acute hydrocephalus—death accelerated by a fall (5 days).”

(13) A man 66. “Delirium tremens, brought on by a fracture of his right leg, from an accidental fall down stairs.”

(14) A man 33, labourer. “Accidental fall from a scaffold, causing a fractured head.”

(15) A man 41, omnibus-conductor. “Delirium tremens, caused by intoxication and an accidental fall.”

(16)\* A boy 6. “Inflammation of the brain, which may have been accelerated by a fall.”

(17) A boy 11. “Accidental fall from a window, causing a blow and fracture of the skull.”

(18) A girl 14. “Injuries of the head from a fall into an area, while looking out of a window two storeys high—lived about 2 hours—no previous illness.”

(19)\* A woman 80. “Whether from effects of an accidental fall, or natural disease of brain, unknown.”

(20) A woman about 68. “Bronchitis, consequent on fracture of the femur, from a fall down stairs, July 27th.”

(21) A man 50 or 51. “Exhaustion in 13 days from a compound comminuted fracture of both bones of his left leg, caused by a fellow-workman falling upon him from a first floor (from being over-balanced), while both were handling a picture-frame from a yard into a carver’s workshop.”
- (22)\* A man 39, mast-maker. “Accidental from an injured thumb, by being accidentally jammed, and delirium tremens supervening.”

(23)\* A man 41. “Fractured ribs (4 days), delirium tremens (2 days).”

**WOUNDS:—**

(24) A man 31, cigar-maker. “Suicide by cutting his throat with a razor, while labouring under temporary mental derangement, brought on by repeated attacks of dyspepsia.”

(25) A male, age not known. “Cutting his throat in temporary insanity.”

(26) A man 32, sailor. “Accidental by the explosion of the wadding of a cannon.”

**DROWNING:—**

(27) A man 50, fishmonger. “Found drowned in the River Thames.”

(28) A man 53, baker. “Found dead in the Regent’s Canal.”

(29) A boy 14. “Accidentally drowned by a fall from a quay.”

(30)\* A man 23. “Found drowned without marks of violence.”

(31)\* A man 33. “Accidental death by drowning.”

(32) A boy 15, apprentice-seaman. “Drowned by accidentally falling out of the brig “Hand of Providence,” of Newcastle, into the River Thames.”

(33)\* A man about 24. “Supposed from drowning—no marks of violence.”

(34) A man 35, seaman. “Found drowned in the River Thames, by what means no evidence—no marks of violence.”

(35) A woman 63. “Atrophy of the heart—death accelerated by an accidental fall into the River Thames,” *p. m.*

(36) A woman 58, widow of a turner. “Temporary insanity—drowned herself in a water-butt—about 15 minutes in the water—head downwards.”

(37) A girl 2. “Accidentally drowned in a fish-pond at Clapham.”

**HANGING AND SUFFOCATION:—**

(38) A woman 68. “Hanged herself by a rope from her bed, being at the time of unsound mind.”

(39) A boy 1 month. “Accidentally suffocated by bedclothes coming on his face.”

**SCALDS:—**

(40) A boy 2, son of a painter. “Accidental death by scalds from boiling water, by the fall of a saucepan, on the 31st July.”

(41) A girl 2, daughter of a porter. “Accidental scald caused by hot water having fallen on her chest out of a teacup.”

**POISON:—**

(42) A woman 45, pastry cook. “Temporary insanity—suicide by prussic acid (20 minutes).”

**NEGLECT:—**

(43) A girl newly born (rank or profession of parents unknown.) “Neglect at birth—verdict of wilful murder against some person unknown.”

\* In Nos. 12, 16, and 19, the *place* of the accident, and other known circumstances, should have been stated. In No. 22, it should have been stated whether the injury was caused by machinery, or by what other means. If by machinery, of what kind? No. 23 is obviously imperfect: how was the fracture caused? In Nos. 30, 31, and 33, the name of the river, canal, or other water, should have been mentioned in the returns.

The height of the column of the barometer is considered to be 1.39 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of this is estimated, by considering a clear sky to be represented by a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The temperature of the air is taken by the self-registering thermometer, and the temperature of the water by the self-registering thermometer, and the temperature of the soil by the self-registering thermometer. The observations are taken at Greenwich, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 11 h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 10th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

† The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Treadmill. The mean readings of a thermometer placed on the mainmast, and read each day at 6 h. 30 m. a.m., was 52.93; and the mean reading at 7 h. 30 m. p.m. was 55.90; the mean readings at the Royal Observatory for the same times were 51.90, and 54.97, respectively.

† The mean direction of the wind for the Week is S.W.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, October 11th.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—Under *thrush* is included "atrophy, want of breastmilk from birth, thrush (4 days)," a female 3 months. Under *diarrhoea*, "want of breastmilk," a male 7 days. Under *purpura*, "scurvy, pneumonia," a female 4 months. Under *atrophy*, two cases of "atrophy from want of breastmilk," a male 4 months, and a female 6 months; "inanition from improper lactation," a male 3 months; "convulsions from want of breastmilk," a male under 1 year; and "convulsions from want of suck, the mother having died (21 days)," a male 5 weeks. Under *malformation*, "spina bifida, and water on the brain from birth," *post mort.*, a male 10 months. Under *disease of the brain, nerves, &c.*, "fright caused by being thrown down by a bullock in Thames-street—lived 5 weeks," a female 1 year; "ophthalmia, great wasting of the body," a male 17 weeks; and "chronic disease of the cerebrum, refusing food for 12 months, marasmus and effusion in ventricles," *post mort.*, a male 29 years. Under *laryngitis*, "laryngismus stridulus (4 days)," a female 1 year; "consumption, granular disease of the kidneys," a male 49 years. Under *nephritis*, "chronic nephritis (6 months), albuminuria (3 months)," a male 49 years. Under *disease of the kidneys*, "granular kidneys (5 years), ascites, anasarca," a male 56 years; "albuminuria," a male 42 years; and "granular disease of the kidneys and dropsy," a female 36 years. Under *disease of the joints*, "caries of lumbar vertebrae (4 years), and psoas abscess (3 weeks)," a female 9 years. And under *disease of the skin*, "eczema (6 months), meningitis (3 days)," a male 7 months; and "debility (3 years), lepra (6 weeks)," a female 83 years. One man is registered as having died in the District of Hackney Road at the age of 100 years and 8 months.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man about 42, mason's labourer. "Concussion and divers wounds on head and body, by falling from a ladder 60 feet, when at work at a building—*instant death.*"
- (2)\* A man 63. "Subacute inflammation of the lungs, accelerated by falling accidentally on an iron railing, when intoxicated."
- (3)\* A man 48. "Fracture of the skull from an accidental fall." *post mort.*
- (4) A man (age not reported). "Fracture of the skull from falling accidentally down the hold of a ship (lived 60 hours)."
- (5)\* A girl 3. "Acute hydrocephalus (2 weeks) supposed to have been the result of a fall."
- (6) A girl 9, daughter of an appraiser. "Fracture of the skull by falling off a lead flat on to the stone-paving of a yard accidentally (3 days and 5 hours)."
- (7) A boy 5 months. "Fracture of the skull from blows wilfully inflicted, it is said, by William Still, glass-cutter, his step-father."
- (8)\* A man 36. "Injury of the finger—inflammation and abscess."
- (9)\* A man 78. "Fracture of the neck of thighbone—debility and general decay—accident on 4th August last."

### WOUNDS:—

- (10) A man 36, greengrocer. "Suicide—cut his throat with a knife—being of unsound mind."

### DROWNING:

- (11) A boy 8.
- (12) A boy 11.
- (13)\* A man about 34, unknown. "Found dead, apparently drowned."
- (14)\* A man about 25. "Supposed from drowning."
- (15) A boy apparently about 8. "Drowning" (in the River Thames).
- (16) A man 17. "Accidentally drowned in the River Thames."
- (17)\* A woman 22. "Found drowned—but how she came into the water, no evidence."

### HANGING and SUFFOCATION:—

- (18) A woman 20, straw hat and bonnet maker. "Hanged herself in a temporary state of insanity."
- (19) A woman 24. "Suicide by hanging herself with a piece of cord fastened to a pulley, being in a state of mental derangement."
- (20) A woman 24, pauper lunatic. "Accidentally choked by swallowing a piece of meat."

### SCALDS:—

- (21) A boy 1. "Scalds received by upsetting hot cocoa on his person accidentally (6 days)."
- (22)\* A man 21. "Injuries from being accidentally scalded by the explosion of a steam boiler."

\* In the *falls* (Nos. 3 and 5) *place* and any other known circumstances of the accidents should have been stated. Nos. 8 and 9 are clearly defective: it should have been shown in both cases how the injury was caused. In the cases of drowning (Nos. 13, 14, and 17), the name of the river, canal, or other water, in which the persons were found, is improperly omitted. In No. 22, did the case of explosion occur on board a steam-boat? In what kind of work was the steam machinery employed?

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

General Register Office, Tuesday, October 14th, 1845.

18

The height of the eastern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of the estimation by which the sky is to be represented by 6, a cloudy sky by 7, a clear sky by 8, and when day and night, with the exception of sundays, feasts, and holidays, the sky is covered by clouds, the number of the whole sky covered by clouds is entered under the heading "Clouds." The four placed in the full rays of the sun, and the other placed on grass fully exposed for the sky, are self registering thermometers; the one placed in the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's aneroidometer from the indications of which the estimation of horizontal movement is made, is read at 10<sup>h</sup>. A.M., and the result given is for the 24 hours preceding the civil day which precedes that on which the aneroidometer is read.

The observations furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made

\* In reading the 10th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.  
VI.

1845.—No. 42.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, October 18th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

# NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts abovementioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831 was 1,627,980; and in June 1841, 1,915,104.

2.—Under typhus is included “dothinerteria (5 weeks), albumiuria (uncertain duration), ulceration of Peyer’s glands, perforation of the ileum, peritonitis, anæmia of the kidneys, particularly the left, which was distinctly mottled,” post mort., a female aged 36 years. Under syphilis, “phagedænic ulceration of the penis,” a male 29 years. Under malformation, “imperforate anus (2 days after operation),” a male 5 days; and “cyanosis from birth—dropsy (3 weeks),” a female 4 months. Under disease of the brain, nerves, and senses, “purulent ophthalmia (7 weeks), inflammation of the bowels (24 hours), convulsions,” a male 2 months. Under quinsy, “diphtheria (21 days),” post mort., a male 7 months. Under phthisis, “anæmia, cavity in the right lung—granular disease of the kidneys,” a male 44 years. Under tabes mesenterica, “tabes mesenterica from birth, without breastmilk from birth,” 2 females, aged respectively 2 months and 5 months. Under worms, “infantile fever,” a male 4 months; and “infantile remittent fever (6 weeks), effusion into the ventricles of the brain (4 days),” a male 1 year. Under disease of the digestive organs, “inflammation of the tongue (10 days),” a female 1 year. Under disease of the kidneys, “granular kidneys (6 months), chronic bronchitis (2 months),” post mort., a male 45 years; “albuminuria (1½ year), and general dropsy,” a male 65 years; and “granular disease of the kidneys (3 years), ascites and effusion of all the serous cavities (6 months),” a female 48 years. And under disease of the joints, bones, &c., “caries of the vertebrae (4 years),” a male 10 years; and “caries (1 year),” a male 20 years.

3.—The following are the cases of death by violence which appear in the present table:—

- FRACTURES and CONTUSIONS:—

  - (1) A man 46. “Accidentally run over by his own cabriolet—fractured ribs.”
  - (2) A man 44, bricklayer’s labourer. “Injuries of the chest from a fall while at work on a ladder resting against a house.”
  - (3) A boy 1, son of a carman. “Convulsions arising from concussion of the brain by falling down stairs accidentally.”
  - (4)\* A man 73. “Fracture of the thigh; erysipelas and low typhoid fever (4 weeks).”
  - (5)\* A woman 68. “Fracture of the femur (4½ months), bed-sores (45 days).”
  - (6)\* A woman 76. “Fracture of the neck of the thighbone (3 months).”
  - (7)\* A woman 64. “Fractured arm—mortification (3 days).”

DROWNING:—

  - (8)\* A man 53, butler. “Found drowned without marks of violence—no evidence how.”
  - (9)\* A boy 14, marine apprentice. “Accidentally drowned by falling from a boat.”
  - (10) A male, apparently a sailor (age unknown). “Found dead in the River Thames—cause unknown.”
  - (11) A male, rank or profession and age unknown. “Found dead in the West India Dock Lock.”
  - (12) A boy 16. “Accidentally drowned in the River Thames, by falling overboard from the ‘Niobe’ steam vessel.”
  - (13)\* A man 63, labourer. “Drowned, by what means no proof—without marks of violence.”
  - (14)\* A woman 25, brace-maker. “Accidentally drowned by the upsetting of a boat.”

BURNS and SCALDS:—

  - (15) A woman about 85. “Burn on the upper part of the body—clothes took fire from a candle (5 days).”
  - (16) A boy 3. “Inflammation of the mouth and alimentary canal, in consequence of drinking boiling water.”

\* The returns of fractures (Nos. 4, 5, 6, 7) give no information of the cause and other circumstances of the injuries, and are therefore imperfect. In the cases of drowning (8, 9, 13, 14), the name of the river or other water should have been stated.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

*During the Week ending Saturday, October 18th, 1845.*

The height of the ceterm of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by referring a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky which are covered by clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers are placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9h. A.M. and are therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whereas anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "positive," and - is read "negative," and - is read "lower," than the average.

† The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Breadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

† The MEAN direction of the wind for the Week is S.W.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, October 25th.*

TO WHICH IS ADDED :

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS, are comprised the 34 Districts abovementioned, which include the City of London *within* and *without* the Walls, the City and Liberties of Westminster, the *Out Parishes* within the Bills of Mortality;—and the Parishes of St. Marylebone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831 was 1,627,980; and in June 1841, 1,915,104.

2.—Under *small pox* is included “chicken pox (8 days), hooping cough (6 days),” a male 2 years. Under *typhus*, two cases which occurred at Woolwich of “yellow fever, accompanied by black vomit,” males aged respectively 17 and 24 years. Under *atrophy*, “want of breastmilk,” a male 3 months; “premature birth and debility, being unable to take breastmilk,” a male 27 days; “debility, brought up by hand, a male 7 weeks;” “atrophy, from the sudden deprivation of breastmilk,” a female 5 months; and “want of proper nutrition from birth,” a female 17 days. Under *malformation*, “nonclosure of the foramen ovale from birth,” a female 3 weeks; “pneumonia in connexion with congenital cyanosis,” a male 3 months; “spina bifida—convulsions,” a male 6 days; “spina bifida (2 months), hydrocephalus (5 weeks),” a female 2 months; and “imperforate anus,” a male 5 weeks. Under *insanity*, “mania from lactation (2 weeks),” a female 26 years. Under *bronchitis*, “chronic bronchitis (30 years), granular disease of kidneys (2 years), diseased mitral valve and anasarca,” a female 59 years. Under *pneumonia*, “pneumonia—phlebitis, pus in the right femoral vein, also in the elbow joint of left arm, with ulceration of cartilage,” a male 30 years. Under *phthisis*, “phthisis (20 years), pneumothorax (3 days), œdema of the left half of the body,” a female 28 years; and “laryngeal phthisis (6 weeks),” a male 49 years. Under *disease of the heart*, “angina pectoris,” a female 79 years; “ossified heart and Bright’s disease of the kidneys, anasarca,” a male 33 years; and “hypertrophy of the heart, granular disease of the kidneys (3 years),” a male 45 years. Under *worms*, “infantile fever, with inflammation of the chest (6 days),” a female 9 months. Under *stone*, “very large stone in the bladder—abscesses throughout the whole structure of the left kidney—no traces of a right kidney (some years),” *post mort.*, a male 27 years. Under *disease of the kidneys*, “granular disease of the kidneys (6 months),” *post mort.*, a female 29 years; and “Bright’s disease of the kidneys,” a female 30 years. And under *disease of the joints*, “caries of the spine (2 years), lumbar abscess (6 months), diarrhœa (2 months),” a male 7 years.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A boy 5, son of a carman. “Fracture of the temporal bone by falling from a ladder 8 feet; rupture of the middle meningeal artery, 13 hours,” *p. mort.*
- (2) A girl 2. “Injury of the head from a fall (1 month), hydrocephalus (3 weeks).”
- (3) A boy 1. “Accidentally run over by a cart wheel in the Stoke Newington-road, which caused fracture of the skull.”
- (4)\* A boy 1. “Injury of the scalp (5 weeks), inflammation of the brain and membranes (4 days).”

### WOUNDS:—

- (5) A woman 28, wife of a cooper. “Suicide—cut her throat with a razor, being at the time of unsound mind.”

### HANGING and SUFFOCATION:—

- (6) A man 34, licensed victualler. “Hung himself.”
- (7) A boy, a few minutes. “Suffocation by lying with its face downwards for want of assistance at the time of birth.”

### BURNS and SCALDS:—

- (8) A girl 5. “Accidental death by burns from her clothes taking fire.”
- (9)\* A woman 80, fire work manufacturer. “Burnt to death.”
- (10) A boy 1, son of a coal dealer. “Scalded by pulling a mug of boiling water on his person accidentally (14 days).”

### POISON:—

- (11) A woman, 32. “Poisoned herself by oxalic acid in a temporary state of insanity.”

\* Nos. 4 and 9 are imperfect returns. The cause, place, and other known circumstances of the injury in each case, should have been stated.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

General Register Office, Tuesday, October 28th, 1845.

*During the Week ending Saturday, October 25th, 1845.*

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of the Sundays.

The readings of the two self-registering thermometers, the one placed on grass and the other placed on grass fully exposed to the sky, are taken on entering at 10h. A.M., and therefore exhibit the highest and lowest readings respectively that have occurred at the place during the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the observations are recorded.

Wheeler's anerometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anerometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

ANNUAL SERIES.

## NOTES.

1.—Under *diarrhœa* is included "convulsions from diarrhœa from birth—deprivation of breastmilk," a female aged 8 months. Under *typhus*, "measles (4 days), typhus (10 days), from defective ventilation, seven persons living and sleeping in one room," a female 5 years. Under *atrophy*, "want of breastmilk," a male aged 7 weeks, and two females respectively 16 days and 10 months. Under *malformation*, "malformation of the heart, the foramen ovale not closed, also a communication between the ventricles," *post mort.*, a male 4 years; and "cyanosis," a male 1 day. Under *laryngitis*, "laryngismus stridulus—tabes mesenterica (5 weeks)," a female 4 months. Under *phthisis*, "inadequate supply of food—phthisis pulmonalis (1 month)," a female 2 months. Under *colic*, "colica pictonum," a male 33 years. Under *disease of the kidneys*, "albuminuria (6 months), dropsy (5 weeks)," a male 25 years; "anasarca and granular kidneys," *post mort.*, a male 65 years; and "albuminuria, morbus cordis," a male 46 years. And under *privation*, "debility, effusion on the brain from exposure to cold (4 months)," a female 32 years; and "want of the common necessities of life (inquest)," a female 75 years.

2.—The following are the causes of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 34, carman to a carrier of goods. "Injury of the head from falling down stairs, on the 26th October."
- (2) A man 22. "Accidental fall from a stage into a beer-vat, while resting against the railing asleep or intoxicated."
- (3) A man 28, seaman. "Injuries to the spine by an accidental fall from the mainyard of the brig 'Harriet,' in the River Thames, off the Royal Arsenal—lived 36 hours."
- (4) A woman about 23, spinster. "Fracture of her skull by falling down in Blackfriars-road, but no evidence of the cause of the fall—lived 30 hours." *post mort.*
- (5) A man about 39, carman. "Internal injuries from being run over accidentally by a coal-waggon on Woolwich Common—lived 10 minutes."
- (6) A man 30. "Concussion and contusion of the brain—fell with his horse, in the dark, over a heap of gravel left unprotected in Portland-place, Clapton—14 days." *p. mort.*
- (7) A man 51, Chelsea pensioner. "Falling down under a carriage in High Holborn whilst attempting to pick up his hat—fractured ribs, laceration of liver and spleen, and effusion of blood on the brain caused by the horses' feet and carriage wheel going upon him—died in a few minutes." *p. mort.*
- (8) A boy 14, son of a labourer. "Fracture of his skull—thrown down and run over by a waggon, which ran against a truck drawn by deceased, in Aldermanbury."
- (9) A boy 5, son of a last maker. "Fracture of his skull by an omnibus wheel at Ludgate hill, whilst attempting to run across the street—lived 10 hours."
- (10) A man 38, labourer. "Compound dislocation of his left ankle, and compound fracture of his right foot by a ballast engine passing over them while he was trying to get on the engine on the Croydon railway—after amputation lived 9 hours."
- (11) A boy 4, son of a silversmith. "Mischiefs to his brain—but no evidence of the cause."
- (12) A girl newly born, rank or profession of parents unknown. "Injuries of the brain from a blow—wilfully murdered by some person or persons unknown—born without medical aid." *post mort.*

### WOUNDS:—

- (13) A woman 39. "Injuries of the intestines wilfully inflicted, through a rent made in the vagina by James Hawkins, her medical attendant in child-bed—against whom a verdict of manslaughter."

### DROWNING:—

- (14) A man 43, mate. "Drowned by falling off a ladder in getting on board a schooner called the 'Lady Ann,' at Gunshot wharf—body under water half an hour."
- (15) A man 22. "Found dead in the inner basin in Her Majesty's Dockyard—no marks of violence."

\* The information contained in No. 17 is not specific. Was the person found under water? In No. 32, the means which had apparently been employed to cause death, should have been stated.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

- (16) A woman 23. "Suicide—drowned herself in the River Thames, being in a state of mental derangement."
- (17)\* A man 42, watchman. "Found dead at the bottom of the dock."

### HANGING and SUFFOCATION:—

- (18) A woman 28, under house-maid. "Hanged herself—insane."
- (19) A man 25. "Asphyxia—hanged himself by a rope to a peg in his cell, while in a state of temporary insanity."
- (20) A man 47, gardener. "Suicide by hanging—not known to be insane—an habitual drunkard."
- (21) A man about 40, bootmaker. "Temporary insanity—hanged himself with a handkerchief to a bracket over a window."
- (22) A man 54, formerly a grocer, latterly a coach-porter. "Strangulation by a cord fastened to a hat-peg in the wall, the body resting on the bed—not discovered for several hours—temporary insanity."
- (23) A man 25, bricklayer. "Suffocation from a sudden fall of earth upon him, while laying bricks in a sewer."
- (24) A girl newly born. "Suffocation at birth in the uterine fluids, from want of medical aid at the time, the birth being unexpected."

### BURNS:—

- (25) A woman about 47, wife of a labourer, "Burnt by her apron catching fire, whilst fanning a fire at Arnold's Paragon, Newington—lived 24 hours."
- (26) A girl 2, daughter of a glass-cutter. "Burnt by her night gown taking fire, while playing with fire at Gunpowder Alley—lived 3 hours."
- (27) A girl 6, daughter of a leather dresser. "Burnt by her pinafore taking fire, whilst about to light a fire at Brunswick Court, Bermondsey—lived 12 hours."
- (28) A boy 5, son of a labourer. "Burnt by his pinafore taking fire, whilst playing with some lucifer matches at Green Dragon Court—lived 27 hours."
- (29) A girl 3, daughter of a labourer. "Burnt by her frock taking fire from some lighted shavings at Camden Court, Milton Street, St. Luke's—lived 24 hours."
- (30) A girl 5, daughter of a shoemaker. "Burnt by a fire kindled in a straw hut near Robert's Bridge, Sussex, whilst sleeping on a straw bed therein—lived 3 weeks."

### POISON:—

- (31) A woman 48, wife of a clerk. "Poisoned by accidentally drinking some essential oil of almonds at Bennet's Hill—lived half an hour."

### MEANS NOT STATED:—

- (32)\* A girl newly-born, rank or profession of parents unknown. "Wilfully murdered by some person unknown."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, November 1st, 1845.*

[illegible]

The height of the stem of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 4, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the sky covered by clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the self-registering thermometer are the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

When the aneroid (from the indications of which the estimation of horizontal movement is made) is read at 10 h. a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the aneroid is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

A TABLE

NOTE.—No Return has been received this week from the Registrar's District of St. Botolph, in the DISTRICT OF EAST LONDON, in consequence of a vacancy in the office of Registrar. As an approximation to the true number of births, and deaths by various causes, the return of the previous week, containing 16 of the former, and 13 of the latter, has been used instead.

## NOTES.

1.—Under *small pox* is included “inflammation of the lungs, followed by inflammation in the head, occurring during an attack of chicken pox,” a female aged 1 year. Under *atrophy*, two cases of “want of breastmilk,” a male 5 months, and a female 3 months. Under *malformation*, “malformation—deficiency of the roof of the mouth,” a male 4 months. Under *cephalitis*, “chronic myelitis,” a female 41 years. Under *quinsey*, “diphtherite (10 days),” *post mort.*, a male 6 months. Under *phthisis*, “phthisis laryngea (18 months),” a female 38 years. Under *disease of the organs of respiration*, “chronic inflammation—ulceration and thickening of glottis and neighbouring parts about 16 days,” *post mort.*, a female 1 year. Under *worms*, “infantile remittent fever,” a female 1 year. Under *stricture of the intestinal canal*, “a plum stone causing stricture of the bowels,” a female 45 years. Under *disease of the kidneys*, “Bright’s disease, with dropsy (1 year), diseased lungs, with hæmorrhage (3 weeks),” a male 40 years; and “granular disease of the kidneys,” a female 38 years. Under *disease of the skin*, “eczema of the scalp (10 months), inflammation of the membranes of the brain (8 days),” a female 1 year; and “herpes (10 days), convulsions (1 hour),” a female 6 weeks. And under *privation*, “exposure to cold—pneumonia (14 days),” a female 8 months.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 52, labourer. “Hæmorrhage from rupture of the liver and vena cava inferior—knocked down and run over by a cart and one horse. The horse started on removal of the head-tackle by deceased.” *post mort.*
- (2) A man 80, retired carpenter. “Shock from fractured thigh and arm—knocked down by a phaeton and one horse—12 days.” *post mort.*
- (3) A boy 8, son of a carter. “Fractured skull and laceration of the brain—knocked down and run over in the Bayswater-road by a cart and one horse. The horse ran away, having been left unattended—8 hours.” *p. mort.*
- (4) A man 43, carter. “Fracture of the skull—seized with giddiness and fell—was run over by a cart drawn by two horses—2 days.” *post mort.*
- (5) A woman 50, bed-sacking maker. “Inflammation of right lung, following lacerated wound of foot, and contusion of the head—knocked down and foot run over by a cart and one horse—12 days.” *post mort.*
- (6) A man 25, labourer. “Hæmorrhage from rupture of the right auricle of the heart—fell from a scaffold when at work at a building—3 hours.” *p. mort.*
- (7) A man 28, street porter. “Fractured skull and laceration of the brain—fell against the steps of a house in a struggle, when intoxicated, with another man—6 days.” *post mort.*
- (8) A man 29, labourer. “Fractured skull and rupture of the brain—fell from a tree at Ealing—5 hours.” *post mort.*
- (9) A girl 3. “Concussion of the brain from a fall (6 weeks) hooping-cough.”
- (10) A man 26, labourer. Scalp wound by an iron pipe falling from a scaffold when at work at a building—23 days.”
- (11)\* A woman 78. “Severe blow on the ribs (7 days) congestion of the lungs.”

### WOUNDS:—

- (12) A man 22. Gunshot wound—neerosis (2 years)."
- (13) A man 20. “Suicide with a musket fired into his mouth—no symptoms of insanity in his previous conduct.”

### DROWNING:—

- (14) A man 48, licensed victualler. “Drowned—ferry boat upset containing deceased and others—struck by a steam boat on a hazy evening.”
- (15) A man 61, gardener. “Found drowned in the river Thames, by what means unknown—no marks of violence.”

### SUFFOCATION:—

- (16) A boy 10 weeks. “Suffocated accidentally by his brother (aged 3 years) getting upon him, they being in bed together asleep.”

### BURNS and SCALDS:—

- (17) A boy 5, son of a carpenter. “Burn on the neck and chest—clothes took fire when standing on a fender, endeavouring to reach a mantle-piece—15 days.” *post mort.*
- (18) A boy 3, son of a laundress. “Burns of head and face, belly and thighs—clothes took fire when playing with lucifer matches—3 hours.”
- (19) A boy 1. “Accidental death by scalds, from the upsetting of a saucepan of boiling water.”
- (20) A boy 1. “Severe scald on head and face from boiling coffee (20 days), meningitis (10 days).”

### POISON:—

- (21) A woman 89, pauper in the workhouse. “Overdose of laudanum (2 drachms), which she had bought at a chemist’s to produce sleep.”

### MEANS NOT STATED:—

- (22)\* A woman 84. “Erysipelas from an accident (2 weeks).”

\* No. 11 is a defective return—it should have indicated the means by which the blow was inflicted, and whether accidental or otherwise. No. 22 is clearly imperfect, cause, nature, and place of the accident being omitted.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

General Register Office, Tuesday, November 11th, 1845.

The height of the easterly of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the aneroid, and the aneroid is considered to be coincident with the readings of the aneroid, by considering a clear sky to be represented by 10, and a cloudy sky by 10, and when partially cloudy, by estimating the number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 11h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer from the indications of which the estimation of horizontal movement is made is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — is read "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 44°·0; and the mean reading at 7h. 30m. p.m. was 49°·6; the mean readings at the Royal Observatory for the same times were 41°·9, and 47°·7, respectively.

† The mean direction of the wind for the Week is S.E., but during a large portion of the time it was calm.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, November 15th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

## NOTES.

1.—Under the term METROPOLIS are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Mary-le-bone; St. Pancras; Kensington; Fulham; Hammersmith; St. Luke, Chelsea; Paddington; St. Mary, Stoke Newington; St. Leonard, Bromley; St. Mary-le-bow; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Streatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—Under *hydrophobia* is included “hydrophobia, caused by the bite of a rabid dog 5 months before,” a male aged 17 years (inquest). Under *atrophy*, three cases of “want of breastmilk,” a male 7 weeks, and two females, both under 1 year. Under *malformation*, “spina bifida—convulsions (1 day), a female 8 days.” Under *disease of the digestive organs*, “physconia,” a female 73 years. Under *disease of the kidneys*, “albuminuria—cystirrhæa—enlarged prostate (under treatment, 1 year),” a male 62 years. Under *disease of the joints*, “paralysis from caries of 2nd cervical vertebra,” a female 24 years. And under *disease of the skin*, “impetigo (4 months),” a male 8 months.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A boy 2. “Accidentally killed by the wheel of a cart, causing a fracture of the skull and instant death.”
- (2) A boy 3, labourer's son. “Accidentally run over by a cart, causing a lacerated thigh and fractured leg, in Whitechapel High street.”
- (3) A man 43, master wheelwright. “Inflammation of the brain, resulting from injuries by being thrown from a cart accidentally—4 days.”
- (4) A girl 3, daughter of a tailoress. “Concussion of the brain by an accidental fall from a window—died in a few hours.”
- (5) A man 55. “Natural death, accelerated by an accidental fall at the house in which he died.”
- (6) A man 63, labourer. “Accidental from fractured skull, by a fall down a ship's hold at the West India Docks.”
- (7) A man 35, coach-wheeler. “Accidental from a fractured skull by a fall from a loft in Whitechapel.”
- (8) A man 34, millwright. “Accidental death by a fall down a ship's hold—immediate death.”
- (9) A boy 6, son of a Custom-house Officer. “Inflammation of the membranes of the brain, produced by a fall against a brick, whilst running, which wounded his head—lived 3 weeks.”
- (10) A man 36, sugar baker. “Accidental from a fractured skull, caused by a fall of sugar.”

### WOUNDS:—

- (11) A man 47, grocer and tea-dealer. “Cut his throat, being at the time of unsound mind—died immediately.”
- (12) A girl, newly-born. “Scalp torn away, and brain protruding—no evidence how or by whom the injuries were inflicted.”  
post mort.

### DROWNING:—

- (13)\* A man 45, silk weaver. “Found dead in the Regent's Canal.”

### SUBMERSION:—

- (14) A man 52, labourer. “Natural—the deceased fell by accident into the Surrey Canal at Peckham; and his constitution being injured by intemperance, he became ill from remaining in the water, and died in about two days.”

### HANGING AND SUFFOCATION:—

- (15) A woman 63. “Hanged herself (being insane) with a rope to a peg on a cupboard door in her bed-room.”
- (16) A woman 59. “Hanged herself in a temporary state of insanity.”
- (17) A woman, age unknown. “Hanged herself in a temporary state of insanity.”
- (18) A girl 4 months. “Congestion of the brain caused by the strings of the night cap being too tight.”

### BURNS and SCALDS:—

- (19) A girl 3. “Accidental from burns from her clothes taking fire.”
- (20) A girl 5. “Accidental from burns from her clothes taking fire.”
- (21) A boy 3. “Accidental from scalds by drinking water from a tea-kettle.”

### SWALLOWING POISON or OTHER SUBSTANCES:—

- (22) A boy 2. “Gastric irritation, produced by the child having swallowed a copper coin—effusion into the lateral ventricles.”  
post mort.

\* In No. 13 it should have been stated either how the person came into the water, or that there was no evidence as to the fact.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

General Register Office, Tuesday, November 18th, 1845.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, November 15th, 1845.

1845 Day	Phases of the Moon	Readings of Thermometers										Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years			WIND				Rain in inches, read at 9 o'clock the next morning	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS

**MEANS.** 29-530 49-1 38-6 44-8 43-3 60-4 33-7 47-3 1-5 3-0 0-3 + 0-9 + S.E.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, by the exhibition of Sundials. The readings of the two self-registering thermometers, the one placed in the air, and the other placed on grass fully exposed to the sky, are taken every morning at 9h. a.m., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Wheeler's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 42-9, and the mean reading at 7h. 30m. p.m. was 47-0-1; the mean readings at the Royal Observatory for the same times were 42-9, and 45-0-2 respectively.

† The MEAN direction of the wind for the Week is S. by E., but principally calm.

November 9. At times cloudless; at other times acid and curri.

November 10. Rain falling during the day, and at times positive electricity; and during that of the positive, the sky was at times overcast, and at other times clear.

November 11. The same as on the 10th day.

November 12. Generally cloudy in the morning. - See General Remarks.

November 13. See General Remarks.

November 14. Rain falling when fog till noon. Overcast till 6h. p.m. Broken clouds and sea fog till 8h. and a dense fog afterwards till midnight.

November 15. Rain falling when fog till noon. Overcast till 6h. p.m. Broken clouds and sea fog till 8h. and a dense fog afterwards till midnight.

ANNUAL SERIES.  
VI.

1845.—No. 47.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, November 22nd.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—Under *hemorrhage* is included "natural death, sudden rupture of the internal saphena vein of left leg," a male aged 55 years. Under *scrofula*, "scrofula (3 years), impetigo from bad nourishment (2 months)," a male 3 years. Under *cancer*, "schirrus of oesophagus (10 months), exhaustion from want of food," a female 59 years. Under *malformation*, "cyanosis," a female 14 hours. Under *paralysis*, "neuralgia—paralysis (14 days)," a male 58 years. Under *laryngitis*, "laryngismus stridulus (5 weeks)," a male 8 months. Under *phthisis*, "phthisis—pneumothorax (4 hours)," a male 44 years; and "hectic fever," a male 24 years. Under *peritonitis*, "strangulation of the colon from a band of organised lymph thrown out from inflammation of the peritoneum of long duration" (a prostitute), a female 23 years. Under *jaundice*, "ecthyma (1 week), infantile jaundice (3 days)," a male 7 weeks. Under *disease of the liver*, "gallstones (4 days), congestion of the lungs (2 days)," a female 84 years. Under *disease of the kidneys*, "granular disease of the kidneys—dropsy—bronchitis," a male 33 years; and "albuminuria—bronchitis chronica—anasarca," a male 39 years. Under *disease of the joints, bones, &c.*, "exfoliation of the bones of the skull," a female 28 years. And under *privation*, "want," a male 1 month.

3.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES AND CONTUSIONS:—

- (1) A male 20, farmer's labourer. "Mortification and stoppage of the bowels—paralysis of lower extremities, bladder, &c. from injury of the lower part of the spine, by a fall from a ladder 2 months ago."
- (2)\* A boy 2. "Inflammation on the brain from concussion consequent on an accidental fall." *p. mort.*
- (3)\* A man 77. "Fracture of the humerus and exhaustion by a fall, (6 weeks)."
- (4) A woman 74, widow of a watchmaker. "Erysipelas and debility consequent on fracture of the arm by a fall from a bed in trying to reach a chair."
- (5) A man 46, labourer at coal-wharves. "Crushing of the abdomen and chest by a waggon wheel—fell before it while trying to prevent a dog from jumping out."
- (6) A woman 65, widow. "Injury to her chest by having been run over by the wheel of a cart."
- (7)\* A man 28. "Fractures (13 weeks) cystitis; typhus fever (4 days)." *post mort.*
- (8)\* A girl 9. "Chronic cephalitis—blow on the head 2 months since—coma—paralysis of the right arm and leg."

### DROWNING:—

- (9) A man 49, butcher. "Found dead in the Regent's Canal with marks but not mortal."
- (10) A man 35, lighterman. "Accidentally drowned by falling from the gangway of a barge."
- (11) A man 23, labourer. "Accidentally drowned by falling from a piece of timber on the Thames."
- (12) A man 52, fellowship-porter. "Drowned accidentally by falling out of a barge into the River Thames."

\* In Nos. 2 and 3, *place* and other circumstances in which the falls occurred should have been stated. Nos. 7 and 8 are obviously imperfect, the *cause* of injury being omitted.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

THE REGISTRARS are requested, in returning the cases which form the weekly list of *violence*, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add "rank or profession unknown."

General Register Office, Tuesday, November 25th, 1845.

- (13) A man supposed to be 25, profession unknown. "Drowned, by what means unknown, without marks of violence; found in the River Thames at Bermondsey."
- (14) A man 27, seaman. "Drowned by falling into the Surrey Canal Lock accidentally."
- (15) A girl 6. "Drowning in a tank of water, into which she had accidentally fallen."

### HANGING AND SUFFOCATION:—

- (16) A man 46, cooper. "Suicide by hanging himself, being of unsound mind."
- (17) A girl, 1 month. "Suffocation when taking the breast."

### BURNS:—

- (18) A girl 4, daughter of a wheeler. "Burns from her clothes taking fire while reaching an image on the mantelpiece—lived 1 day."
- (19) A boy 11. "Accidentally burnt to death from the house being on fire."
- (20) A boy 5, son of a blacksmith. "Accidental burn caused by his night-gown taking fire at the stove—lived 36 hours."
- (21) A girl 6, daughter of a labourer. "Burns on the body and arms—clothes took fire from a fire in the grate, when endeavouring to reach the mantelpiece, 1 day."
- (22) A woman 42. "Accidentally burnt to death from the house being on fire."

### NEGLECT:—

- (23) A girl newly born. "Neglect at birth—wilful murder against persons unknown—had been placed on a fire after death, and burnt."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, November 22nd, 1845.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 10, and when partially cloudy, by estimating a number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, and the exact number of clouds, fully or partly covered, are taken every morning at 9 a.m., and the other placed on grass have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer from the indications of which the estimation of horizontal movement is made, is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

<sup>a</sup> In reading the 16th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under

the superintendence of Lieutenant Sanders, R.N. Superintendent of the Dreadnought. The mean readings of a thermometer placed on the Royal Observatory for the same times were 44.9, and 43.6, respectively.

† The mean direction of the wind for the Week is S.W.

November 16. The day was generally overcast, and rain falling in dashing showers occasionally.

November 17. Rain falling after 3h. a.m. Cirrostratus and scud nearly covered the sky till 11h. a.m. Cirrostratus, light scud, and fleecy clouds were prevalent till 1h. p.m. The sky was then overcast for some time, and it was nearly cloudless from 3h. p.m. to 9h. p.m., and overcast afterwards.

November 18. Overcast till 2h. 30m. p.m., the Moon and Jupiter being occasionally visible. From 2h. p.m. rain was falling till after 5h. a.m. Overcast between that time and 6h. p.m., and cloudless afterwards.

November 19. Cloudless till 4h. 20m. a.m. Cirrostratus and scud from 4h. to 2h. From that time rain was falling for some time. After 4h. a.m. overcast till after 3h. p.m., with occasional rain falling. Cloudless after 6h. p.m. Between 6h. and 8h. many flashes of lightning were seen.

November 20. Nearly cloudless till 3h. a.m., and after this time the amount of cloud was very variable, but other than covering nearly the whole sky. Towards midnight it was cloudless.

November 21. Rain falling when negative. Rain falling after 3h. a.m. Generally overcast afterwards.

November 22. Overcast till 2h. a.m. Broken clouds variable in amount afterwards throughout the day. Several flashes of lightning throughout the day.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, November 29th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:  
HARTNELL, PRINTER, RED LION COURT.

## NOTES.

1.—Under *atrophy* are included, “inanition about 14 days, from leaving off suckling all at once,” a male aged 3 months; and “ablatation—dentition (10 days),” a female 1 year. Under *malformation*, “*morbus coeruleus congenitalis*, malformation of the heart—pleuro-pneumonia—hydrothorax—hydrocephalus,” a male 5 years; “*pneumonia* (10 days) acute rheumatism of joints (3 weeks) disease of the heart, foramen oval patent from birth,” a male 9 years; “*anus imperforatus*,” a female 4 days; and “malformation of the bowels—no passage from birth,” a female 2 weeks. Under *convulsions*, “convulsions from deficient nutrition (6 hours) the mother suffering from puerperal fever at the time,” a female 6 days. Under *disease of the brain*, “effusion of matter on the surface of the brain from an abscess in the petrous portion of the temporal bone,” a female 33 years. Under *laryngitis*, “*laryngismus stridulus*,” a male 3 years. Under *phthisis*, “*phthisis pulmonalis*—cirrhosis of the liver—granular disease of the kidneys,” *post. mort.*, a female 34 years. Under *disease of the heart*, “*morbus cordis* (2 years), granular kidneys (2 months), *pneumonia* (4 days),” *post. mort.*, a male 38 years. Under *tabes mesenterica*, “*tabes mesenterica* from imperfect nutrition (4 months),” a male 10 months. Under *stone*, “*calculus* in the bladder—operation—convulsions after operation,” a male 3 years. Under *stricture*, “*stricture* of the urethra—enlarged prostate—false passage in the urethra leading to corpus spongiosum urethrae,” *post. mort.*, a male 68 years. Under *disease of the kidneys*, “*chronic bronchitis*—granular kidneys,” *post. mort.*, a male 65 years; “*albuminuria* followed by enlargement of the heart, anasarca and ascites (3 months),” a female 20 years; and “*morbus Brightii* (some years) *polypus vesicae* (many months),” a female 63 years. Under *ulcer*, “*ozæna*—mortification (18 months),” a male 18 months. Under *disease of the skin*, “*lupus* (8 years) *pneumonia*, *peritonitis* (2 days),” a female 11 years. And under *privation*, “*exhaustion*—refused nourishment since the day of her husband’s death 7 weeks ago,” a female 61 years. And under *causes not specified*, “seen by a medical man a few hours before death, with right arm enormously swollen from fingers to neck—cause unknown,” a male 1 year.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A man 35, labourer. “Fracture of the skull and laceration of the brain by falling from a scaffold when at work at a building in King’s-road, Chelsea—11 hours.” *post mort.*
- (2) A man 25. “Dislocation of the 6th cervical vertebra, caused by a fall down stairs while he was intoxicated.”
- (3) A boy 11. “*Pneumonia* 6 days after erysipelas of the knee, from a fall upon it by slipping down in the street 4 weeks previously.”
- (4) A man 75, butcher. “Compression of the brain by an accidental fall from a flight of stairs in a house, being intoxicated at the time.”
- (5) A woman 75. “Injuries of the head from an accidental fall while getting into bed.”
- (6) A woman 51, spinster. “Fell from a window at No. 8, Orchard-place, (29th Sept. 1845) in a state of temporary insanity, and died 23rd Nov. from concussion of the brain.”
- (7) A boy 5. “Injuries of the head by being run over by a van out of which he had fallen when asleep.”
- (8) A man 27, carman. “Compression of the brain by a fall from a horse which he was riding from Pentonville.”
- (9) A woman 80. “Sanguineous cerebral apoplexy, produced by reaction attending injuries of the leg and shoulder, from being accidentally run over in Hart-street, Bloomsbury, on August 25th, by 2 horses in an omnibus—quite deaf.”

### DROWNING:—

- (10)\* A man 22, carpenter and joiner. “Found dead without marks of violence—apparently drowned.”

### HANGING and SUFFOCATION:—

- (11) A man 32, East India Company’s army pensioner. “Hanged himself—no positive proof as to the state of his mind at the time.”
- (12) A man supposed about 26. “Temporary insanity—suffocated himself with charcoal in his bedroom, having stopped up the chimney crevices.”

### BURNS and SCALDS:—

- (13) A boy 2, son of a earman. “Accidentally burnt by his clothes taking fire.”
- (14) A boy 2, son of a labourer. “Scalds of the chest, belly and thighs—fell from a chair endeavouring to reach the mantle-piece, knocked down and upon him a pot of boiling coffee from the fire.” *post mort.*
- (15) A boy 3. “Scalds by boiling water drunk from a kettle at the fireside—about 6 hours.”
- (16) A girl 11 months. “Scalding—the mother in preparing food let a saucepan fall, when the food ran on the face and neck, the child being for convenience placed on the floor beneath—death in 2 days.”

### POISON:—

- (17) A woman about 45. “Temporary insanity—suicide by prussic acid—10 minutes.” *post mort.*
- (18) A man 34. “Essential oil of bitter almonds—suicide—temporary insanity—about 10 minutes.” *post mort.*
- (19) A man about 40. “Suicide with oil of vitriol—2 oz. swallowed—death in 15 hours—stomach extensively marred.”
- (20) A woman 46. “Suicide with landanum—how much taken unknown—lived 5 hours—no evidence of insanity—in distress respecting debt.”

\* In No. 10, the name of the river, canal or other water in which the person was found, should have been stated.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

THE REGISTRARS are requested, in returning the cases which form the weekly list of violence, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add “rank or profession unknown.”

General Register Office, Tuesday, December 2nd, 1845.

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, November 29th, 1845.

The height of the eastern of the barometer is considered to be 359 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated, by observing a clear sky to be represented by 10, a cloudy sky by 10, and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 10 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and - is read "LOWER," than the average.

The thermometers usually suspended from the side of the Dreadnought, and used in deducing the temperature of the water of the Tames, have been in the instrument-maker's hands for repair during the week. The mean readings of a thermometer placed on the

mainmast, and read each day at 6h. 30m. a.m., was 49.3; and the mean reading at 7h. 30m. p.m. was 49.3; the mean readings at the Royal Observatory for the same times were 49.7, and 49.7, respectively.

† The mean direction of the wind for the Week was N.W. for the first two days, and W. by S. for the remainder of the week.

‡ ENGLISH IS THE LAST QUARTERLY TABLE.—In the table p. 4, against "Quarter ending March 1844," column 20th, for (-4.3) read (-0.3). The error was copied from the 1st Quarterly Meteorological Table of 1844, which also requires correction.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,  
SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, December 6th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## NOTES.

1.—Under *syphilis* is included “jaundice (6 weeks), coma, violent delirium (1 week), syphilis, suppression of biliary secretion from dis-organization of the hepatic cells,” a male aged 17 years. Under *cancer*, “hard cancer of omentum (5 months); it weighed 25lbs., instead of its usual weight for the age—4oz.,” *post mort.*, a female 13 years. Under *atrophy*, “inanition from want of sufficient nourishment—convulsions,” a female 2 years; and “born between the 7th and 8th months of gestation, and being without breastmilk,” a male 4 weeks. Under *malformation*, “imperfection of the roof of the mouth, which prevented it from taking proper nourishment,” a female 3 months; “malformation of the mouth, and consequent atrophy,” a female 2 months; “foramen ovale of the heart not closed,” *post mort.*, a female 2½ days; “cyanosis,” a female 11 days; and “malformation of the bowel, the colon terminating in a blind pouch,” a male 3 days. Under *disease of the heart*, “dilatation and softening of the heart—granular kidneys,” *post mort.*, a female 59 years. And under *disease of the digestive organs*, “dyspepsia and pyrosis (9 months), jaundice (9 days),” a male 62 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A woman 55, wife of a tailor. “The effects of a fractured leg, by falling down in her room in Brunswick-street—lived 21 days.”
- (2)\* A woman 24, spinster. “Fracture of the skull from a fall whilst intoxicated—lived 10 minutes.”
- (3) A man 42, surgeon. “Serous effusion on the base of the brain by an accidental fall from a gig—lived 14 days.” *post mort.*
- (4) A man 35, ostler. “Delirium tremens, from bodily injuries by the off-wheel of a carriage passing over him accidentally.”
- (5) A man 59, millwright and engineer. “Fracture of his skull by a block of wood falling on him in the brig ‘Juliana’ at Wool Quay, whilst shipping iron.”
- (6) A man 25. “Injury of the head and spine by various falls from horses—typhus fever—ill 2 years.”
- (7) A man 18, servant to a grocer. “Run over by a cart at Kennington Cross, by getting out of the same whilst in motion; fracture of his ribs and penetration of his lung—lived 1 day.” *post mort.*
- (8) A boy 12, son of a man employed at a stable-yard. “Fracture of his ribs and laceration of his lung by being jammed between an omnibus and a gate-post at Unicorn Yard—lived 1 hour.”
- (9) A man 25, brewer’s servant. “Delirium tremens, brought on by fracture of his leg and arm, being run over by his dray at Newington Butts, whilst intoxicated—lived 6 days.” *post mort.*
- (10) A man 22, smith. “Injury to his spine and shock to the nervous system, caused by being knocked down and run over by a ballast train on the Croydon Railway—lived 2 hours.” *post mort.*
- (11) A man 50, waterman and lighterman. “Fracture of his pelvis by being jammed between a barge and one of the piers of Blackfriars’ Bridge, whilst shoving a boat astern from the barge—lived 2 days.” *post mort.*

### WOUNDS:—

- (12) A man 47, carman. “Puncture by a rusty nail in the heel—(14 days), traumatic tetanus (5 days).”

### DROWNING:—

- (13) A boy 13, sea-apprentice. “Found dead without marks, apparently drowned.”
- (14) A boy 7, son of a labourer. “Accidentally drowned by falling into the River Lea.”

- (15) A man 53, boatswain of Fenning’s wharf. “Drowned by falling off Fenning’s wharf into the River Thames—under water a few minutes.”
- (16) A woman 51, wife of a silk manufacturer. “Found dead without marks—apparently drowned in Sir John Duckett’s Canal.”

### HANGING AND SUFFOCATION:—

- (17) A man 22. “Hanged himself in a temporary state of insanity.”
- (18) A man about 46, porter. “Temporary insanity brought on by intoxication—strangulation with a cord when in bed intoxicated.”

### BURNS:—

- (19) A woman 84, wife of a labourer. “Burns received by her clothes accidentally taking fire—lived 3 weeks.”
- (20) A girl 6, daughter of a hawker. “Burnt by her frock taking fire, whilst at play in her father’s room at Bird-cage Alley—lived 13 days.”
- (21) A girl 7, daughter of a labourer. “Burnt by her pinafore taking fire from a hot cinder, which flew from the fire upon it at Great Tower-street—lived 30 hours.”
- (22) A woman 40, independent spinster. “Burns on the legs and body—clothes took fire from a rushlight in a shade on the floor of her bed-room—7 hours.”
- (23) A boy 4, son of a labourer. “Burned by his pinafore catching fire, whilst taking a cabbage leaf off the fire at Green-bank—lived 30 hours.”
- (24) A man 28, gunner in the Rocket Troop, Royal Horse Artillery. “Lock-jaw from an accidental injury to the right hand by the sudden explosion of gunpowder from a cannon whilst being loaded—lived 8 days.”

### POISON and MEDICINES IMPROPERLY GIVEN:—

- (25) A boy 2 months, son of a warehouseman. “Natural death, which may have been accelerated by a medicine given for whooping cough, containing opium.”
- (26) A boy 5, son of a comb-maker. “Natural death, accelerated by the deleterious effects of a medicine for whooping-cough, improperly applied, without proper medicines to neutralize such deleterious effects.”
- (27) A woman 19, housemaid. “Suicide—laudanum ½ ounce—not known what was the state of her mind.”

\* In No. 2, the place of the accident should have been stated: e.g., on the street or in a dwelling-house.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained. THE REGISTRARS are requested, in returning the cases which form the weekly list of violence, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add “rank or profession unknown.”

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, December 6th, 1845.

1845 Day	Phase of the Moon	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature				WIND				Rain in inches, read at 9 o'clock Mean Amount of Cloud, 0-10	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS

to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12	Mean from from 12 to 12

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10, and a sky overcast by 100. The number of tenths of the whole sky covered with clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass have occurred in the previous 24 hours. They are, however, placed here opposite the highest and lowest readings respectively that thermometers are read.

Whevel's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. This instrument was placed in the water on Wednesday, at 1h. p.m., after repairs. The readings of this instrument are registered under the superintendence of Lieutenant Sinders, R.N., Superintendent of the Dreadnought. The mean readings of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 43°·3; and the mean reading at 7h. 30m. p.m. was 43°·9; the mean readings at the Royal Observatory for the same times were 40°·2, and 41°·1, respectively.

† The MEAN direction of the wind for the week is S.W. by W.

The sky was nearly cloudless throughout the day.

Overcast, with rain falling occasionally until 10h. a.m.; after that time the rain continued to fall, and the sky was overcast until 10h. p.m.; however, became overcast after 7h. 30m. p.m., and continued so till midnight.

Overcast until 3h. 20m. a.m.; the sky was almost cloudless from that time until after noon. Rain was falling at 4h. p.m., and the sky was principally cloudless until 10h. p.m., when it became overcast again. Rain was falling from 9h. 20m. p.m. till midnight.

Rain continued falling until after 9h. 20m. a.m., with strong gusts of wind frequently. The sky continued overcast until after 7h. 20m. a.m., and during the day the greater part was covered with altostratus. About 8h. p.m. the clouds were broken, and a fine aurora was visible. The magnets were disturbed.

The aurora disappeared before 3h. 20m. a.m., and the disturbance of the magnet ceased about the same time; after that time until after 5h. 20m. a.m. the sky was one-half covered with cloud. During the morning the sky was generally cloudless, but after 10h. 20m. p.m. it became overcast again, with rain falling heavily till midnight.

The rain continued falling until after 4h. 20m. a.m.; from that time until after noon the sky was generally cloudless, but after 10h. 20m. p.m. it became overcast again, with rain falling heavily till midnight.

The sky was nearly cloudless until after 3h. 20m. a.m.; after that time till 10h. 20m. p.m. the sky was generally overcast. From 3h. p.m. until midnight the sky was cloudless.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, December 13th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:  
HARTNELL, PRINTER, RED LION COURT.

## NOTES.

1.—Under *remittent fever* is included "jungle fever, disease of the liver," a male 40 years. Under *scrofula*, "rickets (3½ years), congestion of the brain (10 hours)," a male 4 years. Under *malformation*, "spina bifida (18 days)," a male under 1 year; "malformation of the heart, enlarged liver (1 year), albuminuria, phthisis," a male 20 years; and "cyanosis," *post mort.*, a female 2 days. Under *disease of the brain*, "pressure of the brain from morbid growth of bone at the base of the skull (60 hours)," a male 27 years. Under *worms*, "infantile remittent fever (27 days), convulsions (3 days), serous effusion at the base of the brain," *post mort.*, a male 3 years. Under *ulceration of the intestines*, "calculus (phosphate of lime) in the appendix cæci vermiformis, ulceration of intestines, acute attack (6 days)," *post mort.*, a male 25 years. Under *disease of the kidneys*, "granular disease of the kidneys (several years), serous apoplexy (a few hours)," *post mort.*, a male 47 years. And under *disease of the skin*, "porrigo, diarrhæa (5 months)," a male 7 months.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A boy, newly born "Congestion of the brain immediately after birth, how produced unknown. Fracture of the parietal bones found, but not known whether produced by a fall at birth, or a fall after death."
- (2) A man about 23, labourer. "Erysipelas brought on in consequence of a scalp wound, caused by a fall whilst piling timber at Upper Ground-street—lived 9 days."
- (3) A man 16, apprentice-seaman. "Congestion of the lungs by falling into the Surrey Canal Dock, from the brig 'Boid,' of Newcastle, and by striking himself in the fall accidentally (4½ hours)."
- (4) A woman 67, widow of a farrier. "Fracture of the skull from a fall down stairs in the dark—instant death, not quite sober."
- (5) A woman 57, widow of a grocer. "Injury to her head by falling down stairs—lived 19 days"
- (6) A man about 75, saddler. "Accidentally thrust off the foot-path on London Bridge by a person passing in haste, and run over by a waggon, causing rupture of the diaphragm—died almost instantly." *post mort.*
- (7) A man 37, omnibus conductor. "Inflammation of the pleura and lungs, accelerated by a fall from an omnibus on London Bridge, in consequence of a strap breaking—lived 15 days." *post mort.*
- (8) A man 30, labourer. "Compression of his brain from being struck by the buffer of a steam engine on the Croydon railway, and thereby thrown against the wheel of a ballast waggon—lived 4 days."
- (9) A boy, part of 1 hour (parents unknown). "Found dead in the River Thames—wilful murder from hæmorrhage, owing to the navel-string not being tied, and from numerous blows on the head."
- (10)\* A man 81. "Fracture of the arm, fever sympathetic (9 days), effusion at the base of the brain."

- (11) A man 44, master mariner. "Exhaustion caused by inflammation of his right arm, brought on by a dislocation and mortification of his right thumb, but no evidence how it was occasioned." *post mort.*

### WOUNDS:—

- (12) A man 55, banker. "Suicide with a pistol in a water-closet, while of unsound mind, immediately after a failure in business. Shot through the heart."

### DROWNING:—

- (13) A man 61, rigger. "Accidentally drowned by a fall into the water."
- (14) A man 23, sailor. "Accidentally drowned by a fall into the water."
- (15) A man 38, labourer. "Inflammation of the lungs by immersion in the water, by accidentally falling into the Bull Head Dock at Rotherhithe, 4 days previous."
- (16) A girl 9 months; daughter of a banker's messenger. "Drowned by accidentally falling into a foot-pan, containing water."

### HANGING and SUFFOCATION:—

- (17) A woman 60, widow. "Temporary insanity—suicide—strangulation with a cord."
- (18) A boy 2, son of a servant, spinster. "Found dead in bed, apparently suffocated, without marks of violence."
- (19)\* A girl 5 weeks. "Found dead—apparently suffocated."

### BURNS and SCALDS:—

- (20) A girl 1, daughter of a labourer. "Burnt by her frock taking fire at Parker's Buildings, cause unknown—lived 7 hours."
- (21)\* A woman 91. "Scalds—10 days."

\* In No. 10, it should have been stated *how* the fracture was caused. In No. 19, should have been stated whether *in bed*, or in what other situation the child was suffocated. No. 21 is obviously an imperfect return.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

THE REGISTRARS are requested, in returning the cases which form the weekly list of violence, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add "rank or profession unknown."

General Register Office, Tuesday, December 16th, 1845.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated, by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 5h. A.M., and therefore exhibit the highest and lowest readings respectively that have been exposed in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometer is read, and are not, as is usual, placed here opposite to the day on which the observations are made.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Saunders, R.N., Superintendent of the Dreadnought. The mean readings of a thermometer placed on the masts, and read each day at 6h. 30m. a.m., was 37°·4, and the mean reading at 7h. 30m. p.m. was 40°·4, the mean readings at the Royal Observatory for the same times were 37°·1, and 39°·4, respectively.

† The mean direction of the wind for the first four days is W., and for the remainder of the week N.N.W.

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,

REGISTERED

*In the Week ending Saturday, December 20th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

---

LONDON:  
HARTNELL, PRINTER, RED LION COURT.

## NOTES.

Under *ague* is included, "intermittent fever quotidian, complicated with chronic bronchitis," a female aged 5 years. Under *typhus* "dothi-enteria (about 21 days)," a female 9 years. Under *purpura* "scorbutus (7 months) phrenitis (1 week)," a male 9 months. Under *scrofula* "rickets," a female 6 years. Under *cancer*, "chimney-sweeps' cancer (3 years)" a male 45 years. Under *atrophy*, "atrophy from loss of breastmilk (1 month)," a male 3 months; "atrophy from defective nutrition (10 days), catarrh (2 days)," a male 5 weeks; "atrophy without breastmilk from birth," a female 4 months; and "atrophy without breastmilk," a female 3 months. Under *malformation*, "spina bifida—convulsions," a male 7 months; cyanosis," a female 4 weeks; "opening of foramen ovale—prematurely born," a female 12 days; and "nonclosure of septum auricularum," a male 12 weeks. Under *laryngitis*, "laryngismus stridulus (30 days)" a female 9 months. Under *pleurisy*, "abscess of posterior mediastinum—pleuritis—Bright's disease (duration unknown)" a male 40 years. Under *pneumonia* "pleuripneumonia (20 days) splenization of inferior and posterior portion of left lung which was adherent throughout—heart collapsed and flabby—coma (2 days)—loss of use of right side—copious serous effusion into the ventricles, and beneath arachnoid which was thickened in pearly-white patches," *post. mort.*, a female 56 years. Under *disease of the heart*, "morbus cordis—morbus hepatis—Bright's disease," a male 40 years. Under *stricture of the intestinal canal*, "stricture of œsophagus (4 months)," a female 62 years. Under *disease of the digestive organs*, "inflammation of the mouth and tongue (4 days)," a female 12 days. Under *disease of the kidneys*, "granular degeneration of the kidneys (2 years)," a male 43 years. Under *disease of the skin*, "porrigo larvalis (21 days)," a male 7 weeks. And under *privation*, "natural death, accelerated by destitution," a male 53 years.

2.—The following are the cases of death by violence which appear in the present table:—

### FRACTURES and CONTUSIONS:—

- (1) A boy 1, son of a coal merchant. "Hydrocephalus following a fall from a table 3 months previously."
- (2)\* A man 70. "Effects of injuries accidentally received by being knocked down."
- (3) A woman 31, wife of a banker's clerk. "Suicide by throwing herself out of a window—insane for 3 months—was left alone at night by a nurse and relations."
- (4) A boy 6. "Hæmorrhage from rupture of the liver, caused by a cask accidentally falling on him from a dray."
- (5) A man 50, green-grocer. "Accidentally run over and killed on the spot by an omnibus in the City-road."
- (6) A boy 10, son of a labourer. "Knocked down and run over by a cart and one horse."
- (7) A boy 13, son of a female servant. "Crushing of the loins by a cart wheel while at play in the road, having been knocked down accidentally by the horse. Lived 15 minutes."
- (8) A man 28. "Injuries to his head caused by an accidental fall from a mare."
- (9) A man 18, son of a glass-cutter. "Injury to the spine caused by a blow with a stick, 8 years since, causing consumption."

### WOUNDS:—

- (10) A man 69. "Suicide by cutting his throat in temporary derangement."
- (11) A man 35, policeman. "Suicide by cutting his throat with a razor, being at the time of un-sound mind."
- (12)\* A woman 60. "Wound of the thigh."

### DROWNING:—

- (13)\* A boy 12. "Drowning whilst bathing out of his depth, being unable to swim."
- (14) A man 34. "Drowned by falling from a ballast lighter, whilst at work in the River Thames near Paul's Wharf—body under water 21 days."
- (15) A man 17, waterman. "Drowned by falling into the River Thames on 30th of August, in getting on board a steam-boat at Battersea."

\* In Return No. 2 should have been stated the cause of the accident. No. 12 should have indicated the cause and nature of the wound. In Nos. 13 and 17 the name of the river or other water should have been stated.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

THE REGISTRARS are requested, in returning the cases which form the weekly list of violence, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add "rank or profession unknown."

General Register Office, Tuesday, December 23rd, 1845.

- (16) A woman 46, laundress. "Drowning in a water-butt—suicide—had complained of giddiness and bad spirits for 5 weeks."

- (17)\* A woman about 20. "Drowning—had apparently been several days in the water—not known how she came there—body opened."

### HANGING and SUFFOCATION:—

- (18) A woman 61. "Suicide by hanging in temporary insanity."
- (19) A man 45, dealer in pigs. "Suicide by hanging himself with a cord, being of unsound mind—a drunkard."
- (20) A man 62. "Suicide by hanging—desponding in mind for 12 months respecting a chancery suit of twenty years' duration—insane."
- (21) A boy 3 months, son of a calenderer. "Accidental asphyxia by pressure against the mother's breast during sleep."

### BURNS and SCALDS:—

- (22) A woman 86. "Accidentally burnt to death by her clothes taking fire in her room."
- (23) A girl 2, daughter of an Officer of Excise. "Scalds from the falling of a saucepan of boiling water—5 weeks."
- (24) A boy 1, son of a tin-plate worker. "Scald of the chest 5 weeks previously, from his upsetting hot cocoa on it. Treated for the last 3 weeks with bread and milk poultices, and homœopathic medicines."

### POISON and OTHER HURTFUL SUBSTANCES:—

- (25) A man 19. "Suicide with essential oil of almonds in a gaol van going to prison for 14 days—lived 1½ hour—insane at the time."
- (26) A man 82. "Natural death, accelerated by an overdose of laudanum, administered as a sedative for cough, but not to destroy life—lived 3 days."
- (27) A woman 79. "Old age—coma produced by indigestible food—9 days."
- (28) A woman 25, single woman. "Inflammation of the stomach from taking penny royal and other herbs, which did procure abortion, but no evidence whether it was due to procure such abortion, or only menstruation."

A TABLE  
OF THE  
MORTALITY IN THE METROPOLIS,

SHEWING THE  
NUMBER OF DEATHS FROM ALL CAUSES,  
REGISTERED

*In the Week ending Saturday, December 27th.*

TO WHICH IS ADDED:

A RETURN OF BIRTHS REGISTERED IN THE METROPOLITAN DISTRICTS,  
DURING THE SAME PERIOD.

---

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

NOTES.

1.—Under the term METROPOLIS are comprised the 34 Districts above-mentioned, which include the City of London within and without the Walls, the City and Liberties of Westminster, the Out Parishes within the Bills of Mortality;—and the Parishes of St. Mary-le-bone; St. Pancras; Ken ingt n; Fulham; Hammer-mith; St Luke, Chelsea; Paddington; St Mary. Stoke Newington; St. Leonard, Bromley; St. Mary-le-how; Wandsworth; Clapham; Battersea (exclusive of Penge); Putney; Sreatham; Tooting Graveney; Camberwell; Greenwich; St. Nicholas and St. Paul, Deptford; and Woolwich. The population as enumerated in 1831, was 1,627,980; and in June 1841, 1,915,104.

2.—Under dropsy is included “dropsy—œdema glottidis,” a male aged 50 years. Under serofula, “rickets from birth,” a female 5 years. Under atrophy, “want of breastmilk,” a male 5 weeks. Under malformation, “deficient nourishment from cleft palate,” a female 2 months; “absence of the roof of the mouth—inanition from birth,” a female 5 days; and “congestion of lungs, caused by patulency of foramen ovale of heart—recovery for 14 days—death sudden—20 days,” a male 9 weeks. Under disease of the brain, “fits (11 days), spicula (f bone on the inner surface of the cranium,” post mort., a female 33 years. Under laryngitis, “laryngitis, with œdema glottidis (9 days),” a female 1 year. Under worms, “infantile remittent fever,” a female 2 years. Under ulceration of intestinal canal, &c., “extravasation of fecal matter into the peritoneum, through a rupture in the cœcum, close to the appendix, caused by two calculi, composed of phosphate of lime and fecal matter; ill 3 days therefrom—quite well previously (inquest),” a male 21 years. Under disease of the liver, “induration of liver (3 months), ague (2 months),” a female 40 years. Under disease of the kidneys, “albuminous urine and anasarca (4 months), ascites (1 month), granular degeneration of the kidneys,” a male 37 years; and “catarrhus vesicæ (4 years), bed sore (a few months),” a male 82 years. And under disease of the skin, “eczema (3 weeks), aphthæ (4 days),” a male 9 weeks.

3.—The following are the cases of death by violence which appear in the present table:—

- FRACTURES and CONTUSIONS:—

  - (1) A boy half an hour, son of a bricklayer's labourer. “Injury to the brain by an accidental fall upon the floor at the time of birth, and before assistance could be obtained.”
  - (2)\* A woman 73, gentlewoman. “Injury of the hip-joint by a fall.”
  - (3) A woman 59, spinster, gentlewoman. “Concussion of the brain from a fall down stairs accidentally—10 hours.”
  - (4) A man 27, carpenter. “A blow on the head from the accidental fall of a piece of wood 25 feet upon upon him—instan-taneous death.”
  - (5) A boy 3, son of a carpenter. “Accidental death from a stone garden-roller having fallen upon his body, when in an area—instantaneous death.”
  - (6) A man 65. “Extensive swelling of the salivary organs after the extraction of a tooth, terminating in gangrene.”

- WOUNDS:—

  - (7) A man 38, gentleman. “Wound in the throat with a razor, inflicted by himself, at the Burlington Hotel, while insane—lived a week.”
  - (8) A man 48, bricklayer. “Pistol-shot wound—wilfully mur-dered by Samuel Quennell—instanter”
  - (9)\* A man 35. “Cut finger (3 days)—tetanus (2 days.”

SUFFOCATION:—

  - (10) A man 65, pauper. “Suffocation from lodgment of a piece of meat in his throat at dinner, from swallowing voraciously—lived 20 minutes.”
  - (11) A man 23, lately employed by the Excise. “Suffocated by getting into the soil of a privy in Great Knight Rider-street—temporary insanity.”

BURNS:—

  - (12) A woman 19. “Burnt from her frock taking fire, from treading on a piece of lighted cotton (10 days).”

NOTE.—The death of a boy, aged 8 years, was registered in the week ending December 13th, as having been caused by “rupture of the stomach.” An inquest was subsequently held on this case, and the following verdict returned—“Rupture of the cardiac extremity of the stomach, from distension with air, caused by stoppage of the pyloric orifice with a piece of potato.”

\* Nos. 2 and 9 are imperfect returns. In the former the place where the accident occurred should have been stated: for example—in a dwelling-house—down stairs—on the street, &c. In the latter, the kind of weapon should have been mentioned, and the circumstances in which the wound was received.

In all deaths by violence, the number of days or hours which elapse between the injury and death should be stated, when the time can be ascertained.

THE REGISTRARS are requested, in returning the cases which form the weekly list of violence, to add to each the rank or profession of the deceased, or of the parents, if it be a child. When it cannot be ascertained, add “rank or profession unknown.”

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

*During the Week ending Saturday, December 27th, 1845.*

[illegible]

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy, by estimating the number of tenths of the visible sky which are covered by clouds. The observations are taken every two hours, day and night, with the exception of Sundays. The readings of the various registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every hour, at 10 A.M., and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

The average Temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "HIGHER," and — is read "LOWER," than the average.

# A TABLE OF Births and Deaths registered in the Metropolis During the Week ending Saturday, January 3rd, 1846.

ANNUAL SERIES VII.]

THE FOLLOWING ARE THE CASES OF DEATH BY VIOLENCE WHICH APPEAR IN THE PRESENT TABLE:—

FRACTURES AND CONTUSIONS:—

- (1) A man about 19, plasterer. "Fracture of the skull—contusion of the brain and broken neck—fell from a ladder when at work at a building—3 days. *post mort.*"
- (2) A boy 16, sea-apprentice. "Accidental, from fractured spine by a fall into a dry dock at Limehouse."
- (3) A man 31, slater. "Fracture of backbone—crushing spinal marrow, and laceration of right lung—fell from a housetop when at work—3 hours. *post mort.*"
- (4) A woman 21, servant. "Accidental, from a dislocated ankle-bone by a fall at Shadwell on 29th Sept. from a quay."
- (5) A man 52, brass-founder. "Pneumonia from fractured ribs, caused by his accidentally falling down stairs at a public house, while drunk, 6 weeks before—the pneumonia during a fortnight."
- (6) A man 42, carpenter. "Wound of the head caused by an accidental fall from a wall."
- (7) A man 57, labourer. "Accidental fall down a hole, causing fractured skull."
- (8) A boy 6. "Accidental death by a fall down stairs at his father's house—concussion of the brain—2 days."
- (9) A man 46, shipwright. "Injuries to the pelvis by an accidental fall from a scaffold 23 feet in height—lived 6 weeks."
- (10) A man 43. "Inflammation of the veins of the right arm from an injury by a fall from a pile of timber—lived 16 days."
- (11) A woman 84. "Mortal injuries caused by an accidental fall into a cellar."
- (12) A woman 42. "Injuries of the head producing apoplexy, caused by a fall while drunk in Berwick Street, Soho—lived 37 hours."
- (13) A boy 12, son of a shoemaker. "Fracture of the spine and congestion of the brain, caused by a door falling on him at Whitecross Street—lived 10 hours. *post mort.*"
- (14) A boy 9, son of a labourer. "Accidental, by a blow from a door on his head."
- (15) A man 59. "Mortification following compound fracture of the left leg, from being struck by a piece of timber launched on board a ship, the 'Java,' in the East India Dock, Blackwall—lived 31 days."
- (16) A man about 25. "Fracture of the pelvis and gangrene, caused by a stuck of iron plates accidentally falling on him."
- (17) A man 61. "Injuries from being crushed in the leg and body from a log of timber accidentally falling on him."
- (18) A man about 19. "Inflammation of the lungs from injuries to the left leg, accidentally received on board of a brig in the River Thames."
- (19) A woman 67. "Diseased heart—fractured thigh."
- (20) A woman 83. "Injury to the hip—old age."
- (21) A man 20, labourer. "Bodily injuries—run over by the forewheel of a waggon while at work on the Richmond Railroad—accidental—6 minutes."
- (22) A woman 61, charwoman. "Injuries to the head and neck from having been crushed by a cart-wheel."
- (23) A man 44, porter. "Delirium tremens, consequent on the kick of a horse on his thigh while cleaning the horse—lived 6 days."
- (24) A boy 8 years, son of a labourer. "Rupture of the duodenum by being accidentally run over by a cab in Regent Street 10 hours before."
- (25) A man 73, stonemason. "Communited fracture of the thigh, from being run over by a cart, while intoxicated, on Oct. 21st. Pneumonia supervened on Nov. 19th, and delirium tremens on Nov. 23rd."
- (26) A man 24, coachman. "Exhaustion after compound fracture of the skull from the kick of a timid horse which he was clipping on Nov. 4th."
- (27) A man 78. "Wound of the left leg, from being accidentally knocked down by an omnibus."
- (28) A man 57. "Injuries of the head, by being thrown from a cab by unknown means, which he was driving while drunk."
- (29) A man 62, seller of fruit in the street. "Fractured skull and rupture of the brain; run over by a coal waggon drawn by four horses."
- (30) A man 55, painter. "Rupture of an artery in the intestines, caused by an omnibus wheel forcing him along the ground in Cheapside, he having slipped down whilst crossing the street—lived 32 hours. *post mort.*"
- (31) A boy 5, son of a labourer. "Accidental from a fractured skull, caused by being run over by the wheel of a cart in Shadwell 3 weeks before."
- (32) A man 82, watchman. "Accidentally killed by a cab running over him on Nov. 1st in Shoreditch, causing fractured leg."
- (33) A man 32. "Accidentally run over by a waggon, causing fractured ribs."
- (34) A man 30. "Accidentally run over and killed by the cart he was driving."
- (35) A girl 9, daughter of a watch-pinuer. "Fractures of her pelvis by a cart wheel passing over her whilst at play in Great Sutton Street—lived nearly 4 weeks. *post mort.*"

WOUNDS:—

- (36) A man, 69, compositor. "General dropsy, after an attempt at self-destruction, by making a wound in his side with a razor."
- (37) A man 38, carman. "Cutting his throat in temporary insanity—died instantly."
- (38) A woman 67, widow. "Wound in her back by a stab from a knife—great hæmorrhage therefrom, and rupture of a blood-vessel in her brain—maul-slaughter against John Harrobin, her son—lived about an hour. *post mort.*"

DROWNING:—

- (39) A man about 19, unknown. "Found drowned in the River Thames, without marks of violence—no evidence to prove how."
- (40) A man 56. "Drowning—suicide—of unsound mind for 12 months—under medical treatment for disease in the head."
- (41) A man 34, compositor. "Drowned by the overturning of a wager-boat, in which he was practising on the Thames, off Somerset House—under water 13 days."
- (42) A man 17, carpenter. "Accidentally drowned in St. Katherine's Docks, by a fall from a boat."
- (43) A man 27. "Found dead—apparently drowned."
- (44) A man 58, captain of a sailing barge. "Drowned by falling off the side into the water, but how the fall was occasioned no sufficient evidence."
- (45) A man 40, mate of the 'Margaret' schooner. "Drowned by falling from a barge, whilst going on board the 'Margaret' schooner, at Mill Tice—under water 2 days."

- (46) A man 23, bargeman. "Drowned by falling out of a barge called the 'Albert,' in consequence of its running against another barge at Blackfriars' Bridge—under water 16 days."
- (47) A man 27, labourer. "Drowned by falling into the Surrey Canal Dock, from the brig 'Antony,' of Liverpool."
- (48) A man 17, apprentice seaman of the brig 'Argo,' of Sunderland. "Drowned by falling into the River Thames from a lighter."
- (49) A girl 12, daughter of an engineer. "Mental derangement—drowned herself."
- (50) A woman 25, spinster. "Drowning herself in the River Thames, in temporary insanity—under water 6 weeks."
- (51) A man 19. "Accidentally drowned in the River Thames."
- (52) A boy 15, son of a carpenter. "Drowned in the River Ravensbourne, by accidentally falling in, whilst dipping for a pail of water."
- (53) A boy 16, apprentice waterman. "Drowned in the River Thames, by what means no evidence—supposed to have fallen out of the E 'Citizen' steamboat."
- (54) A woman 19, spinster. "Suicide by drowning in the water of the Grand Surrey Canal in temporary insanity—under water 10 minutes."
- (55) A man 24. "Drowned in the waters of the River Thames."
- (56) A woman about 26. "Suffocation from drowning—marks of violence on the face."

HANGING AND SUFFOCATION:—

- (57) A man 52, hairdresser. "Hanging himself in temporary insanity."
- (58) A man 38, hairdresser. "Suicide—hanging himself in a fit of temporary insanity."
- (59) A woman 17, domestic servant. "Suicide by hanging—state of mind unknown."
- (60) A woman 38. "Suicide by hanging—of unsound mind—pains in the head for 4 months."
- (61) A girl under 1, daughter of a mattress-maker. "Accidentally suffocated at the breast of her mother, whilst carrying her."
- (62) A man 55. "Accidental death by suffocation, from the noxious vapour of a vat."
- (63) A man 31. "Accidental death by suffocation, from the noxious vapour of a vat."
- (64) A girl 3 months, daughter of a blacksmith. "Accidentally suffocated in bed."

BURNS AND SCALDS:—

- (65) A girl 13, daughter of a labourer. "Accidental from burns from the clothes taking fire, at Plaistow, Essex."
- (66) A boy 2, labourer's son. "Accidental from clothes taking fire at Poplar."
- (67) A boy 7 months, son of a turner. "Accidental by burns from clothes taking fire."
- (68) A boy 4, son of a labourer. "Burns of the chest and belly—hedgown took fire from a candle held in his hand—about 14 hours."
- (69) A man 80. "Accidentally burnt to death by his clothes taking fire."
- (70) A boy 5, son of a coal-porter. "Burns of face, chest, abdomen, and legs—clothes took fire when playing with lighted paper."
- (71) A boy 2, son of a coachsmith. "Burns of the whole body—clothes took fire when playing with Christmas candles in a room—half an hour."
- (72) A boy 14, son of a shoemaker. "Locked jaw, caused by burns from the explosion of fireworks in his pockets, at Ropenaker Street—lived 10 days—locked jaw 2 days."
- (73) A boy 5, son of a carver. "Burnt by his nightgown taking fire, by putting some shavings on the fire at Turnmill Street—lived 15 hours."
- (74) A girl 5, daughter of a bricklayer. "Burnt by her pinafore taking fire, whilst at play in her father's apartment in Benjamin Street, Clerkenwell—lived 3 hours."
- (75) A woman 77, widow of a tailor. "Burns from her clothes taking fire as she sat at a grate—lived 26 days."
- (76) A woman 80. "Accidentally burnt to death from her clothes taking fire."
- (77) A woman 38, wife of a carver and gilder. "Inflammation of the lungs, following burns of the head, neck, chest, and shoulders—cap and clothes took fire from the fire in the grate, when cleaning the fender." *post mort.*
- (78) A woman 45, wife of a navigator. "Burns of the face, trunk, and extremities—no evidence how caused." *post mort.*
- (79) A woman 76, widow of a brushmaker. "Burns of arms, face, chest, and back—clothes took fire from a fire in the grate, deceased being in a helpless and infirm state."
- (80) A girl 9, daughter of a dyer. "Accidental from burns from the clothes taking fire."
- (81) A girl 9, daughter of a labourer. "Accidental from burns from the clothes taking fire."
- (82) A woman 21, servant. "Accidental from burns from the clothes taking fire in Shoreditch."
- (83) A girl 11, daughter of a weaver. "Accidental from scalds in the legs, by the fall of a saucepan of boiling water, in Ramsey Street, Bethnal Green."
- (84) A woman 29, wife of a copperplate printer. "Chronic inflammation of the brain, and acute inflammation, brought on by a scald from falling against a kettle of boiling water, whilst in a fit, at Clerkenwell."
- (85) A boy 2, son of a carpenter. "Scald by accident, 10 days—convulsions."
- (86) A boy under 1, son of a travelling comedian. "Scalded with hot tea, by accidentally upsetting a teapot—11 days."
- (87) A boy 1. "Accidental death from scalds, from the upsetting of a kettle of water."
- (88) A boy 3 months, lighterman's son. "Accidental by scalds from a saucepan of boiling water."
- (89) A boy 1, son of a tailor. "Accidentally scalded by a pot of coffee falling on him at Cobb's Yard, Petticoat Lane."

POISON:—

- (90) A man 26, blacksmith. "Mortal effects of oxalic acid—suicide."
- (91) A man 55, vendor of combs. "Poisoned himself with laudanum, in a temporary state of insanity."
- (92) A woman 19, daughter of a stationer. "Arsenic, producing inflammation of the mucous surface of the stomach and bowels—death at the end of 6 days—suicide." *post mort.*

# EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PRECEDING WEEK.

## CAUSES OF DEATHS, AS RETURNED BY THE MEDICAL OFFICERS OF EIGHT METROPOLITAN HOSPITALS.

<b>ST. GEORGE'S:—</b>			<b>LONDON:—</b>		
A man 63 years	Disease of the stomach†	duration not stated.	A man 19 years	Consumption†	not stated.
A woman 33 years, <i>post mort.</i>	{ Fits Spicula of bone on the inner surface of the cranium. .... }	11 days. not stated.	A girl 4 years	Bronchitis†	not stated.
<b>WESTMINSTER:—</b>			<b>ST. THOMAS':—</b>		
A man 29 years, <i>post mort.</i>	{ Pleuro-pneumonia† Pericarditis	not stated. 18 days.	A man 48 years	{ Bronchitis—Morbus cordis— Anasarca	not stated.
<b>CHARING CROSS:—</b>			A man 29 years	{ Haemoptysis—Chronic Bron- chitis—Hepatitis†	illness 2 years.
A man 59 years, <i>post mort.</i>	{ Disease of aortic valves—Hy- drothorax—Anasarca	not stated.	<b>DREADNOUGHT:—</b>		
<b>KING'S COLLEGE:—</b>			A man 26 years, <i>post mort.</i>	{ Stricture of the small intestine, from an adhesion of the appen- dix vermiformis—constipation	duration 3 days.
A boy 4 years, <i>post mort.</i>	{ Scarlatina Dropsy, caused by congestion of kidneys	1 month. not stated.	A man 19 years, <i>post mort.</i>	{ Anasarca Ascites	7 weeks. 1 weeks.
<b>ST. BARTHOLOMEW'S:—</b>			A man 37 years, <i>post mort.</i>	{ Contraction of the mitral valve Albuminous urine and anasarca	not stated. 4 months.
A man 20 years	Bronchitis†	not stated.	A man 37 years, <i>post mort.</i>	{ Ascites Granular degeneration of the kidneys	1 month. not stated.
A man 31 years	{ Ulceration of the bowels and peritonitis†	not stated.	A man 30 years, <i>post mort.</i>	{ Haemoptysis, cough, &c. Miliary tubercle (both lungs)— consolidation of right lung from recent inflammation†	3 weeks. not stated.
A man 26 years	{ Pleurisy, effusion on the left side, with perforation†	not stated.	A man 41 years, <i>post mort.</i>	{ Pain at stomach—vomiting— inability to take food— Aneurism of the arch of aorta, pressing on the gullet, and opening into the right pleura†	16 days. not stated.
A man 49 years	Pneumonia†	not stated.			
A girl 15 years	{ Rheumatic endocarditis, with dropsy	not stated.			
A woman 35 years	Erysipelas†	not stated.			
A woman 41 years	Emphysema and Pleurisy†	not stated.			

## CAUSES OF DEATHS, AS RETURNED BY PRIVATE PRACTITIONERS IN MEDICINE AND SURGERY.

NOTE.—The following list exhibits *in extenso*, all the instances, as they are registered, of the various forms of disease contained in it, with the exception of such as are included under the head "Miscellaneous," and of such as are marked thus (†) in the above List of Hospital Returns.

A woman 23 years	Small pox (natural)	duration 9 days.	A man 31 years	{ Emphysema of the lungs, pro- duced by a disease of the heart	many years.
A girl 11 weeks	{ Small pox (not stated whether vaccinated)	not stated.	A man 58 years	Hypertrophy of the heart	1 year.
A girl 3 years	Small pox (never vaccinated)	not stated.	A man 25 years	{ Dilatation of the heart. Consequent anasarca	from childhood. duration 1 month.
A girl 15 years	{ Confluent small pox (vaccinated at the age of 1 year).	not stated.	A woman 66 years	{ Chronic hypercardia—hydro- thorax.	not stated.
A girl 5 months	Varicella (vaccination not stated).	1 month.	A girl 2 years	Infantile remittent fever	not stated.
A girl 2 years	Pneumonia	not stated.	A man 56 years	Cirrhotis	1 year.
A girl 4 years	Small pox (not vaccinated).	not stated.	A man 24 years	Enlarged spleen and dropsy	13 weeks.
A girl 4 years	{ Intussusception of the bowels. Varicella (not stated whether vac- cinated)	6 days. 1 day.	A man 41 years	Diabetes.	3 years.
A woman 25 years	{ Small pox (without previous vac- cination)	14 days.	A woman 22 years	{ Calculus in the right kidney Ascites and anasarca	15 or 16 yrs not stated.
A boy 5 weeks	Want of breastmilk	length of privation not stated.	A man 46 years, <i>post mort.</i>	{ Disease of the kidneys. Gout in the extremities	2 years. years.
A boy 9 weeks	{ Congestion of lungs, caused by patency of the foramen ovale of the heart—recovery for 14 days—death sudden	duration 20 days.	A man 74 years	{ Disease of the kidneys and liver. Natural enlargement of the thymus gland, and granular degeneration of the kidneys, found after death. No other change to account for the death. Some of Dalby's Car- minative given 7 hours before death—no narcotic effects found (inquest).	months.
A girl 2 months	Deficient nourishment, from having a cleft palate.		A man 53 years	Disease of the liver and kidneys.	4 years.
A girl 5 days	Absence of the roof of the mouth — inanition from birth		A man 23 years	Morbus renis.	2 months.
A man 74 years	Cerebral softening	6 years.	A man 82 years	{ Catarrhus vesicæ Bed-sore	4 years. a few months.
A man 54 years	{ Paralysis Disease of the brain, probably softening, ending in apoplexy	2 months. not stated.	A man 37 years	{ Disease of the kidneys and ul- ceration of the bladder.	not stated.
A man 50 years	Softening of the brain	not stated.	A man 75 years	{ Disease of the prostate gland, succeeded by disease of the bladder	2 years.
A woman 36 years	{ Disease of the heart—hypertro- phy with dilatation	not stated.	A man 69 years	Disease of the kidneys.	of long standing.
A man 26 years	Diseased heart	16 months.	A man 69 years	{ Urinary abscesses Enlarged prostate gland	duration not stated. not stated.
A man 46 years	Bronchitis and morbus cordis.	4 months.	A man 74 years	{ Spasmodic stricture Cystitis	7 days.
A man 46 years, <i>post mort.</i>	Enlarged heart	not stated.	A woman 57 years	{ Menorrhagia Chronic inflammation of the bladder	6 months. not stated.
A woman 68 years	{ Continued fever Hypertrophica cordis—Anasarca	4 weeks. not stated.	A woman 26 years	Puerperal peritonitis	7 days.
A man 53 years	{ Chronic bronchitis and diseased heart	many years.	A woman 40 years	Puerperal fever.	not stated.
A man 81 years	Disease of the heart	4 months.	A woman 38 years, <i>post mort.</i>	Puerperal peritonitis	not stated.
A man 57 years, <i>post mort.</i>	{ Dilated hypertrophy of the heart. Edema of lungs—Pulmonary apoplexy—Anasarca.	3 years. 2 years.	A woman 24 years	{ Child-bed—malformation of the pelvis	after delivery 5 hrs.
A woman 36 years	{ Hydrothorax Diseased heart and lungs	not stated.	A woman 31 years	{ Childbirth Scarlet fever	after delivery 5 days. duration 3 days.
A man 65 years	Organic disease of the heart	not stated.	A woman 43 years	{ Disease of the heart. Syncope	some years. after delivery 3 hrs.
A man 55 years	Disease of the heart	not stated.	A woman 33 years	Puerperal fever	duration not stated.
A woman 59 years	{ Disease of the heart and dropsy. Hydropericardium, dependent on ossification of the valves of the heart	not stated.	A woman 21 years	{ Puerperal convulsions Disease of ankle-joints	8 hours. not stated.
A woman 65 years	{ Rheumatism Adherent pericardium, diseased tricuspid valves, hypertrophy, pulmonary engorgement	10 years. not stated.	A boy 13 years	Psoas abscess.	18 months.
A man 60 years, <i>post mort.</i>	{ Palpitation of the heart Dropsy	5 years. 2 months.	A man 18 years	Diseased hip	3 years.
A woman 19 years	Diseased heart	not stated.	A girl 9 weeks	{ Eczema Aphthæ	3 weeks. 4 days.
A woman 69 years	{ Dropsy Brouchitis	14 days.			
A man 62 years	{ Morbus cordis	not stated.			

## MISCELLANEOUS RETURNS.

A man 28 years	Pulmonary consumption	declining 8 years, laid up 10 months.	A girl 5 years	{ Typhus Cancerum oris.	37 days. 11 days.
A girl 1 year	Laryngitis, with oedema glottidis.	duration not stated.	A woman 37 years, <i>post mort.</i>	{ Ulceration of the stomach Vomiting of blood.	uncertain. before death 2 days.
A man 50 years	Dropsy—oedema glottidis	not stated.	A woman 64 years	{ Stricture of the rectum Stricture of the colon and ulcer- ation	duration 2 years. 6 weeks.
A man 59 years	{ Pleurisy Pneumonia	3 weeks. 8 days.	A man 62 years, <i>post mort.</i>	{ Struma—epilepsy	at least 10 yrs, probably from birth.
A woman 48 years	{ Abscess Low fever	9 weeks. 6 weeks.	A boy 15 years	Scarlatina	duration 10 days.
A woman 65 years	{ Phthisis Erysipelas	4 weeks. 5 weeks.	A boy 3 years	Hydropericardium	4 days.
A woman 65 years	{ Hemiplegia Erysipelas of the leg	3 weeks. 7 weeks.	A woman 57 years	Dropsy	not stated.
A woman 65 years	{ Gangrene Dentition	5 days. 4 weeks.	A woman 47 years	{ Schirrus of the pancreas Sarcomatous tumor in the abdo- men—organised band in the abdomen, which caused death	3 years. not stated.
A girl 9 months	Spasmodic affection of the glottis.	not stated.			

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, January 3rd, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			WIND							Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning		
			Dry		Dew Point		In the sun, as shown by a self-register- ing Thermometer	In the shade, as shown by a self-register- ing Thermometer	In the Water of the Thames, at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Difference between the mean temperature of the day, and the mean temperature of the year on an average of 25 years			General Direction		Pressure in lbs. on the square foot			Amount of Horizontal Movement of Air in each day

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and moderately active at 11h. 20m. a.m.	} Rain falling.	Overcast throughout the day. Rain was falling frequently in the morning, accompanied with strong gusts of wind.
MON.	Positive and at times active from 1h. 20m. a.m. till after 1h. 20m. p.m.; nothing shown during the remainder of the day.	} Principally cloudless.	Cloudless until after 7h. 20m. a.m.; at 9h. 20m. a.m. the clouds collected, and before 1h. 20m. p.m. it was overcast, and remained so during the remainder of the day.
TUES.	Positive and weak from midnight until 7h. 20m. a.m. Positive and very weak from 5h. 20m. p.m. to 7h. 20m. p.m.	} Overcast } Nearly cloudless.	Overcast until after noon; from that time until 5h. 20m. p.m. the sky was about half covered with cumuli, light clouds, and sand. Before 7h. 20m. p.m. it was cloudless, and remained so until midnight.
WED.	Positive and active from 3h. 20m. a.m., to 7h. 20m. a.m. At times positive and weak, and at other times negative and active during the evening.	} Cloudless. } Overcast. Rain falling.	Cloudless until after 3h. 20m. a.m.; clouds began to collect at 7h. a.m. and for the remainder of the morning cumuli, sand, and cirrostrati prevailed. At 7h. 20m. p.m. the sky was overcast, and remained so until midnight. Rain was falling with little intermission from 3h. 20m. p.m. until midnight. The wind was blowing in strong gusts during the evening.
THURS.	Positive and weak from 9h. 20m. p.m. to 11h. 20m. p.m.	} Cloudless.	The greater part of the sky was covered with cirrostratus until after 1h. 20m. p.m.; from 3h. 20m. p.m. until after 5h. 20m. p.m. only a small quantity of cloud prevailed. After that time the sky was cloudless. The wind was blowing in strong gusts in the early part of the evening.
FRI.	Positive and at times active throughout the day.	} Generally cloudless.	With the exception of a few cirrostrati about noon, the sky remained cloudless until after 7h. 20m. p.m. Before 9h. 20m. p.m. the sky became overcast, and remained so.
SAT.	Positive and generally active throughout the day.	} With the exception of a short time in the morning, the sky was overcast.	The sky remained overcast until 3h. 20m. a.m.; for the remainder of the morning only a small amount of cloud was scattered over the sky. In the afternoon and evening the sky, with little exception, was overcast.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been under repair during the week.  
The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.  
The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 38.0; and the mean reading at 7h. 30m. P.M., was 42.9; the mean readings at the Royal Observatory for the same times were 37.3 and 41.8 respectively.

+ The mean direction of the wind for the week is S.W. During the whole of the week Osler's self-registering anemometer has been out of action while undergoing alterations, and in consequence some of the maxima pressures of the wind may not have been exhibited. It is now (Monday January 5) in action again.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, January 10th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

# EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 1. (ending Saturday, Jan. 3rd.)

## CAUSES OF DEATHS, AS RETURNED BY THE MEDICAL OFFICERS OF THIRTEEN HOSPITALS.

<b>St. George's H.:</b>		<b>Bartholomew's H.:</b>	
A male .. 50 years .....	Delirium tremens..... duration not stated.	A male .. 28 years .....	Phthisis..... duration not stated.
A female 62 years, post mort. ....	Apoplexy—effusion of blood in the skull (inquest)..... duration not stated.	— .. 63 years .....	Fever..... duration not stated.
— .. 30 years .....	Pulmonary consumption..... duration not stated.	— .. 74 years .....	Bronchitis..... duration not stated.
A male .. 48 years .....	Dropsy—disease of the heart and liver..... duration not stated.	— .. 3 years .....	Measles..... duration 5 weeks.
— .. 36 years, post mort. ....	Pleurisy, and inflammation of the lungs..... duration not stated.	A female 49 years .....	Phthisis..... duration not stated.
— .. 51 years .....	Dropsy and pulmonary consumption..... duration not stated.	See Nos. 13, 30, 35, 72, 73, 74, and 84, in the deaths by violence annexed to the table of former week.	
— .. 25 years, post mort. ....	Rheumatic disease of the heart..... duration not stated.	London H.:—See Nos. 2, 4, 7, 14, 31, 32, 65, 66, 67, 80, 81, 82, 83, 88, and 89, in the same list.	
— .. 30 years, post mort. ....	Pulmonary consumption..... duration not stated.	<b>Guy's H.:</b>	
— .. 22 years, post mort. ....	Fever and ulceration of the bowels..... duration not stated.	A male .. 56 years .....	Ascites..... duration not stated.
— .. 46 years, post mort. ....	Asthma and emphysema of the lungs..... duration not stated.	A female 29 years .....	Bronchitis..... duration not stated.
— .. 19 years .....	Chronic abscesses over the pæctella and body generally..... duration not stated.	A male .. 30 years .....	Inflammation of womb..... duration not stated.
See the list of deaths by violence annexed to the table of former week Nos. 1, 3, 77, and 78.		A male .. 48 years .....	Stricture..... duration not stated.
<b>Westminster H.:</b>		— .. 26 years .....	Paralysis..... duration not stated.
A male .. 24 years .....	Delirium tremens..... duration 5 days.	— .. 26 years .....	Phthisis..... duration not stated.
See the list of deaths by violence annexed to the table of former week, Entry No. 79.		— .. 45 years .....	Pneumonia..... duration not stated.
<b>Charing Cross H.:</b> —See the same list, No. 70.		A female 12 years .....	Pneumonia..... duration not stated.
<b>Middlesex H.:</b> —See the same list Nos. 5, 6, 12, 23, 24, 25, 26, 27, 75.		— .. 12 years .....	Fever..... duration not stated.
<b>University College H.:</b>		— .. 12 years .....	Peritonitis..... duration not stated.
A male .. 74 years .....	Tubercles..... duration indefinite.	<b>St. Thomas' H.:</b>	
— .. 17 years .....	Bright's disease..... duration not stated.	A female 50 years .....	Diseased heart..... duration not stated.
— .. 34 years .....	Pus in the veins..... duration 12 days.	— .. 8 years .....	Hydrops..... duration not stated.
— .. 27 years .....	Pneumonia..... duration 8 hours.	A male .. 27 years .....	Morbus cerebri..... duration not stated.
— .. 12 years .....	Morbus cordis..... duration 3 years.	— .. 28 years .....	Paraplegia..... duration not stated.
A female 12 years .....	Albuminuria..... duration 25 days.	— .. 38 years .....	Diseased kidneys..... duration not stated.
— .. 65 years .....	Bronchitis..... duration not stated.	— .. 11 years .....	Diseased heart..... duration not stated.
<b>Fever H.:</b>		<b>Dreadnought H.:</b>	
A male .. 9 years .....	Fever—from St. Martin-in-the-Fields..... In hospital 18 days.	A male .. 29 years, post mort. ....	Popliteal aneurism..... duration 26 days.
— .. 20 years .....	Fever—from Spitalfields..... In hospital 16 days.	Treated by pressure..... during 13 days.	
A female 12 years .....	Fever—from Camberwell..... In hospital 35 days.	Obliteration of aneurism, gangrene of leg, amputation of thigh..... before death 35 hours.	
<b>King's College H.:</b>		Incipient gangrene of left lung and heart.....	
A male 45 years .....	Morbus cordis..... duration 15 years.	Endocarditis..... duration 10 weeks.	
— .. 54 years .....	Bronchitis..... duration 3 weeks.	Anasarca, ascites, &c..... duration 6 weeks.	
See Nos. 29 and 71 in the deaths by violence annexed to the Table of former week.		Hypertrophy and dilatation of the heart.....	
		See list of deaths by violence of former week, Nos. 10, 15, and 18.	
		<b>Small Pox H.:</b> —No Returns.	

CORONERS' RETURNS OF DEATH BY DISEASE IN WHICH THE CAUSE OF DEATH IS ASSIGNED.			
A female 29 years .....	Spasms of the chest with vomiting..... duration 3 hours.	A female 84 years .....	Natural..... no previous illness.
— .. 39 years .....	Hæmorrhage, from the bursting of an enlarged vein of the right leg..... duration not stated.	— .. 55 years .....	Rupture of the left auricle of the heart, produced by natural causes..... not stated.
A male .. 3 weeks.....	Natural—congestion of the lungs—frequently had convulsions..... duration not stated.	A male .. 55 years .....	Sudden rupture of a blood vessel in the lungs..... death in 1 minute.
Two males 17 and 12 years, post mort. ....		A female 40 years .....	Exhaustion, caused by loss of blood from her womb, while in a state of pregnancy..... how long before death not stated.
Specific malignant highly contagious disease, of a kind hitherto undescribed, produced by a specific poisonous effluvia, or malaria, not describable, first developing its influence in Whetstone Park, Lincoln's Inn Fields, and thence brought by a patient to Cumberland Market, whence diseased was brought to the Hospital ..		— .. 23 years, post mort. ....	Hydrophobia..... duration 2 days.
A male .. 73 years, post mort. ....	Sanguineous apoplexy..... duration 18 hours.	A male .. 9 weeks.....	Had been bitten in the wrist by a dog..... 7 weeks previously.
— .. 6 days .....	Natural—convulsions..... a few hours.	A female 4 years .....	Natural—convulsions..... duration not stated.
A female 18 years .....	Natural—had left a hospital a few hours previously, in the last stage of consumption ..	A male .. 1 year .....	Effusion of water on the brain—cause unknown..... duration not stated.
A male .. 39 years .....	Breaking a blood vessel..... how long before death not stated.	A female 3 months .....	Natural death—water on the brain—Found dead, without marks of violence—apparently from convulsions..... duration not stated.
A male .. 45 years .....	Bursting of a blood vessel, supposed in the stomach..... how long before death not stated.	A male .. 50 years (about) ..	Natural—extreme destitution..... duration not stated.
— .. 7 weeks.....	Atrophy—the mother being in want of common necessaries.....	A male .. Newly born ....	Hæmorrhage from the navel—string not being tied—but no evidence whether by accident or design..... found within 24 hours after birth.
— .. 47 years .....	Sanguineous apoplexy..... how long before death not stated.	— .. 35 years (about) ..	Disease of the heart..... duration not stated.
— .. 3 years .....	Extravasation of blood on the brain, produced by natural causes..... how long before death not stated.	A female 32 years, post mort. ....	Ulceration of the stomach—natural..... duration not stated.
		A male .. 71 years .....	Natural death—most probably disease of the heart..... duration not stated.
		— .. 48 years .....	Found dead—apparently from a fit.....
		A female 5 months .....	Found dead in bed—supposed by a fit in teething..... sudden.
		— .. 52 years .....	Natural death, from apoplexy..... duration not stated.

## CORONERS' RETURNS, (continued.)

A female 13 weeks.....	Natural death, from convulsions..	duration not stated.	A female 40 years (about)..	Natural death—relaxed bowels and spasms—most probably brought on by exposure to wet and cold.....	duration not stated.
A male .. 60 years .....	Natural death—apoplexy .....	duration not stated.	A male .. 6 months .....	Natural death, convulsions from teething.....	duration not stated.
A female 39 years .....	Natural death—rupture of abscess in the lungs.....	duration not stated.	— .. 1 year (under) ..	Natural death from a fit .....	duration not stated.
A male .. 16 weeks.....	Natural death, from the effects of syphilis .....	from birth.	— .. 7 weeks post mort.	Natural death—congestion of the lungs .....	duration not stated.
— .. 54 years .....	Natural death, from effusion, producing epilepsy .....	duration not stated.	— .. 70 years (about)..	Bursting of a blood vessel .....	sudden.
A female 63 years .....	Natural death, from chronic disease of the brain .....	duration not stated.	— .. 60 years (about)..	Bursting of a blood vessel .....	sudden.
— .. 52 years .....	Natural death, from hemorrhage, from rupture of a blood vessel .....	duration not stated.	A female 54 years .....	Rupture of the heart from disease .....	sudden.
— .. 2 years .....	Natural death—hooping cough .....	duration 3 weeks.	A male .. 5 months .....	Convulsions .....	duration not stated.
A male .. 35 years .....	Natural death, from diseased heart .....	instantaneous.	A female 37 years, post mort.	Effusion into the cavity of the abdomen from rupture of one of the uterine vessels .....	duration not stated.
— .. 41 years .....	Natural death—diseased heart .....	duration not stated.	— .. 53 years .....	Chronic asthma .....	duration not stated.
— .. 70 years .....	Found dead, from diseased heart .....	duration not stated.			
A female 4 months .....	Natural death—convulsions .....	duration not stated.			

## CORONERS RETURNS IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED OF WHAT DISEASES OR CAUSES THE PERSONS DIED.

A male .. 77 years .....	Natural causes .....	sudden	A male .. newly born	Unknown—too much decomposed for internal examination—apparently born without medical aid, and exposed.....	no previous illness.
A female 77 years .....	Natural causes .....	sudden	— .. 44 years .....	Dropped down and died instantly .....	no previous illness.
A male .. 70 years .....	Visitation of God .....		A female 2 months .....	Found dead in bed, without marks of violence .....	duration not stated.
A female 61 years .....	Natural causes .....		— .. 57 years .....	Natural death—precise cause not ascertained.....	duration not stated.
A male .. 42 years .....	Natural .....	no previous illness	— .. 1 month .....	Found dead in her mother's arms .....	duration not stated.
— .. 56 years .....	Natural .....	no previous confinement	— .. 3 months .....	Found dead in bed, without marks of violence .....	duration not stated.
A female 41 years .....	Natural .....	no previous illness requiring confinement	— .. newly born .....	Found dead in a privy.....	duration not stated.
A male .. 1 year .....	Natural .....	sudden—no previous illness	— .. 77 years .....	Found dead without marks—apparently from exhaustion.....	duration not stated.
— .. 55 years .....	Natural .....	no previous illness	A male .. 37 years .....	Natural causes .....	sudden
A female 55 years .....	Natural .....	no confinement from previous illness	— .. 6 weeks .....	Natural causes .....	sudden
— .. 48 years .....	Natural .....	no previous illness	A female 50 years .....	Found dead in her bed—natural causes .....	sudden
— .. 72 years .....	Natural .....	no dangerous previous illness	— .. 64 years .....	Natural causes .....	sudden
— .. 69 years .....	Natural .....	no serious previous illness	— .. 34 years .....	Natural causes .....	sudden

## MISCELLANEOUS RETURNS.

## Small pox:—

A male .. 1 year .....	Small pox, natural—petechial—without previous vaccination .....	duration 12 days.	Grief:—	64 years .....	Agitation, caused by the death of her daughter .....	duration not stated.
— .. 1 year .....	Small pox .....	duration 26 days.	Hernia:—	80 years .....	Hernia .....	duration not stated.
— .. 1 year .....	Laryngitis .....	duration not stated.	A female 32 years .....	Strangulated hernia .....	duration not stated.	
A female 7 months.....	Vaccinated when 3 months old .....	duration 11 days.	A male .. 4 months .....	Rupture and general debility .....	from birth	
A male .. 5 months.....	Small pox—first attack—never vaccinated .....	duration 9 days.	A female 32 years, post mort.	Strangulated ileum, by mesentery .....	duration 3 days	
— .. 4 years.....	Small pox—not vaccinated—a fit immediately after getting some beer .....	duration 27 days.	Peritonitis .....	duration 2 days		
A female 1 year .....	Chicken pox .....	duration not stated.	Stone:—	73 years .....	Stone in the bladder .....	duration not stated.
— .. 1 year .....	Varicella—vaccinated at the age of 3 months, supposed to be with effect .....	duration 3 weeks.	Childbirth:—			
Syphilis:—			NOTE.—The time clapsing from the commencement of labour to the death should be invariably returned.			
A male .. 31 years .....	Syphilis .....	duration 7 years.	A female 37 years .....	Childbirth—adherent placenta .....	how long before death not stated.	
	Paralysis .....	duration 1 year.	— .. 33 years .....	Hæmorrhage .....	duration 3 weeks	
	Convulsions .....	duration 2 months.	— .. 39 years .....	Flooding in labour .....	times from commencement of labor and flooding not stated.	

## Cancer:—

A female 48 years .....	Carcinoma .....	duration 3 years.	— .. 35 years, post mort.	Exhaustion .....	41 hrs. after delivery	
— .. 48 years .....	Cancer of the womb .....	duration not stated.	— .. 21 years .....	Pregnancy .....	duration 7 months	
— .. 78 years .....	Cancer .....	duration 2 years.	— .. 31 years .....	Chronic disease of the liver .....	duration not stated.	
— .. 57 years .....	Scirrhus of stomach .....	duration not stated.	— .. 42 years .....	Disease of the heart—aneurism .....	duration not stated.	
— .. 49 years .....	Cancer of the womb .....	duration not stated.	— .. 26 years .....	Pregnancy .....	duration 8 months	
A male .. 69 years .....	Cancer of the stomach .....	duration not stated.	— .. 20 years .....	Peritonitis .....	14 days after delivery	
A female 75 years .....	Scirrhus uteri .....	duration 5 months.	— .. 31 years .....	Childbirth .....	how long before death not stated.	
— .. 61 years .....	Hard tumour of the anterior part of the neck of the uterus .....	duration 2 years.	— .. 42 years .....	Flooding .....	duration 3 hours	
— .. 71 years .....	Ulceration of the cervix uteri .....	duration unknown.	— .. 26 years .....	Peritonitis .....	duration 7 hours	
A female 58 years .....	Cancer of the womb .....	duration not stated.	— .. 20 years .....	After delivery of a still-born child .....	how long not stated.	
— .. 52 years .....	Tumour of the womb .....	duration 2 years.	— .. 20 years .....	Childbirth .....	death 24 hours after.	
— .. 63 years .....	Cancer of the breast .....	duration 9 years.	— .. 20 years .....	Collapse .....	duration 5 hours	
— .. 57 years .....	Hæmorrhage .....	duration not stated.	— .. 20 years .....	Childbirth .....	before death 45 hours	
— .. 41 years .....	Scirrhus uteri .....	duration 6 months.	— .. 20 years .....	Puerperal convulsions .....	8 hours	
— .. 51 years .....	Cancer of mamma .....	duration 1 year.	Disease of Skin:—			
A male .. 56 years post mort.	Carcinoma of the labia pudenda .....	duration 1 year.	A male .. 1 year .....	Eczema .....	duration not stated.	
— .. 61 years .....	Cancer of the liver, stomach, and pancreas .....	duration 2 years.	— .. 55 years .....	Tabes mesenterica .....	duration 1 year	
A female 50 years .....	Cancer .....	duration not stated.	— .. 5 months .....	Sibbens—asthenia, from the extensive ulceration accompanying this rare disease .....	duration 2 years	
— .. 45 years .....	Cancer of the womb .....	duration 1 year.	Intemperance:—	Atraphy .....	duration 5 days	
	Cancer in utero .....	duration about 1 year	A male .. 55 years .....	Eczema .....	duration 4 days	

## Malformation:—

A female 24 hours .....	Imperfectly developed .....		A male .. 55 years .....	Intemperance .....	duration not stated.	
— .. 2 years, post mort.	Malformation of heart .....		— .. 5 months .....	Delirium tremens .....	duration some years	
— .. 8 months .....	Pertussis .....	duration not stated.	A female 69 years .....	Dementia .....	duration 12 days	
A male .. 3 months .....	Pulmonary congestion .....	from birth	— .. 78 years .....	Ulcerated leg .....	duration many years	
— .. 3 months .....	Atrophy, from deficiency of palate, &c. .....	from birth	— .. 3 weeks .....	Gastric fever, caused by imprudence in diet .....	duration 5 days	
A female 2 years post mort.	Hypertrophy of the right ventricle .....		— .. 34 years .....	Gastric irritation .....	duration 2 months	
— .. 5 months .....	Foramen ovale open .....		— .. 3 weeks .....	Prostatic affection .....	duration 7 years	
	Tabes mesenterica .....		— .. 34 years .....	Ulceration of the larynx .....	duration not stated.	
	Pneumonia .....	duration not stated.		Abscess of posterior nares .....	duration not stated.	
	Fissure of the palate .....			Epilepsia .....	duration 3½ years.	
	Marasmus .....	soon after birth		Mania a potu .....	duration 5 or 6 weeks	

## RETURNS AFTER POST MORTEM EXAMINATION, ADDITIONAL TO THOSE WHICH APPEAR ABOVE.

A male .. 60 years .....	Apoplexy—paralysis .....	duration 5 years.	— .. 46 years .....	Pleuritis .....	duration not stated.	
— .. 50 years .....	Thickened state of dura mater—opacity of pia mater—effusion within the ventricles—effusion of blood between the dura mater and tunica arachnoides .....		A female 24 years .....	Typhus .....	duration not stated.	
— .. 50 years .....	Chronic inflammation and thickening of the membranes of the brain on the left side, and at the posterior part, containing numerous semicartilaginous tumours from the size of a pea to a small bean, the brain at this part softened—8 ozs. of fluid in the ventricles .....		A male .. 53 years .....	Apoplexy from a rupture of a vessel in the brain .....	duration 3 hours.	
— .. 43 years .....	Fits .....	duration 4 years.	A female 21 years .....	Ulceration of the stomach, and consequent escape of its contents into the abdomen .....	duration 15 hours.	
— .. 77 years .....	Loss of use of right side .....	duration 6 months.	— .. 7 months .....	Peritonitis .....	sudden.	
— .. 83 years .....	Hypertrophy of heart with dilatation .....	duration 10 months.	— .. 11 years .....	Peritonitis .....	duration 20 days.	
A female 26 years .....	Hydrops pericardii .....	duration not stated.	— .. 3 years .....	Phrenitis .....	duration 5 days.	
A male .. 24 years .....	Meningeal apoplexy—paralysis .....	duration not stated.	— .. 3 years .....	Effusion in the ventricles, deposit over the base of the brain .....		
	Ulceration of bladder .....	duration not stated.	— .. 34 years .....	Acute hydrocephalus .....	duration 10 days.	
	Inflammation of bowels .....	duration 8 or 10 days.	A male .. 64 years .....	Fever .....	duration 12 days.	
	Phthisis .....	duration not stated.	— .. 44 years .....	Affection of the brain .....	duration not stated.	
	Tubercle and inflammation of the brain .....	duration 3 weeks.	— .. 37 years .....	Obstipation et dyspepsia .....	duration 2 months.	
	Advanced in pregnancy .....	more than 6 months.		Chronic bronchitis .....	duration not stated.	
	Feb. typhus .....	duration 8 days.		Diseased heart—hydrothorax .....	duration not stated.	
				anasarca, 2 months in hospital—died suddenly .....	duration not stated.	
				Acute hydrocephalus .....	duration 24 days.	
				Softening of fornix and septum lucidum—considerable effusion in ventricles—pia mater injected .....	duration not stated.	

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and active during the morning. Positive and weak in the evening.	Rain falling. Generally clear.	Rain was falling during the morning and continued to fall till about noon. The sky was about two-thirds covered with cloud during the afternoon. Cloudless but foggy in the evening.
MON.	Positive and very active throughout the day.	Overcast about noon—generally clear at other times.	The sky was cloudless from midnight until 11h. a.m. when it became nearly overcast, and remained so until 2h. p.m. Clear from 2h. 30m. p.m. till 6h. p.m. when it again became overcast. It was clear at 5h. p.m. and overcast at midnight.
TUES.	Positive and moderately active until 9h. a.m., positive and weak from that time until 3h. p.m., then positive and active till midnight.	Overcast. A thick drizzling rain falling occasionally.	A thin cirrostratus covered about one-half of the sky until about 4h. a.m. when it became overcast and remained so throughout the rest of the day. A drizzling rain was falling occasionally.
WED.	Positive and moderately active throughout the day.	Overcast.	Overcast throughout the day, with the exception of a few breaks a little before midnight.
THURS.	Positive and active throughout the day.	Overcast.	Overcast throughout the day.
FRI.	Positive and moderately active from midnight till 1h. 30m. p.m. Positive and weak from 2h. p.m. till midnight.	Overcast.	Overcast throughout the day. A few flashes of lightning were visible about midnight.
SAT.	Positive and active throughout the day.	Overcast.	Overcast throughout the day. A thin misty rain fell at intervals after 8h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been under repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the marmmast, and read each day at 6h. 30m. A.M., was 40.3; and the mean reading at 7h. 30m. P.M., was 42.7; the mean readings at the Royal Observatory for the same times were 39.3 and 41.0 respectively.

† The mean direction of the wind for the week is S.W., but during a large portion of the time the air was calm.

*During the Week ending Saturday, January 17th, 1846.*

## CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS OF THIRTEEN HOSPITALS (continued).

## St. Thomas' H.:-

Female 15, ulcerated and sloughing tonsils.....	duration
F. 34, diseased heart .....	*
M. 41, phthisis .....	*
M. 31, bronchitis chronica—phthisis.....	1 year
M. 24, phthisis.....	1 year

Male 48, delirium tremens .....	duration
See deaths by violence above.....	12 days
Dreadnought H.:-	
M. 24, phthisis.....	13 months
M. 46, { hemiplegia, left side .....	16 days
{ inflammation of membranes of brain, subarachnoid effusion, post mort.	

## DEATHS IN THE DISTRICTS OF KENSINGTON AND CHELSEA, CHIEFLY AS RETURNED BY MEDICAL CERTIFICATE.

Paddington, St. John:-	duration
M. 1, infantile fever—hydrocephalus .....	3 days
M. 43, pneumonia—consumption .....	*
M. 19, tubercular consumption .....	nearly 2 years
M. 72, fever—congestion of brain .....	2 weeks
F. 33, { chronic inflammation of duodenum .....	2 years
{ ramolissement, post mort.....	*
F. 23, { bronchitis .....	3 years
{ phthisis pulmonalis .....	9 months
F. 65, low fever, accelerated by old age .....	10 days

## Paddington, St. Mary:-

M. 1 hour, premature birth, not certified.....	*
M. 1, convulsions, not certified.....	*
M. 6 weeks, convulsions .....	4 days
F. 1, whooping cough—inflammation of the lungs .....	*
F. 66, bronchitis, of a spasmodic character .....	*

## Fulham:-

M. 65, aneurism .....	2 years
M. 4 months, whooping cough .....	4 months
M. 1, convulsions .....	suddenly
F. 66, disease of the heart—ascites.....	2 years and 6 weeks
F. 4, measles .....	2 weeks
F. 71, syncope .....	*

## Hammersmith, St. Paul's:-

M. 78, old age and chronic bronchitis .....	*
---	---

## Hammersmith, St. Peter's:-

M. 4, { bronchitis .....	4 days
{ pertussis.....	*
M. 7, measles .....	*
F. 65, natural decay .....	*
F. 2, pertussis .....	3 weeks
F. 9 months, convulsions, not certified—no medical attendant.....	12 hours

## Kensington Town:-

M. 2, measles—laryngitis .....	*
M. 10 months, inflammation of lungs, not certified .....	*
M. 2, measles, not certified .....	12 days
M. 1, infantile cholera .....	*
F. 8 months, measles—pneumonia .....	*
F. 30, exhaustion from difficult labour—delivered of a dead child .....	*
F. 3 weeks, marasmus .....	*

## Brompton:-

M. 41, phthisis .....	*
{ measles .....	3 days
{ eroup .....	2 days
M. 1, { pneumonia .....	10 days
{ convulsions, post mort.....	2 days

## Brompton (continued):-

M. 2 days, debility, not certified—attended by a midwife.....	duration
F. 71, disease of the brain .....	*
F. 26, debility—phthisis.....	*
F. 46, bronchitis—typhus mitior .....	8 days
F. 16, bronchitis .....	18 days
F. 24, { peritonitis .....	8 weeks
{ dropsy.....	2 weeks
{ diseased kidneys and left ovary enlarged—diseased spleen, p. m. ..	*

## Chelsea (South):-

M. 79, { paralysis .....	several years
{ phthisis, post mort.....	18 months
M. 74, morbus cordis—congestion of lungs .....	12 months
F. under 1, debility, not certified .....	*
F. 2, whooping cough and scarlet fever, not certified .....	12 days

## Chelsea (North West):-

M. 37, synocha .....	10 days
M. 74, paraplegia .....	3 months
M. 1, { tabes .....	several months
{ bronchitis .....	5 days
M. 74, natural decay .....	*
M. 65, apoplexy .....	12 hours
M. 12, tubercular hydrocephalus .....	*
F. 83, apoplexy .....	*
F. 1, scarlatina .....	6 days

## Chelsea (North East):-

M. 4, diarrhœa .....	8 days
F. 65, inflammation of kidneys and pleura .....	6 days
F. 27, disease of the liver .....	*
F. 72, cancerous disease of the stomach .....	some years
F. 39, { pulmonary consumption .....	for years
{ but it progressed rapidly after accouchement .....	8 weeks ago
F. 8 weeks, wasting and exhaustion—mother being consumptive, it did not prosper from its birth .....	about 4 weeks
F. 10 months, bronchitis—under treatment 7 days .....	*
F. 2, disease of the heart—a calculus in the ureter and right kidney; the left rather enlarged, post mort.....	*
F. 11 months, bronchitis—3 months ago had bronchitis; when convalescent, attacked with small pox, and when convalescent from it, another attack of brouchitis .....	14 days

## DEATHS BY SEVERAL CAUSES.

## Small Pox:-

M. 10 months, confluent small pox (1st attack), never vaccinated .....	6 weeks
{ Measles .....	10 weeks
F. 1, { pneumonia .....	9 weeks
{ small pox and teething.....	4 weeks
M. under 1, small pox, not vaccinated .....	6 weeks
F. 4, small pox—vaccinated when 3 or 4 months old—mark on right arm .....	*
F. 2, small pox, 18 months after vaccination .....	*
M. 8 months, { small pox.....	8 days
{ after vaccination.....	*
F. 5, { small pox.....	*
{ after vaccination.....	*
M. 5 months, { small pox.....	12 days
{ vaccination with effect (leaving marks) performed.....	18th Dec.
(See Small pox Hospital and district of Chelsea.)	

## Cancer:-

M. 60, carcinoma of stomach .....	12 months
F. 68, cancer mammae.....	11 months
F. 55, cancer mammae.....	*
M. 52, scirrhus liver—ascites .....	*
F. 62, polypus uteri (assigned to uterus in abstract) .....	many years
F. 81, cancer of the pylorus, post. mort.....	*
F. 66, scirrhus of the pylorus .....	6 weeks and 5 days
F. 58, malignant ulceration commencing with a wart, allied to cancer .....	6 years
F. 55, cancer mammae et recti .....	*
F. 76, cancer uteri .....	1 year
F. 49, cancer uteri .....	*
F. 45, scirrhus of intestine.....	8 months
F. 60, cancer mammae .....	2 years
F. 52, carcinoma uteri .....	*
F. 66, cancer of the foot.....	2 years
F. 46, { dry cancer of the liver, kidneys, and uterus .....	3 months
{ pneumonia, post. mort.....	3 weeks

## Cancer (continued):-

F. 60, cancer mammae.....	duration
F. 49, cancer .....	1 year
F. 38, cancer uteri .....	2 years
(See case in Chelsea.)	1 year

## Malformation:-

M. 7, months, { spina bifida .....	2 days
{ convulsions .....	*
F. 7, weeks, spina bifida .....	2 days
F. 5 months, chronic hydrocephalus and spina bifida .....	*
M. 1 day, supposed internal malformation producing convulsions .....	1 day
M. 4 days, { malformation of bowels, the rectum terminating in a cul-de-sac, post mort.....	*

## Hernia:-

F. 59, strangulated hernia .....	surgeon called in 1 hour before death
----------------------------------	---------------------------------------

## Childbirth:-

Note.—The time elapsing from commencement of labour to death should be invariably returned.

F. 21, puerperal peritonitis.....	*
F. 26, puerp. peritonitis after preternatural parturition .....	20 hours
F. 20, puerperal convulsions .....	1 day
F. 38, { childbirth .....	7 days
{ puerperal fever .....	*
F. 40, flooding .....	*

(See inquest above and case in Kensington.)

## Delirium tremens and Intemperance:-

M. 44, delirium tremens .....	1 week
M. 34, { delirium tremens .....	6 days
{ low fever.....	3 days
M. 56, delirium tremens .....	*

(See Hospitals.)

## RETURNS AFTER POST MORTEM EXAMINATION, ADDITIONAL TO THOSE WHICH ARE DISTINGUISHED ABOVE.

F. 1, convulsions during dentition .....	duration
M. 38, { cephalitis—abscess in the middle lobe on right side—general .....	2 days
{ ramolissement.....	*
M. 35, pneumonia .....	12 days
F. 66, fluid in the brain .....	*
F. 53, arachnitis .....	*
F. 57, bronchitis .....	*
F. 33, valvular dis. of heart—granular liver—granular kidneys—ascites, anasarca—hydrothorax—pulmonary apoplexy .....	indefinite
F. 8, hypertrophy of the heart .....	*
M. 62, { adhesion to the chest of long standing, tubercular deposits in the upper part of both lungs—great congestion—concentric hypertrophy of left ventricle .....	*

M. 4, dysentery .....	duration
M. 43, { disease of the heart, contraction of aortic orifice and dilatation of .....	3 weeks
{ aorta—hydrothorax and general dropsy.....	10 weeks; poorly before
F. 37, { ovarian dropsy .....	6 years
{ chronic peritonitis.....	*
F. 4, tabes mesenterica.....	3 months
M. 43, { bronchitis .....	4 weeks
{ pneumonia .....	11 days
M. 4, enteritis.....	5 days
M. 52, { asthma and pleurisy .....	some years
{ bronchitis and inflammation of lung.....	about 18 days
M. 44, paralysis (2nd attack).....	4 days

\* In the cases marked with an asterisk, the Medical Men or Coroners have failed to state the time in which the diseases of patients proved fatal.

## ERRATA IN LIST OF FORMER WEEK.

The verdict of Coroner's jury, "Specific disease of a kind undescribed, &c., was returned on two deaths which occurred in Middlesex Hospital, and should have been placed accordingly.

The last of "Miscellaneous Returns" to be placed to "Intemperance," and the three immediately preceding to be headed "Other Causes."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, January 17th, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 35 years	WIND					Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and moderately active at 1h. p.m.	Overcast—a light rain falling.	Overcast throughout the day, with light rain.
MON.	Positive and at times active from 9h. 20m. a.m. until midnight.	} Overcast.	Overcast throughout the day.
TUES.	Positive and active throughout the day. Sparks were exhibited.	} See General Remarks.	Overcast until 2h. a.m. at which time the moon was visible with a fine halo around her, and before 3h. a.m. the clouds were broken in every direction. This was the first time that a star had been seen since Jan. 7d. 12h. From 3h. a.m. until 10h. p.m. three-fourths of the sky were covered with cirrostratus and fleecy clouds. After 10h. p.m. only a small amount of cloud prevailed. Several fine corona were visible around the moon during the evening.
WED.	Positive and moderately active throughout the day.	} Generally overcast.	The sky remained pretty free from cloud until 1h. a.m., after that time it became nearly overcast and remained so with little exception until after 7h. p.m. At 9h. p.m. one-half of the sky was covered with cloud, but before midnight it was again overcast.
THURS.	Positive and weak during the morning. Positive and active during the afternoon and evening.	Overcast. } See General Remarks.	With the exception of a few breaks about noon the sky was covered with cloud until after 1h. p.m. From 3h. p.m. about one-third of the sky was covered with cloud, after that time it became overcast.
FRI.	Positive and frequently active throughout the day.	} Overcast with slight rain.	With the exception of a few breaks in the early part of the morning, the sky was overcast throughout the day. Rain was falling occasionally in the morning and evening.
SAT.	Positive and weak during the morning. Positive and active in the afternoon.	Overcast. Clouds occasionally broken.	Overcast with light rain until 5h. p.m.; at 7h. p.m. the clouds became broken for a short time, but before 10h. p.m. it was overcast. At 11h. p.m. the sky was cloudless.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been under repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 40°5; and the mean reading at 7h. 30m. P.M., was 42°7; the mean readings at the Royal Observatory for the same times were 39°3 and 41°4 respectively.

† The air has been calm throughout the week.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, January 24th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 4.]

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and weak throughout the day.	Overcast.	Overcast throughout the day. Very foggy in the morning.
MON.	Very little electricity was exhibited during the morning. At 1h. 30m. p.m. and at 9h. 20m. p.m. it was negative and moderately active.	Overcast—rain falling.	Overcast throughout the day. Rain began to fall at about 4h. a.m., and continued generally till midnight.
TUES.	Positive and moderately active at 9h. 20m. p.m. Positive and weak at midnight.	Cloudless. Overcast.	Overcast until 4h. a.m.; the sky then became cloudless, and remained principally so until noon; it then became about one-half covered with cloud, until 3h. 30m. p.m. It was afterwards nearly cloudless until 10h. p.m., and overcast again at midnight. Rain was falling occasionally until 3h. a.m.
WED.	Positive and weak from midnight until 9h. a.m.	Overcast.	Overcast throughout the day with occasional rain.
THURS.	Nothing was shewn during the morning. Positive and weak from 5h. 20m. p.m. till 5h. p.m.	Overcast.	Generally overcast until 2h. 30m. p.m.; the sky then became about one-third covered with cloud, and remained so until 4h. p.m., when it became overcast, and continued mostly so until midnight. Rain fell at 16h. and 16h. a.m.
FRI.	Negative and active at 9h. a.m. Positive and moderately active from 11h. 20m. a.m. to 1h. 30m. p.m. Negative and active at 2h. p.m.	Rain falling. Ditto. Rain falling heavily.	The sky was cloudless at 13h. 20m., and continued so for a short time only. At 15h. it was overcast, and remained so until 6h. p.m., when the sky became clear. It was overcast again at midnight. Rain was falling generally during the morning.
SAT.	Positive and moderately active from 9h. a.m. to 11h. 20m. a.m. Positive and moderately active from 5h. 20m. p.m. till midnight.	Overcast. Sky variable.	The sky was about one-half covered with cloud until 2h. 30m. a.m., when it became overcast, and remained so until 2h. p.m. It was partially clear during the afternoon. At 10h. the sky was cloudless, but overcast again at midnight. Rain was occasionally falling during the morning.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been out of repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 10th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 47.1; and the mean reading at 7h. 30m. P.M., was 49.3; the mean readings at the Royal Observatory for the same times were 46.0 and 47.6 respectively.

† The mean direction of the wind for the week is S.W.

Very frequently during this week the atmosphere has been in a state of electrical equilibrium, an unusual circumstance. On the night of the 19th of January, and on the morning of the 22nd heavy gales of wind occurred, the greatest pressures of the wind being about midnight, and 9h. a.m., respectively.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, January 31st, 1846.

ANNUAL SERIES VII.]										PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.										[No. 5.]	
Causes of Death		Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.			Causes of Death. EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 4, (ending Saturday, Jan. 24th.)												
Or the 908 deaths returned for the previous week, the diseases or injuries by which they were caused, were—												
(1) Certified by the medical attendant during last illness .....	794											
(2) Certified by verdict of Coroner's Jury .....	51											
(3) Not Certified .....	63											
(4) TOTAL .....	908											

Nos. 1 and 2, which consist partly of cases in hospitals, shew a rate of 93 per cent. in favour of <i>certified cases</i> , on the whole number of deaths. No. 3 includes cases returned by unqualified practitioners, together with 21 cases, in which it is reported that there was no medical attendant.												
NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry mark the duration of illness. The entries marked with an asterisk (*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.												

CORONERS' RETURNS OF DEATHS BY VIOLENCE.												
NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."												

Fractures or Contusions:—	duration	Injury of the head	duration	Burns:—	duration
Carpenter, 40, concussion caused by falling down stairs in a state of intoxication ... a few minutes		Daughter of a cigar maker, { inflammation of brain (no inq.) 10 days		Bartholomew's Hospital, daughter of a porter, 8, burnt by a spark falling on her pinafore, whilst snuffing a candle with her fingers, at Vine Court, Cripplegate .....	60 hours
F. 82, prolapsus uteri—natural decay, and the usual infirmities of old age, aggravated by an accidental fall which occurred: about 10 wks. since (no inquest)		M. 50, apoplexy, with epilepsy from previous injury to the head. (no inquest) .... some years ago		Daughter of a bricklayer, 5, burns of the face and hands, from her pinafore taking fire at a grate, while drying it .....	*
M. 62, mortal injuries to the head, caused by an accidental fall from a butcher's pent-house .....	*	Wounds:—		Son of the master of a mathematical school, 5, burns received by his night-gown accidentally taking fire .....	20 hours
Son of a labourer, 3, accidental death from fall, causing a blow on the head, and erysipelas .....	6 months.	Warehouseman, 50, inflammation of the lungs consequent upon a suicidal wound in his throat, made by him with a razor while insane .....	23 days	Poison:—	
Ship-scraper, 65, accidental death by a fall, and blow on his head in a dry dock .....	*	M. 63, suicide by cutting his throat with a razor—of unsound mind .....	*	Daughter of a cab-driver, 3 months, taking a small quantity of laudanum incautiously given to it, whilst in a state of ill health ..	*
Bartholomew's Hospital, widow of a lapidary, 60, accidentally run over by a private carriage, whilst crossing the top of the City-road, at Islington, causing external injuries ..	22 hours	Coal-merchant, 60, fracture of the skull caused by himself, by the discharge of bullets from a pistol—state of his mind at the time unknown—suicide .....	*	Bartholomew's Hospital, spinster, 26, poisoned herself by taking oxalic acid—temporary insanity, post mort. ....	1 hour
Bartholomew's Hospital, widow of a hair-dresser, 90, fracture of the left collar-bone and left thigh, from being run over by a cabriolet in Cheapside, whilst crossing the street .....	3 months	Drowning:—		F. 32, oxalic acid—suicide—insane .....	*
Labourer, 32, fracture of ribs on the left side of the chest, by whom unknown—the suspected persons having been wilfully withheld from the inquest by officers acting under the authority of a magistrate and the Commissioners of Police.		M., age and profession unknown, found dead in Bow Creek, apparently drowned—without marks .....	*	Daughter of a dressmaker, 8 weeks, misadventure from an overdose of laudanum, inadvertently given by her nurse .....	*
		Smith 46, accidentally drowned by a fall from a ship into the East India Export Dock .. how long under water not stated			
		Occasional waiter at an hotel, 37, suicide by drowning himself in the River Thames, being of unsound mind .....	how long under water not stated		

CORONERS' RETURNS, (ADDITIONAL TO THOSE IN HOSPITALS) OF DEATHS BY DISEASE IN WHICH THE CAUSES ARE ASSIGNED.						
		duration			duration	
F. 69, disease of the heart . . . . .	no previous confinement from illness		F. 23, { natural causes, ulceration of the bowels, with escape of contents of the stomach into the cavity of the belly about 12 hrs. (This case was returned before by Medical Certificate.)		F. 48, natural death, apoplexy . . . . .	*
F. 1, inflammation of lungs and air passages, from natural causes . . . . .	*		F. 19, exhaustion, produced by disease of the lungs . . . . .	*	M. 7 weeks, natural death, fit . . . . .	*
M. 30, apoplexy—blood at the base of the brain, post mort. . . . .	*		F. 47, extravasation of blood in the brain, produced by natural disease . . . . .	*	F. 37, natural death—bronchitis . . . . .	3 days
M. 56, natural, had angina pectoris . . . . .	1 year		M. 76, apoplexy . . . . .	*	M. 64, natural death—ossification of the valves of the heart, with effusion in the left cavity of the chest . . . . .	*
(died sitting in his office)			M. 9 mon., convulsions . . . . .	5 weeks	M. 1, natural debility and decay, consequent on the want of breastmilk . . . . .	*
					M. 74, natural death—asthma . . . . .	*

CORONERS RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.					
M. 4 hours, unknown—a <i>post mort.</i> examination disclosed no cause of death; every part was healthy	<i>duration</i>	M. stillborn, found in John Street, Adelphi, <i>p.m.</i>	<i>duration</i>	M. 40, natural . . . . .	<i>duration</i>
M. 76, natural . . . . .	<i>through previous confinement from illness</i>	M. 37, natural—found insensible in bed		F. 1, natural . . . . .	<i>no previous medical attendance</i>
M. 36, natural . . . . .	<i>no dangerous previous illness</i>	M. stillborn; the parents and who exposed it not known—found in an area.		M. 1, precise cause unknown. . . . .	<i>no previous confinement from illness</i>
M. 51, natural . . . . .	<i>no previous confinement</i>	M. under 1, natural . . . . .	<i>no medical attendant at the time of death</i>	M. 7 mon., natural . . . . .	<i>sudden</i>
		M. 49, natural . . . . .	<i>no dangerous previous illness</i>	F. 3 mon., natural—death by visitation of God . . . . .	<i>no previous illness</i>
				M. 45, natural death—caught cold. . . . .	<i>*</i>

		M. 18, caries of the spine . . . . .	*		

## CASES OF SMALL POX, SYPHILIS, CANCER, MALFORMATION, HERNIA, DIABETES, CHILDBIRTH, OPERATIONS, ETC., INTemperance, AND PRIVATION.

<b>Small Pox:</b>		<b>Cancer (continued):</b>		<b>Childbirth:</b>	
F. 2, small pox—natural . . . . .	8 days	F. 49, exhaustion consequent on cancer mammæ . . . . .	7 years	Note.—The time elapsing from commencement of labour to death should be invariably returned.	
M. 3, small pox (1st attack—not vaccinated) 12 days		F. 52, scirrhus uteri et recti . . . . .	*	F. 33, puerperal peritonitis . . . . .	3 days
M. 7 months, { hydrocephalus . . . . . 6 weeks varicella . . . . . 11 days		F. 53, cancer mammae . . . . .	some years	F. 48, abortion—phlebitis . . . . .	4 days
M. 21, confluent small pox . . . . .	14 days	F. 62, scirrhus recti . . . . .	26 months	F. 48, inflammation of peritoneum . . . . .	13 days
M. 1, small pox—vaccinated . . . . .	*	F. 57, cancer uteri . . . . .	*	Query—Did this occur after childbirth?	
<b>Syphilis:</b>		F. 80, proclivencia uteri, ulceration . . . . .	*	F. 38, peritonitis (?) . . . . .	13 days
F. 5 weeks, syphilitic eruption . . . . .	1 week	F. 43, cancer—effusion in the chest . . . . .	*	<b>Operation, &amp;c.:</b>	
M. 47, syphilis—consumption . . . . .	6 months	F. 61, cancer mammae . . . . .	8 years	M. 38, { phthisis . . . . . *	
<b>Cancer:</b>		F. 33, fungoid tumor in mesocolon . . . . .	6 months	F. 2, { amputation below the knee . . . . . 2 years catarrh . . . . . 25 days	
F. 43, scirrhus mammae . . . . .	about 2 years	In the post mort. exam. an entire absence of the uterus was observed.		erysipelatos inflammation following the application of a blister to her chest, which terminated in mortification.	
F. 43, cancer of the neck . . . . .	*	<b>See Hospitals, &amp;c.</b>		<b>Intemperance:</b>	
F. 39, { cancer mammae . . . . . 6 years hydrothorax . . . . . *		<b>Malformation, &amp;c.:</b>		M. 53, { fever . . . . . 18 days chronic bronchitis . . . . . *	
F. 73, { malignant tumour . . . . . 7 years apoplexy—paralysis . . . . . 7 months		F. 13, hypertrophy of the heart, with patulency of foramen ovale, and disease of lungs . . . . .	from birth	disordered liver from intemperance . . . . .	*
F. 50, { Cancer . . . . . 2½ years mortification . . . . . 2 weeks		F. 11 weeks, spina bifida . . . . .	from birth	<b>Privation:</b>	
		M. 1, marasmus—double inguinal hernia— umbilical hernia . . . . .	all congenital	F. 30, exhaustion from mania, and refusal of food, post mort. . . . .	*
		<b>Diabetes:</b>			
		M. 32, saccharine diabetes . . . . .	nearly 1 year		
		M. 29, diabetes . . . . .	18 months		

## RETURNS AFTER POST MORTEM EXAMINATION, ADDITIONAL TO THOSE WHICH ARE DISTINGUISHED ABOVE.

<b>33, { intussusception . . . . . 36 hours perforation of the bowels . . . . . *</b>		<b>F. 2, { whooping cough . . . . . 1 month convulsions . . . . . 6 hours</b>		<b>F. 56, { chronic bronchitis—ossification of the tricuspid and mitral valves . . . . . *</b>	
52, enlargement of spleen (2 lbs. 1 oz.), water in chest and left lung . . . . .	*	tuberculated lungs—effusion of serum on the surface of the dura mater— brain highly congested—dropsy of the pericardium . . . . .	*	partial emphysema . . . . .	6 years
4 mon., marasmus—diarrhoea . . . . .	ill from birth			fever typhoid . . . . .	16 days
10, { diarrhoea . . . . . 14 months diarrhoea . . . . . 2 months		M. 89, bronchitis . . . . .	several years	F. 14, { diarrhoea . . . . . 6 days ulceration of the liver . . . . . *	
pertussis . . . . .	3 weeks	M. 88, { gallstones . . . . . unknown chronic inflammation of liver . . . . . *		M. 19, consumption . . . . .	8 months
4, { pneumonia . . . . . 12 days tuberculated lungs—adhesion of pleura pulmonalis (left side) . . . . .		M. 72, { chronic emphysema . . . . . 15 or 16 years phthisis pulmonalis . . . . . unknown		F. 42, { ovarian tumour . . . . . many years extreme exhaustion, produced by severe pain and inability to take food . . . . . *	
whooping cough . . . . .	1 month	M. 22, phthisis pulmonalis . . . . .	45 days	F. 22, an ulcer of the size of a shilling, perforating the wall of the stomach—has been ailing for months, but urgent symptoms did not come on till about 30 hours before death.	
5, { pneumonia . . . . . 9 days pleura pulmonalis inflamed . . . . . *		F. 1, enlargement of liver—tubercle of lungs	3 weeks		
tuberculated lungs . . . . .	*	F. 12, consumption . . . . .	*		
		hypertrophy of heart and enlargement of aorta . . . . .	*		
		M. 56, { diseased kidneys . . . . . 1 year dysentery . . . . . 14 days			

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, January 31st, 1846.

Day.	Phases of the	Mean height of the Barometer, from 12 Observations, and reduced to 32 degrees Fahrenheit.	Readings of Thermometers										Diference between the Dew Point Temperature and Air Temperature			WIND							Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																					
			Dry			Dew Point Mean	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diff. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative but very weak at 10 a.m. Slightly positive in the evening.	Overcast. Rain falling heavily. Overcast.	Generally overcast throughout the day.—Rain was falling occasionally.
MON.	Positive and weak until 11h. a.m. when it became negative and very active and con- tinued so for about 20 minutes. Nothing was shown during the rest of the day.	Overcast—rain falling occasionally	Overcast until 1h. 30m. p.m. with rain generally falling heavily; At that time the clouds broke, and the sky remained about one-half covered with cloud until 3h. 20m. p.m. when it became overcast and remained so until nearly midnight when it suddenly cleared off. Rain was falling heavily at 3h. 30m. p.m.
TUES.	Positive and moderately active at 9h. 20m. a.m.	Small breaks in all directions.	The greatest part of the sky was clear until noon when it became overcast and remained so during the remainder of the day. Rain was falling occasionally during the evening.
WED.	No electricity was exhibited	during this day.	Overcast with occasional rain until noon; the clouds then became slightly broken, and at 10. 20m. p.m. the sky was nearly free from cloud. It was about one-half covered until 6h. p.m. when it became overcast and rain fell; it however cleared off in about an hour afterwards and the sky con- tinued cloudless until midnight.
THURS.	No electricity was exhibited	during this day.	The sky became overcast at about 3h. a.m. and remained generally so until 7h. p.m. when it was about one-third covered with cloud, and continued so until 9h. 30m. p.m.; it then became overcast and remained so until midnight.
FRI.	Positive and moderately active at 1h. 20m. p.m.	A slight rain falling.	The sky was generally clear until 9h. 30m. a.m. when it became overcast and continued so during the remainder of the day. A very thin rain was falling occasionally during the afternoon.
SAT.	Positive and weak from 11h. a.m. till 7h. 30m. p.m.	The sky variable.	Overcast until 9h. a.m. when the clouds became slightly broken, and the sky was very variable during the afternoon. It was overcast at 9h. p.m. and remained so afterwards. The wind was blowing rather strongly about midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been under repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 46.8; and the mean reading at 7h. 30m. p.m., was 49.2; the mean readings at the Royal Observatory for the same times were 45.3 and 48.3 respectively.

† The mean direction of the wind for the week is W.S.W.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, February 7th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 6.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 5, (ending Saturday, Jan. 31st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry mark the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

duration	duration	duration
Fractures and Contusions:— Guy's Hospital, policeman, 22, effects of an injury to his right foot by falling into a dry dock at Woodwich in a fog..... 14 days Son of a carpenter, 9, accidental fall from a see-saw..... * Labourer, 54, fractures of the ribs, caused by an accidental fall upon the chest..... * Son of a labourer, 3, hæmorrhage from a cut-wound of the head, received by falling out of a chair against an iron fender accidentally..... 30 hours Sawyer, 40, accidentally run over by a horse, causing congestion of the brain..... 1 week Guy's Hospital, equestrian, 65, fractured ribs and injury to his lungs by being thrown out of a chaise at Guy Street, from the horse taking fright..... 16 hours Guy's Hospital, son of a labourer, 14, extensive laceration of his left leg, caused by the wheel of a waggon, which had knocked him down, whilst he was incautiously walking along a new railway near Carshalton..... 3 days	St. Thomas's Hospital, mate of a schooner, 31, effects of a fractured leg by a blow from a winch handle in the schooner "Gratitude," at Fresh Wharf, whilst unloading the vessel..... about 6 weeks Son of a bricklayer, 15, accidentally crushed by a beam in a malt mill..... * F. new-born (unknown), found dead with marks Wounds:— St. Thomas's Hospital, M. 36, tetanus from a wound in the instep caused by a slight injury received (no inquest)..... in 1843 Guy's Hospital, surgeon, 46, cutting his throat with a knife, during an attack of delirium tremens, in Guy's Hospital..... 9 hours Drowning:— M. 22, drowning by throwing himself off the bridge into the Regent's Canal, whilst in a state of temporary insanity from the effects of drink..... how long under water not stated	Seaman 35, found drowned at Wapping in the River Thames. F. age and condition unknown, found drowned in the River Thames at Wapping. Engineer, 22, found dead in the waters of the Thames and South West India Dock, apparently drowned. Burns:— St. Thomas's Hospital, daughter of a brick-maker, 3, burnt by her clothes taking fire whilst at play in her father's apartment, at Park-road, Clapham..... 12 hours Daughter of a skin-dresser, 4, mortal injuries from an accidental burn, by her clothes taking fire..... *

### CORONERS' RETURNS, (ADDITIONAL TO THOSE IN HOSPITALS) OF DEATHS BY DISEASE IN WHICH THE CAUSES ARE ASSIGNED.

duration	duration	duration
M. 49, natural causes—supposed strangulation of the intestines..... 12 hours M. 3 months, natural death—inflammation of the chest..... * M. about 52, swelling of the tonsils from natural disease; severely ill..... 4 hours F. 37, natural—extravasation of blood on the brain..... * M. 56, rupture of the heart, post mort. died instantaneously	F. 39, { childbirth..... 9 days natural death—collapse of the heart died instantaneously M. 23, natural death, accelerated by excessive drink..... * F. 45, natural death from diseased heart..... * M. 3, natural death; inflammation of the covering of the brain..... * F. 6 weeks, { hypertrophy of the brain, probably 6 weeks softening of the brain..... nearly 6 weeks convulsions and coma..... 3 days	M. about 70, natural death—apoplexy..... 4 hours. M. 64, natural death—ossification of the large vessels of the heart, post mort. died instantaneously M. 9 months, natural death—thymic asthma or false croup..... 10 minutes M. 1, { natural death—measles and dentition 3 weeks (convulsion fits)..... 4 hours M. 23, natural death from bronchitis..... * M. 30, natural death from low fever..... 8 days

### CORONERS RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

duration	duration	duration
F. under 1, natural—no medical attendance, no previous illness	M. 12 days, natural..... no previous illness M. 68, natural..... no previous illness	F. 68, natural..... no dangerous previous illness F. 38, natural causes..... *

### THIRTEEN HOSPITALS.—CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS.

duration	duration	duration	duration
St. George's H.:— M. 49, erysipelas..... * M. 57, pulmonary consumption..... * Westminster H.:— M. 29, cerebral meningitis..... 21 days M. 30, fever..... 6 hours F. 2, { paralysis..... 5 hours died comatose—cerebral congestion post mort. * F. 35, general debility..... 1 year Charing Cross H.:— typhus..... 14 days M. 44, { ill without medical care..... 7 days under private practitioner..... 3 days in hospital..... 4 days Middlesex H.:— M. 42, bronchitis and emphysema..... 3 months	University College H.:—No Returns. Fever H.:— typhus..... 30 days pleuritis..... about 25 days M. 14, { lymph and serum in pleura..... 6 days ulceration of intestines—healing post mort. * Small Pox H.:— F. 21, small pox, natural, confluent..... 8 days King's College H.:—No Returns. Bartholomew's H.:— M. 40, hæmatemesis..... * M. 36, pneumonia..... * M. 24, effusion on the brain, owing to ossification of the arteries..... * M. 36, disease of the heart..... * F. 67, { strangulated femoral hernia..... 4 days operation—mortification..... *	Bartholomew's H. (continued):— F. 50, emphysema with diseased heart..... * F. 17, phthisis..... * F. 31, bronchitis with emphysema..... * F. 33, diseased heart..... * London H.:—No Returns. Guy's H.:— M. 19, phthisis..... * F. 43, general dropsy..... * F. 55, general dropsy..... 23 weeks M. 24, phthisis..... * St. Thomas' H.:— F. 45, paralysis..... * M. 16, rheumatism—endocarditis..... 5 weeks M. 44, fever..... 11 weeks M. 44, erysipelas..... * M. 54, icterus..... 6 months M. 43, hydrops articuli..... 24 years Dreadnought H.:—No Returns.	

DISTRICTS OF ST. PANCRA8, ISLINGTON, HACKNEY, AND ST. GILES.—CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

Tottenham:—		Camden Town (continued):—		Hackney (continued):—	
M. 5 mon., eczema of scalp, face, and chest, from birth, after which, being vaccinated, the cow pox spread from the arm to the face, neck, and breast . . . . .	15 days	M. 1, measles . . . . .	4 days	M. 84, { chronic catarrh . . . . .	5 years
Death was preceded by convulsions during two days		M. 9 mon., pneumonia . . . . .	9 days	M. 84, { acute, with fever . . . . .	10 days

F. 73, { ascites—hydrothorax . . . . .	*	M. 43, phthisis pulmonalis . . . . .	2 years	F. 18 mon., hooping cough, not certified—no medical attendant	
F. 73, { shaking palsy . . . . .	1 year	M. 29, stricture of some portion of the bowels . . . . .	8 days	North St. Giles in the Fields:—	
Camden Town:—		F. 8 mon., pneumonia . . . . .	5 days	M. 1 year, hooping cough . . . . .	7 days
M. 4, mesenteric disease—convulsions . . . . .	*	F. 78, natural decay . . . . .	*	M. 8 mon., convulsions (not certified) . . . . .	*
M. 78, natural decay . . . . .	*	F. 4 mon., pneumonia . . . . .	5 days	St. George, Bloomsbury:—	
M. 3, { scarlet fever . . . . .	5 weeks	F. 39, phthisis pulmonalis . . . . .	some years	M. 48, consumption . . . . .	*
M. 3, { dropsy . . . . .	2 weeks	F. 27, bronchitis . . . . .	*	M. 69, bronchitis—diarrhoea . . . . .	10 days
		Hackney:—		F. 56, decay of nature, not certified, no medical attendant	
		M. 55, diseased lungs . . . . .	*	F. 12 weeks, convulsions . . . . .	*
		M. 83, { chronic bronchitis . . . . .	3 years		
		M. 83, { acute purpura . . . . .	1 month		

DEATHS BY SMALL POX, SYPHILIS, HÆMORRHAGE, CANCER, MALFORMATION, HERNIA, STONE, CHILDBIRTH, DELIRIUM TREMENS, AND INTemperance.

Small Pox:—		Cancer (continued):—		Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
M. 6, confluent small pox (not vaccinated) . . . . .	4 days	F. 52, { scirrhus mammae . . . . .	*	F. 23, puerperal fever . . . . .	8 days
M. 9 mon., small pox (without previous vaccination)—bronchitis . . . . .	*	F. 52, { operation performed May 20th, 1844, ulceration commenced Aug. 3, 1845		F. 33, puerperal fever . . . . .	14 days
F. 3, { small pox . . . . .	11 days	M. 54, cancer of the lower jaw . . . . .	4 months	F. 31, puerperal fever . . . . .	*
M. 7, { twice vaccinated without effect		M. 53, cancer in the mouth . . . . .	*	F. 34, phlebitis—puerperal fever . . . . .	12 days
M. 7, hydrocephalus—small pox (natural) . . . . .	*	F. 46, cancer uteri . . . . .	2 years	F. 36, { synochus . . . . .	10 weeks
M. 1, natural small pox . . . . .	28 days	M. 70, carcinoma lingue . . . . .	1 year	F. 36, { abortion . . . . .	*
M. 2, small pox . . . . .	7 days	F. 43, { nephro-pyelitis . . . . .	*	F. 36, { diarrhoea . . . . .	10 days
See Small Pox Hospital.		F. 43, { cancer uteri . . . . .	*	F. 26, scrofulous disease of the spine, and contracted pelvis—irritative fever consequent on the diseased condition—complicated with the puerperal state—complicated (assigned in abstract to scrofula.)	
Syphilis:—		F. 43, { chronic peritonitis (post mort.) . . . . .	long standing		
M. 7 wks., syphilis . . . . .	*	See dist. of Regent's Park.		F. 21, { pneumonia . . . . .	5 days
F. 9 mon., syphilis . . . . .	*	Malformation:—		F. 21, { childbirth . . . . .	3 days
M. 32, from the effects of venereal disease . . . . .	3 months ago	M. 7 d., constant vomiting from malformation.		F. 31, childbirth, followed by apoplexy . . . . .	24 hours
Hæmorrhage:—		M. 2 mon., malformation of the head—convulsions from pressure on the brain.		F. 22, { phthisis pulmonalis . . . . .	2 years
F. 44, epistaxis—general debility . . . . .	*	M. 9 days, malformation of the heart.		F. 22, { bronchitis 18 days after childbirth (assigned in abstract to phthisis.)	
M. 4 mon., teething; hæmorrhage from the bowels, induced by passion . . . . .	*	M. 1 hour, malformation.		F. 34, { phthisis . . . . .	2 years
See dist. of Tottenham.		F. 37, { congestion of the lungs from deformity . . . . .	1 year	F. 34, { pregnancy—delivery . . . . .	10 days
Cancer:—†		F. 37, { chronic bronchitis . . . . .	7 days	F. 34, { pregnancy—delivery . . . . .	10 days
F. 45, cancer uteri . . . . .	2 months	Hernia:—		(assigned in abstract to phthisis.)	
F. 44, scirrhus ovarii . . . . .	6 months	M. 66, { diseased liver . . . . .	several weeks	See Coroner's Returns.	
F. 52, cancer mammae . . . . .	15 months	M. 66, { dropsy . . . . .	3 weeks	Delirium tremens and Intemperance:—	
F. 35, cancer mammae . . . . .	2 years	M. 66, { ventral hernia . . . . .	old standing	M. 33, { inflammation of the foot . . . . .	8 days
F. 77, cancer mammae . . . . .	3 years	M. 2 days, congenital disease, umbilical hernia, in which the bowels were external, and no space in abdomen to contain them.		M. 33, { delirium tremens . . . . .	6 days
F. 40, cancer uteri . . . . .	*	Stone:—		M. 45, delirium tremens . . . . .	3 days
{ scirrhus mammae . . . . .	6 years	F. 56, { renal calculus . . . . .	1 year	M. 41, { inebrietas . . . . .	many years
F. 84, { ending in cancer—death by stupor from probable extension of cancerous disease to the brain . . . . .	*	F. 56, { hydrops . . . . .	18 months	M. 37, delirium tremens . . . . .	48 hours
F. 49, { cancer (scirrhus) mammae . . . . .	*	F. 56, { peritonitis . . . . .	*		
{ phlebitis . . . . .	5 days	M. 71, { stone . . . . .	about 5 years		
F. 35, { cancer mammae . . . . .	9 months	F. 71, { debility . . . . .	*		
F. 35, { hectic fever . . . . .	2 months				
F. 68, cancer mammae . . . . .	3 years				

RETURNS AFTER POST MORTEM EXAMINATION, ADDITIONAL TO THOSE WHICH ARE DISTINGUISHED ABOVE.

F. 1, { hooping cough . . . . .	6 months	M. 30, { aneurism of the arch of aorta . . . . .		M. 65, rupture of the spleen . . . . .	died suddenly
{ pneumonia with congestive and incipient tubercles of the lungs posterior	*	M. 30, { hypertrophy of the heart . . . . .		M. 4, { fever . . . . .	4 days
hydrocephalus—disease of lungs—		F. 90, bronchitis . . . . .	*	M. 4, { convulsions . . . . .	4 hours
miliary tubercles . . . . .	3 months	F. 50, phthisis . . . . .	*	{ congestion of the brain . . . . .	*
severely ill . . . . .	3 weeks	M. 2, pneumonia . . . . .	16 days	F. 17, { disease of the hip-bone . . . . .	15 months
F. 50, morbus cordis—dilatation—disease of mitral and tricuspid valves . . . . .	*	M. 5 months, pneumonia . . . . .	10 days	F. 17, { hectic fever . . . . .	18 months
M. 2, hydrocephalus . . . . .	14 days	{ cyst in the chest, containing fat and hair . . . . .	duration uncertain	M. 45, diseased and enlarged spleen without ague . . . . .	3 years
F. 31, pneumonia—enteritis . . . . .	*	F. 22, { pleuritis—empyema opening externally . . . . .	2 years	F. 1, acute hydrocephalus . . . . .	16 days
M. 34, { catarrhus . . . . .	5 months	{ destruction of the left lung . . . . .	*	F. 21, { softening of the brain . . . . .	several months
{ abscesses of the lungs, and marasmus	21 days			{ rupture of a blood vessel on the brain	5 days

† In returning diseases of this class, the Latin names of parts should be used in preference to the vernacular; a rule which is generally adopted in forming this list.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, February 7th, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND					Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0-10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point Mean from 12 12 Rhts	Highest in the sun, as shown by a self-regist- ring Thermometer	Lowest on the grass, as shown by a self-regist- ring Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diff. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and weak at 9h. p.m.	Overcast.	Overcast during the morning. In the evening the sky was nearly cloudless, but before 9h. p.m. it became overcast. A small halo was visible around the moon at 8h. p.m. Rain commenced to fall shortly before midnight, with the exception of short intervals between 5h. a.m. and 10h. a.m., and after 7h. p.m. The wind was blowing very strongly throughout the day.
MON.	Negative and active from 1h. a.m. to 8h. a.m. Positive and moderately active from 10h. a.m. until midnight.	} Rain falling. } Generally overcast.	The sky continued overcast until 9h. a.m.; after that time the clouds became broken, and during the remainder of the morning the sky was half covered with cumuli, cirrostrati, and loose scud. Before 5h. p.m. it was again overcast, and remained so until midnight. Rain was falling in the early part of the morning, but it ceased at 7h. a.m.
TUES.	Positive and moderately active from midnight to 1h. a.m.	} Overcast.	The sky was overcast throughout the day, and a thin drizzling rain was falling in the evening. The wind was blowing in moderate gusts at 9h. p.m.
WED.	Positive and weak throughout the day.	See General Remarks.	The clouds became broken shortly after midnight, and for the remainder of the morning the amount of cloud was small, the prevailing clouds being detached cumuli. In the afternoon a few cirrocumuli were visible, and afterwards cirrostratus and scud were prevalent. A lunar halo of 23° radius was visible at 9h. p.m.
THURS.	Positive and weak, and occasionally negative but weak, from midnight till 8h. a.m. Negative and active at 10h. a.m. Positive and active during the remainder of the day.	} Overcast. Rain falling. } A great gloom. } Overcast.	Overcast with rain until 8h. a.m.; at that time the sky became cloudless for a short time. At 10h. a.m. a great gloom prevailed, which lasted until 10h. 30m. a.m. The sky during the remainder of the day was covered with cirrostratus.
FRI.	Positive and weak in the morning. Positive and moderately active in the evening.	} Generally overcast till 3h. a.m.; after- wards cloudless. } Generally overcast.	Overcast until 3h. a.m.; shortly after that time the clouds cleared off, and until 1h. p.m. the sky was generally cloudless. In the afternoon and evening the principal clouds were cirrostratus and scud. Several coronæ and imperfect halos were visible around the moon in the evening. The wind was blowing strongly after 7h. p.m.
SAT.	Positive and active, and occasionally negative and active, from 1h. 22m. p.m., to 1h. 31m. p.m. Positive and very active, and occasionally negative, from 1h. 40m. p.m., to 1h. 53m. p.m. Sparks were frequently shewn.	} Rain falling heavily. } A squall of wind and rain.	Overcast until 1h. 30m. p.m., when the clouds became broke, and the sky continued cloudless throughout the remainder of the day. Rain was falling occasionally from 9h. 10m. a.m. to 1h. 40m. p.m. A squall of hail fell at 1h. 46m. p.m. The wind was blowing strongly throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer has been out of repair during the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 43.0; and the mean reading at 7h. 30m. P.M., was 45.3; the mean readings at the Royal Observatory for the same times were 41.5 and 43.5 respectively

† The mean direction of the wind for the week is W.S.W.

A TABLE OF  
**Births and Deaths registered in the Metropolis,**  
*During the Week ending Saturday, February 14th, 1846.*

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 6,  
(ending Saturday, Feb. 7th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry mark the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Hanging and Suffocation:—	duration
In St. Thomas' Hospital, moppmaker, 52, decelerium, arising from a wound in the forehead, produced by accidentally falling against a cask in a warehouse.	*	F. about 27, not known, found drowned without marks of violence, under an arch of Westminster-bridge.	*	M. new born, parents unknown, strangulation by what means unknown—wilful murder by some person or persons unknown. (The child was found in the Serpentine.)	*
F. 9 months, accidental fall on the head, supposed fracture of the base of brain (no inquest).	*	M. 24, drowned himself—insane. how long under water not stated	*	Widow, without profession, 64, hanged herself in a temporary state of insanity.	*
M. 5, mortal injuries from pressure by a horse against a wall accidentally	25 minutes	Bargeman, 37, found dead without marks—apparently drowned.	*	Burns:—	*
In St. Thomas' Hospital, carrier, 47, sloughing of the back, arising from the confinement necessary in consequence of a fractured thigh from a waggon-wheel accidentally going over him.	*	Sweep, 21, accidentally drowned in the River Thames, by falling from a steam-vessel.	*	Son of a glass-cutter, 4, burns of the body from taking lucifer matches into bed, and setting fire to his gown	5 days
In St. Thomas' Hospital, policeman, in the employment of the South Western Railway, 40, fracture of the ribs, occasioned by his being accidentally knocked down by a carriage.	*	M. unknown, about 45, found drowned in the River Thames without marks of violence—by what means no evidence.	*	F. 82, burn (no inquest)	4 weeks
(It should have been stated whether it was a railway carriage.)	*	Seaman of the Thomas and Robert, of North Shields, 26, drowned by falling out of a ship's boat into the River Thames, at Rotherhithe	how long under water not stated	The above return is obviously defective.	*
		Lighterman, 33, found drowned without marks of violence—by what means no proof—supposed to have fallen from a barge in the River Thames.	*	Two labourers, 19 and 16, suffocation and burning by a certain composition used in making fire-works, being accidentally ignited	instantly
				Poison:—	*
				F. 40, natural death, which may have been accelerated by an overdose of laudanum taken as a sedative, but not to destroy life	*

## CORONERS' RETURNS, (ADDITIONAL TO THOSE IN HOSPITALS) OF DEATHS BY DISEASE IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 7 wks., natural death, of a convulsion fit.	*	M. about 65, serous apoplexy (post mort.), found dead in bed	duration of attack not known	M. 46, natural death—precise cause not known supposed to be disease of the lungs	*
F. 15, natural death, of a fit	*	M. 35, natural—attack of paralysis in the right side	11 hours	M. 40, natural death—disease of the lungs	*
F. 3 mon., congestion of blood in the brain, produced by natural causes.	*	F. 44, { disease of the heart fatty degeneration.	several months	M. 45, natural death—cramp	*
M. 79, natural; symptoms of diseased heart.. not under medical treatment.	*	M. 49, natural death—rupture of a vessel from varicose legs	*	F. 1, natural death—convulsions	*
M. 5 mon., natural—disease of lungs..... a long time no medical advice.	*	M. 1, natural death—decline	*	F. 75, natural death—ossification of the valves of the heart	*
M. 74, rupture of the aorta, caused by natural disease	*	F. 4 mon., found dead without marks—convulsions.	*	M. 56, natural death by the visitation of God—hypertrophy of the heart.	*
M. 1, { pneumonia and bronchitis..... 10 days hooping cough..... 6 weeks neglected by the parish surgeon during several days.	*	F. 66, natural death from a fit.	*	M. 39, natural death from ruptured vessel, and hemorrhage therefrom	instantaneous
		F. 7, strangulation from the hooping cough	*	M. 60, natural death—bronchial affection	15 minutes
				F. 77, natural death—apoplexy of the lungs	15 minutes
				F. 53, natural death from disease of the heart	instantly

## CORONERS RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 47, natural debility from bodily illness.	*	F. 28, natural	no previous illness	F. 57, found dying in Essex-street—afterwards died at the Workhouse, but from what cause not known.	*
F. newly born; whether born alive or not no evidence—no marks of violence.	*	F. 12 wks., found dead in bed without marks.	*	M. 2 days, found dead in bed without marks.	*
M. 7 wks., natural	no previous illness	F. 55, natural death.	*		

## THIRTEEN HOSPITALS.—CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS.

St. George's II.—	duration	St. George's II. (continued):—	duration	Charing Cross II. (continued):—	duration
M. 20, { stoppage of the bowels operated on for fistula	8 days previous	F. 52, cachexia	*	F. 46, hæmorrhage from the lining membrane of the intestines (post mort.)	*
M. 34, heart dilated—mitral valves thickened, post mort.	*	F. 20, pulmonary consumption (post mort.)	*	M. 17, chronic meningitis (post mort.)	*
M. 27, pulmonary consumption, (post mort.)	*	F. 29, pulmonary consumption (post mort.)	*	Middlesex II.—	
M. 40, pulmonary consumption, (post mort.)	*	F. 16, scrofulous abscess of the foot, (post mort.)	*	M. 44, bronchitis and emphysema	1 year
M. 50, bronchitis (post mort.)	*	F. 34, dropsy	*	M. 53, hæmoptysis	34 days
M. 47, phthisis—scirrhus of pylorus post mort.	*	Westminster II.—		F. 41, cancer uteri	9 months
M. 50, encephaloid of liver and bladder, with hæmaturia—scirrhus of sigmoid flexure of colon, connected with the bladder (post mort.)	*	M. 42, { rheumatic fever pericarditis (post mort.)	17 days	F. 40, aneurism of aorta	time not known
F. 27, malignant disease of uterus (post mort.)	*	F. 48, continued fever (post mort.)	12 days	Also 1 case not yet reported.	
		Charing Cross II.—		University College II.—No Returns.	
		M. 47, { empyema (post mort.) in hospital 46 days	*		

# THIRTEEN HOSPITALS.—CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS (continued).—

<b>Fever H.:</b>		<b>King's College H.:</b>		<b>St. Thomas' H.:</b>	
M. 45, { fever, in hospital 11 days, from St. Martin's workhouse. . . . .	18 days	M. 40, phlegmonous erysipelas . . . . .	3 weeks	F. 11 mon., fever . . . . .	*
F. 55, { fever, in hospital 9 days, from St. Mary's, Newington. . . . .	13 days	M. 35, { phthisis . . . . .	1 year	F. 21, erysipelas . . . . .	7 days
F. 43, { fever, from St. Mary's, Newington. . . . .	*	M. 51, infiltration of urine—stricture. . . . .	*	<b>Dreadnought H.:</b>

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	The conducting line of the electrical apparatus was broken.		The sky was generally one-half covered with cirrostratus and scud throughout the day—the wind blowing in strong gusts from 10h. a.m. to 2h. p.m.
MON.	At 5h. p.m. the electrical apparatus was raised after repair, and from that time until midnight positive electricity was shewn.	Generally cloudless.	Cloudless until 2h. a.m.: from that time until 7h. a.m. the amount of cloud was variable. From 7h. a.m. until 6h. p.m. the greater part of the sky was covered with cirrostratus and scud. After that time it became cloudless, and continued so until midnight. Snow fell at 10h. 30m. a.m. and 3h. p.m. A brilliant meteor was seen at 11h. 2m. p.m. passing from about 20° Z.D. between the moon and a hydræ, and disappearing at 70° Z.D.
TUES.	Positive and weak in the morning. Positive and active in the afternoon and evening.	The sky was principally covered with cirrostratus, scud, and fleecy clouds. " "	In the early part of the morning the sky was mostly covered with cirrostratus and light scud. From 11h. a.m. to 3h. p.m., cumuli, cirrostrati, and fleecy clouds were prevalent; snow was also occasionally falling between these times. From 5h. p.m. until midnight the sky was one-half covered with cloud. The moon was frequently surrounded by corona in the evening.
WED.	Positive and moderately active throughout the day.	Generally cloudless in the early part of the morning; at other times the sky was covered with cirrostratus and scud.	The sky became cloudless before 1h. a.m., and remained so, with slight exception, until 10h. a.m. After that time, until 7h. p.m., cirri, cirrostrati, and fleecy clouds were distributed over the sky. From 7h. p.m. until midnight, the amount of cloud was variable. A fine corona was visible around the moon from 5h. 30m. p.m. to 9h. p.m.
THURS.	Positive and very active in the morning. Positive and moderately active during the remainder of the day.	A dense fog. Overcast. Cirrostratus.	Cloudless until 1h. a.m.; after that time a dense fog arose, and continued until 5h. p.m. At 9h. 30m. p.m. the sky, which had been overcast before, suddenly became clear, but only for a short time.
FRI.	Positive and moderately active throughout the day.	Nearly overcast throughout the day.	With the exception of a few breaks in the clouds at 3h. p.m. and 5h. p.m., the sky was overcast throughout the day. A slight fog prevailed in the evening.
SAT.	Positive and weak from 9h. a.m. until midnight.	With slight exceptions the sky was overcast throughout this period.	With the exception of a short time, from 5h. a.m. to 8h. a.m., and at 11h. a.m., the sky was covered with cirrostrati, fleecy clouds and scud, throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read. It was received from the instrument maker's on Tuesday morning, and it was started at noon on that day; the result, therefore, opposite Tuesday, corresponds to the motion of the air in the following 22 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park. Monday the 9th of February was the first day since January 12th on which the mean temperature of the day was below the average; and it is the first day since December 13th, 1845, on which it was so much as 7° below the average.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 33.3; and the mean reading at 7h. 30m. P.M., was 38.2; the mean readings at the Royal Observatory for the same times were 32.9 and 36.8 respectively.

† The mean direction of the wind for the week is W. With the exception of the first two days the air has been nearly in a calm state.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 7, (ending Saturday, Feb. 14th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry mark the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	duration	duration
In University College Hospital, son of an ornamental painter, 7, injury to the knee-joint, caused by falling into a brewer's sledge whilst in motion	*	Labourer, 17, accidental from inflammation caused by a sudden jerk whilst carrying a sack of potatoes on 24th December.	*
In University College Hospital, washerwoman, 62, mortal fractures of the skull from an accidental fall out of a hay loft	*	Stoker at the Independent Gas Works, Haggerstone, 41, accidental death from a blow on his belly, by the rebound of a coal-scoop, whilst in the act of charging a retort	*
In University College Hospital, wife of a labourer, 67, extravasation of blood on the brain, caused by an accidental fall down a flight of stairs	5 days	Son of a porter, 13, laceration of his liver and consequent inflammation caused by a blow on his left side (post mort.)	12 days
In London Hospital, labourer, 41, accidental from a dislocated spine, caused by a fall in a dock at Limehouse	4 days	How the blow was caused should have been stated.	
In London Hospital, bricklayer, 40, accidentally falling from a ladder, causing a fractured leg and dislocated ankle	*	M. 39, compound fractured leg	5 days
In London Hospital, lighterman, 48, accidental by a fall in the River Thames, and blow on the head and spine	2 hours	F. 69, fracture of the neck of the thigh, and constitutional shock (no inquest)	2 weeks
Carpenter, about 45, accidental death by a fall down stairs, and rupture of a vessel internally	*	M. 76, gangrene of right foot	2 weeks
Cellarman, 44, punctured pleura upon fractured ribs, by falling from a loft accidentally, accompanied by delirium	4 days	The cause of fracture should have been stated in the last three cases.	
In London Hospital, millwright, 54, accidentally run over by a waggon, causing fracture of his thigh, at Stepney	3 months	Wounds:—	
In London Hospital, porter, 38, accidentally run over by a cart, causing a fractured leg	3 weeks	Single woman, about 57, stabs in the left breast and arms—suicide	*
In London Hospital, weaver, 44, accidentally from a fractured spine by a fall from a cart at Wanstead	*	Drowning:—

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and weak throughout the day.	See General Remarks.	Cirrostratus and fleecy clouds during the morning; afternoon and evening completely overcast.
MON.	Positive and moderately active from 9h. a.m. until midnight.	} Overcast. Cirrostratus and scud. A light rain falling occasionally in the morning.	The clouds near the moon became broken shortly after midnight, but in ten minutes they had resumed their former density; at 6h. a.m. some extensive breaks in the N. and N.W. were visible, but they were of short continuance; at 1h. p.m. a thin rain fell, and continued falling at intervals during the afternoon and evening; at 8h. p.m. the rain had ceased, but the clouds continued unbroken. From 7h. p.m. to midnight the magnets were disturbed.
TUES.	Positive and weak from midnight to 3h. p.m. Positive and active from 5h. p.m. until midnight.	} Overcast. Foggy. } Cirrostratus and scud.	The sky was overcast throughout the day, with the exception of a few breaks, which occurred at about 4h. p.m. During the afternoon and evening the magnets were in a state of disturbance.
WED.	Positive and moderately active throughout the day.	} Overcast.	The sky was overcast throughout the day; at 2h. p.m. the clouds were less dense near the sun's place; a thin fog was prevalent during the morning; the evening was quite cloudy; shortly after 10h. p.m. a few drops of rain fell.
THURS.	Positive and active from midnight until 5h. a.m. Positive and moderately active from 9h. a.m. until midnight.	} See General Remarks.	The sky was overcast throughout the day; at 6h. p.m. a few small breaks were visible; the evening was also completely overcast. A few drops of rain fell shortly after 8h. p.m.
FRI.	Positive and moderately active throughout the day.	} Generally overcast.	The sky was covered with dense cirrostratus throughout the morning and evening, excepting at about 8h. 20m. p.m., when the sky became clear in several directions; at 9h. p.m. it had resumed its former appearance, being densely overcast, and it continued so throughout the night.
SAT.	Positive and weak from midnight to 5h. a.m.	} Overcast to 10h. a.m.; afterwards generally cloudless.	The sky continued overcast until after 8h. a.m.; at 10h. a.m. a few breaks occurred in the clouds, and shortly afterwards the sky was nearly free from cloud. It continued in this state till 2h. p.m. but before 5h. p.m. it again became overcast, and remained so until midnight.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 42.5; and the mean reading at 7h. 30m. P.M., was 46.6; the mean readings at the Royal Observatory for the same times were 41.5 and 44.8 respectively.

\* The air has been nearly in a calm state during the week.

# A TABLE OF Births and Deaths registered in the Metropolis,

During the Week ending Saturday, February 28th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 9.]

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 8, (ending Saturday, Feb. 21st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

CORONERS' RETURNS OF DEATHS BY VIOLENCE.											
NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."											
<i>Fractures and Contusions:—</i>			<i>Drowning:—</i>			<i>Hanging and Suffocation:—</i>			<i>Burns and Scalds:—</i>		
Seaman 29, rupture of blood vessels in his brain, caused by a fall whilst fighting with another man, (post mort.) .....	duration		Sea-boy, 13, found dead in the River Thames, apparently drowned.	duration		Baker, 48, banging himself in temporary insanity.	duration		In Guy's Hospital, son of a labourer, 5, burnt by his clothes taking fire from a hot poker, at Long-walk, Bermondsey .....	duration	
M. 61, injury of the head after an accidental fall in the street, from stepping on a cabbage leaf .....	instant		F. 49, strangulation with a cord fastened to a hook to a door in her lodging-room—found dead with feet on the ground—suicide—temporary insanity.	12 hours		F. 46, hanged herself in an unsound state of mind.	5 hours		In Guy's Hospital, son of a labourer, 4, burnt by his clothes taking fire, at Griffiths' Rents, Horselydown—cause unknown .....	5 hours	
Sou of a clockmaker, 17 weeks, fracture of the skull, caused by having accidentally fallen on a fragment of a broken jug .....	4 days		M. 42, found dead, apparently suffocated, without marks of violence.	14 hours		F. 83, found dead, apparently suffocated.	14 hours		In Guy's Hospital, son of a cheesemonger, 2, burnt by his clothes taking fire at Nag's Head-court, Gracechurch-street, cause unknown .....	12 hours	
In Bartholomew's Hospital, tobacco-pipe-maker, 70, shock to the nervous system, by fracture of his right leg by being run over by a cabriolet in Hoxton (post mort.) .....	6 days		F. 46, hanged herself in an unsound state of mind.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		In Guy's Hospital, daughter of a tanner, 7, burnt by her pinafore taking fire, as she was reaching a match off the mantelpiece, at Long-lane, Bermondsey .....	8 days	
In Guy's Hospital, son of a Commander, R.N., deceased, 16, injury to the abdomen from being run over by a cart, as he was endeavouring to stop the horse which had run away in the Borough Road .....	4 hour		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		Son of a horsekeeper, 3, mortal wounds from an accidental burn .....	14 hours	
In Bartholomew's Hospital, labourer, 56, fracture of his skull by a cannon falling on him through a flap in the stage of the City of London Theatre, Norton Folgate .....	instant		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		Son of a paper-hanger, 8 months, mortal injuries to divers parts of his body by an accidental burn .....	5 hours	
In Dreadnought Hospital, M. 30, injury to the leg at sea, followed by diffuse cellular inflammation .....	38 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		Son of a cabinet-maker, 2, scalds by drinking hot water from a kettle .....	16 hours	
M. 42, injury of the spine (no inquest) .....	probably 1 week		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		In Guy's Hospital, daughter of a tanner, 3, scalded by drinking boiling water from the spout of a kettle, at Victoria-place, Bermondsey .....	5 days	
(This Return is obviously defective.)	38 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		F. 11 months, scald of the head and side—was let fall by a little boy against a pot of coffee .....	2 days	
<i>Wounds:—</i>	38 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		M. 4, accidental death from scalds caused by drinking hot water from a kettle .....	5 days	
In Guy's Hospital, M., servant, 54, cutting his throat with a knife at Clapham, in temporary insanity .....	4 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		M. 2, scalded by a kettle of coffee falling from the fire on his face .....	5 days	
	4 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		Means not stated:—		
	4 days		F. 83, found dead, apparently suffocated.	16 hours		F. 83, found dead, apparently suffocated.	16 hours		M. newly born, wilfully murdered by some person or persons unknown.		

CORONERS' RETURNS OF DEATHS BY DISEASE (ADDITIONAL TO THOSE IN HOSPITALS), IN WHICH THE CAUSES ARE ASSIGNED.											
M. 39, { asthma .....	9 years		F. 44, extravasation of 5 oz. of blood at the back of the brain, while intoxicated, and in a passion .....	instant		M. 30, natural death—rupture of a blood vessel in the head .....	5 years		M. 70, natural death—diseased heart .....	5 years	
M. 7, { natural—found dead in bed—no medical attendance .....	3 months		F. 39, disease of lungs—pulmonary consumption .....	5 years		M. 4 mon., natural death—fits .....	5 years		M. 4 mon., natural death—fits .....	5 years	
M. 7, { debility from consumption and hooping cough .....	3 months		F. 36, natural—sanguineous apoplexy—found senseless in the street an hour before .....	5 years		M. 6 days, natural death from convulsions .....	5 years		M. 6 days, natural death from convulsions .....	5 years	
M. about 37, natural causes—fainting—disease of the heart (post mort.) .....	5 years		F. 52, found dead—epileptic fit .....	5 years		F. 1. natural death—epileptic fit—teething .....	5 years		F. 68, natural death—probably diseased lungs and heart .....	5 years	
M. 5 mon., natural causes—supposed from convulsions .....	suddenly										

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.											
M. 37, natural death by the visitation of God .....	duration		F. 65, found dead, without marks of violence .....	duration		F. 63, found dead in bed, without marks of violence .....	duration		F. 56, natural death—decline .....	duration	
M. 45, natural—fell down suddenly in a yard, and died in .....	2 hours		M. 43, natural—suddenly seized with pain in the chest, and died in .....	4 hour		M. 4 mon., found dead without marks .....	duration		M. 17, natural death from exhaustion .....	duration	
F. 4 mon., natural .....	no previous illness		M. 8 weeks, natural—slight difficulty of breathing lately .....	no previous illness		M. stillborn (post mort.) .....	duration				
F. newly born, whether born alive or not, not proved .....	duration										

THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.											
<i>St. George's H.:—</i>			<i>Charing Cross H.:—</i>			<i>University College H.:—</i>			<i>Middlesex H.:—No deaths.</i>		
M. 28, pulmonary consumption .....	duration		M. 54, delirium—metastasis of rheumatism to the brain .....	10 days		M. 39, { phthisis .....	2 years				
M. 32, pulmonary consumption .....	2 years		F. 35, { malignant disease of the liver .....	12 years		M. 56, Bright's disease—disease of heart and lungs .....	7 weeks				
<i>Westminster H.:—</i>						M. 58, bronchitis—pneumonia .....	duration could not be ascertained				
F. 36, { disease of the heart, liver, and kidneys .....	duration					M. 48, { morbus cordis—bronchitis .....	11 weeks				
	duration					M. 48, { aortitis .....	duration not clear				
	duration					F. 49, { cancer of liver—chronic peritonitis .....	duration				
	duration

DAY.	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing shown until after 9h. a.m. Between 9h. 40m. a.m. and 4h. p.m. positive and very weak. Nothing shown after 4h. p.m.	Overcast. Cirrostratus and scud. Rain was falling at intervals from 4h. p.m. to 10h. p.m.	Overcast throughout the day. Rain was falling frequently from 4h. p.m. to 10h. p.m. The wind blew in frequent gusts to 3lbs. from 10h. a.m. until midnight.
MON.	None till after 8h. a.m. At 9h. a.m. a small quantity of positive electricity was shown, which continued small in amount till after 3h., at which time it increased, and was at its maximum at midnight.	Overcast. Generally overcast until after 7h. p.m. At 10h. p.m. the sky became suddenly cloudless for a short time. Flashes of lightning were seen in the N. and N.W. from 9h. 20m. to 10h. at intervals of 2m.	Overcast until after 7h. p.m.; shortly after this time the clouds became broken, and from 10h. p.m. to midnight their amount was small. At 11h. 30m. p.m. the wind blew in gusts to 2lbs. Rain was falling frequently in the morning.
TUES.	Positive and strong till after 8h. a.m. Negative and active about 9h. 30m. a.m. From 11h. a.m. till midnight positive; the maxima occurred at 5h. a.m., and at 5h. p.m.	The sky was one-half covered with cirrostratus and scud till after 5h. a.m. Rain was falling at 7h. a.m. A thick drizzling rain falling. Generally overcast with slight rain at times till 3h. p.m. From 5h. p.m. to 9h. p.m. the sky was one-half covered with cloud. Shortly after 9h. p.m. it became overcast.	The sky was one-half covered with cloud till after 5h. a.m.; before 7h. a.m. the sky became overcast, and remained so until after 3h. p.m. Rain was falling frequently between those times. From 5h. p.m. until 9h. p.m. the sky was one-half covered with cirrostratus and scud. It became overcast shortly after the latter time, and remained so until midnight.
WED.	None till after 6h. a.m. Between 9h. a.m. and 3h. p.m. positive and weak; after 3h. increased in tension, and arrived at its maximum at 7h. p.m., and then gradually declined till midnight.	See General Remarks. Overcast till after 3h. p.m. A thin rain was falling at 9h. 30m. a.m. From 5h. p.m. to 8h. p.m. the amount of cloud was small. After that time it became nearly overcast, and continued so with little exception till midnight.	Overcast until after 3h. p.m., with slight rain in the morning. In the evening the amount of cloud was very variable. At 11h. p.m. a faint auroral light was seen, and the magnets were disturbed.
THURS.	None till after 6h. a.m. Before 7h. a.m. positive, and increasing in tension till 9h. 30m. a.m., at which time the maximum occurred; after this time the tension decreased to zero at 3h. p.m., and after that time it was positive and variable in amount.	See General Remarks. Nearly overcast at 7h. a.m. From 9h. a.m. to 3h. p.m. the sky was one-third covered with cirri and fleecy clouds. At 4h. p.m. clouds began to collect, and from that time until midnight three-fourths of the sky were covered with cirrostratus and fleecy clouds. At 6h. 20m. p.m. a shower of rain fell.	The aurora continued visible until 2h. a.m., and the disturbance of the magnets ceased shortly after that time. From midnight to 3h. p.m. the sky was one-half covered with cloud. In the afternoon and evening a large amount of cloud prevailed.
FRI.	Positive and active till 11h. a.m. Negative and strong till 9h. 4tm. p.m. From 9h. 42m. 30s. p.m. the electricity was positive, and continued increasing in tension till midnight, at which time the maximum took place.	The amount of cloud was generally small till 6h. a.m. Before 7h. a.m. the clouds rapidly collected, and the sky shortly afterwards became overcast. Rain falling; the tension was the largest at times when the rain was falling most quickly. Overcast till after 5h. 20m. p.m. Rain was falling occasionally between 11h. a.m., and 1h. 30m. p.m., and afterwards at 3h. 10m. p.m. At 7h. 10m. p.m. the sky became suddenly clear for a short time. From 9h. till midnight the amount of cloud was variable; but generally overcast.	Nearly cloudless until after 6h. 30m. a.m.; shortly after this time clouds collected, and the sky became overcast. It remained so until 5h. p.m. Rain was falling heavily between 11h. a.m. and 1h. 30m. p.m., and also at 5h. p.m. From 5h. p.m. until 10h. p.m. the amount of cloud was exceedingly variable. Shortly after 10h. p.m. the sky became overcast.
SAT.	The positive electricity continued strong till after 3h. 30m. a.m.; after this time the tension declined to zero at 6h. a.m., and continued at about this till 9h. 30m.; after this time it increased rapidly, and continued nearly uniformly strong till after 9h. 30m., at which time it began to be less; the maximum occurred at 7h. 30m. p.m.	Generally overcast until 1h. 30m. a.m.; after this time the clouds became broken, and from 2h. a.m. to 6h. a.m. the sky was cloudless. Clouds began to collect at 7h. a.m., but they dispersed shortly afterwards. From 9h. a.m. to noon only a small amount of cloud prevailed. From noon to midnight the amount of cloud was variable.	The sky remained overcast until 1h. 30m. a.m.; from this time until 6h. a.m. the sky was cloudless. At 7h. a.m. clouds collected, but dispersed in less than an hour. From 8h. a.m. to 11h. a.m. the amount of cloud was small. Shortly after the latter time the sky became one-half covered with cloud, which gradually increased to 3h. p.m., when it became overcast, and remained so till 10h. p.m. Before midnight the sky was overcast. The temperature has been exceedingly high throughout the week, the mean being nearly 12° above the average for 25 years.

The height of the eistem of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 10th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 49.8; and the mean reading at 7h. 30m. p.m., was 53.3; the mean readings at the Royal Observatory for the same times were 48.7 and 51.5 respectively.

The mean direction of the wind for the week is S.S.W.

## A TABLE OF

Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, March 7th, 1846.*

ANNUAL SERIES VII.]		PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.										[No. 10.]

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 9, (ending Saturday, Feb. 28th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Suffocation (continued):—	duration
In King's College Hospital, labourer, about 57, fracture of the base of the skull by falling from a pile of timber, when at work in a timber yard ( <i>post mort.</i> )	2 days	In Charing Cross Hospital, F. 50, delirium tremens, succeeding fracture of leg into ankle joint.	*	Daughter of a butcher, 6 weeks, found dead—apparently suffocated.	
F. 75, { injury from a fall	several years	(How the fracture was caused should have been stated)		Burns and Scalds:—	
F. 75, { paralysis ( <i>no inquest</i> )	2 days	Wounds:—		Son of a labourer, 5, mortal burns and wounds received on his body, but how unknown.	
M. 23, accidental death from being crushed between a cart and a dray—a deadend of £2 on the cart and £2 on the dray.		In King's College Hospital, brass-founder, 46, pistol shot wound, ball entered the lobe of the left ear, and perforated and lodged in the brain—wilful murder ( <i>post mort.</i> )	9 hours	Wife of a barge-boy, 42, burns received by her clothes accidentally taking fire. 11 days, 9 hours	
Labourer 30, injuries to the chest from being run over by his master's cart, by accidentally slipping down in Fleet-street; died almost instantly		Drowning:—		Daughter of a labourer, 1, scalds by hot broth falling on her person accidentally	47 hours
In { injury to left foot	5 weeks	M. 33, found drowned, without marks of violence—supposed to have fallen from a barge on the 31st of January last.		{ scald caused by overturning a basin of	
Dreadnought { gangrene of foot and leg, and		Ballast-getter, 30, accidentally drowned by falling from a ballast-lighter from stroke of a sail	how long under water not stated	F. 1, { hot milk	*
Hospital, { inflammation of the base of left	20 days	M. (age and condition unknown), found dead—apparently drowned.		{ inflammation ( <i>no inquest</i> )	7 days
M. 40, { lung ( <i>post mort.</i> , <i>no inquest</i> )	*	Suffocation:—		Son of a painter, 1, erysipelas and fever following burn of the right leg, caused by boiling coffee—the coffee pot having fallen from the fire	2 days
(how the injury was caused should have been stated)		Daughter of a printer, 2 mon., accidentally suffocated in bed	instant	Poison:—	
M. 76, compound fracture of leg ( <i>no inquest</i> )	2 months			F. 19, snidee by taking laudanum, being in a temporary state of insanity	*
(how the fracture was caused should have been stated)					

### CORONERS' RETURNS OF DEATHS BY DISEASE (ADDITIONAL TO THOSE IN HOSPITALS), IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 41, bursting of a bloodvessel in the lungs, about fifteen minutes.	*	F. 60, hæmorrhage into the pericardium, supposed from rupture of an aneurism of the aorta	instant	F. 34, natural death—apoplexy	*
F. 5 mo., natural death—convulsions	*	F. 54, suffocation from pressure of a tumour on the right side of the neck against the wind-pipe, combined with hypertrophy of the ventricles of the heart—found dead ( <i>p.m.</i> )		Daughter of a single woman, 11 weeks, debility and decay, arising from want of sufficient nourishment, by reason of the inability of her mother to procure food.	*
F. 48, apoplexy	*	M. (age not known) apoplexy; blood at the base of the brain ( <i>post mort.</i> )	instant	F. 75, enlargement of the heart, with ossification of the aorta ( <i>post mort.</i> )	*
M. 27, visitation of God—supposed from rupture of a bloodvessel	10 minutes	M. 65, disease of the heart—died in the street, instant		M. 10, natural death from disease of the heart, instant	*
F. new born, congestion of the brain—no evidence how caused ( <i>post mort.</i> )	*	F. 3 mo., convulsions	6 hours	F. 55, natural death from serous apoplexy	1½ hour
M. 6 mo., natural death—convulsions	*			F. 75, natural death by a fit of apoplexy from age and decay	4 hours
F. 16, natural—pulmonary apoplexy and effusion of serum into the ventricles of the brain	24 hours				

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 35, found dead, without marks of violence.		M. 12 weeks, not ascertained whether suffocated accidentally under bed clothes, or died naturally	no previous illness	M. just born, unknown—navel-string not secured—probably born several months ago, ( <i>post mort.</i> )	
F. 3 mon., found dead.				F. stillborn, found dead in the Thames ( <i>p.m.</i> )	
F. stillborn ( <i>post mort.</i> )					

### THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

St. George's II.:—	duration	Charing Cross II.:—	duration	University College II.:—	duration
M. 33, pulmonary consumption	8 months	M. 26, phthisis—cavities in both lungs ( <i>p.m.</i> )	*	M. 57, { morbus cordis	1 year
M. 12, effusion on the brain	*	M. 57, some internal disease, apparently of the abdomen, but no <i>post mort.</i> examination having been allowed, no specific disease can be recorded	*	{ bronchitis	2 months
M. 50, encysted disease of cardiac end of stomach and liver—red hepatization of lung—dilated and flaccid heart ( <i>post mort.</i> )	*	Middlesex II.:—		{ anasarca—albuminuria	*
Westminster II.:—		M. 46, { malignant fungus of thigh	2 years	{ morbus cordis	*
M. 41, { continued fever	12 days	{ tetanus ( <i>post mort.</i> )	2 days	{ albuminuria	*
{ gastric enteritis	4 days	M. 40, { diseased liver	*	{ serous effusion within the skull	*
F. 27, gastro-intestinal fever ( <i>post mort.</i> )	10 days	{ anasarca	6 weeks	{ ovarian dropsy	*
M. 45, { affection of the heart	1 year	F. 77, cancer mammae	4 years	{ ascites	2 years
{ cerebral hæmorrhage	4 weeks	(And one death not yet returned.)		{ peritonitis after paracentesis	3 days
				Fever II.:—No deaths registered.	
				Small Pox II.:—No Deaths registered.	

THIRTEEN HOSPITALS.—CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS (continued).—

King's College H.:		duration	St. Thomas' H.:		duration	Dreadnought H.:		duration	St. Thomas' H.:		duration
M. 23, erysipelas, followed by secondary abscesses		*	M. 41, aneurism of aorta		*	M. 27, phthisis		*	M. 27, syphilitic ulceration of pharynx		5 months
F. 13, inflammation of the pleura and right lung—pericarditis (post mort., inquest), duration not known			M. 37, bronchitis—dropsy		*	M. 31, phthisis		*	M. 19, inflammation of lungs		14 days
Bartholomew's H.:—No deaths registered.									M. 19, consolidation and incipient gangrene of both lungs—syphilitic caries of cervical vertebrae (post mort.)		*
London H.:									M. 19, cough, &c.		10 weeks
F. 61, hæmaturia		13 months							M. 19, scurvy		4 weeks
F. 62, umbilical hernia (post mort.)		5 days							M. 19, tubercular infiltration of right lung (post mort.)		*
Guy's H.:									M. 20, fever, vomiting		20 days
M. 30, nephritis		*							M. 20, cœna		5 days
M. 46, diseased heart—bronchitis		*							M. 20, copious effusion in the ventricles of the brain with softening of their walls—lymph thrown out at the base (post mort.)		*
M. 28, diseased heart—dropsy		*									
M. 47, diseased heart—dropsy		*									

DISTRICTS OF STEPNEY, POPLAR, ST. SAVIOUR, ST. OLAVE, AND BERMONDSEY:—  
CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

Limehouse:—		duration	Mile End Old Town (lower):—		duration	Christchurch (continued):—		duration
M. 22, { serofula		7 years	M. 23, phthisis		12 months	M. 65, natural decay		*
M. 7 mon, { phthisis		2 years	M. 20, internal abscess—marasmus		*	M. 9 mon, hydrocephalus		4 days
M. 38, { disease of the digestive organs		3 weeks	M. 39, cœna tonsillar		5 days	M. 40, { affection of the lungs		*
M. 41, { diseased brain		3 weeks	F. 14, { hydrocephalus		12 hours	M. 46, delirium tremens		2 weeks
M. 1, { phthisis		*	F. 62, sloughing sores on the back, produced by long lying in bed—the consequence of paralysis		*	F. 2, { hooping cough		4 months
M. 1, { hydrocephalus		*	F. 39, { chronic inflammation of mucous membrane of stomach		4 years	F. 2, { pneumonia		4 days
F. 21, inflammation of the liver (not certified)		*	F. 39, { sanguineous effusion on the brain and heart (serous)		12 hours	F. 11 mon, convulsions from hooping cough		*
F. 52, asthma		*	F. 63, diseased stomach		*	F. 67, paralysis		many months
F. 1, pneumonia		2 months	F. 1, convulsions		1 day	St. Olave and St. Thomas:—		
F. 22, phthisis		6 months				M. 50, typhus fever		*
Ratcliffe:—			Poplar:—			M. 1, croup		2 days
M. 66, phthisis		4 months	M. 73, debility		*	M. 5 weeks, inflammation of the lungs		3 weeks
M. 3, { hydrocephalus		3 weeks	M. 4 days, debility		*	F. 1, pneumonia after measles (not certified, no medical attendant)		*
M. 3, { paralysis		4 days	M. 1, hydrocephalus		*	St. John:—		
M. 54, asthma		*	M. 33, peritonitis		6 weeks	M. under 1, { deputation		*
F. 47, laryngeal phthisis		9 months	F. 23, euteritis		24 hours	M. 1, pneumonia		2 weeks
F. 38, { bronchitis		18 days	F. 11 mon, { deputation		*	F. 75, senility		*
F. 38, { anasarca		14 days	F. 69, { asthma		5 weeks	F. 2, bronchitis		2 weeks
F. 1, { marasmus		6 months	F. 69, { fever		5 weeks	The Leather Market:—		
F. 1, { hooping cough		2 months				M. 9, { fever		3 weeks
Shadwell and Wapping:—			Bow and Bromley:—			M. 48, { purpura		24 hours
M. 46, { old umbilical hernia—operation		12 days	M. 22, consumption (not certified)		*	M. 48, { remittent fever		1 week
M. 45, { peritonitis (post mort.)		*	M. 44, phthisis		*	M. 4, { congestion of the lungs		*
F. 18, bronchitis, with effusion into the chest		*	M. 3, { hooping cough		4 months	M. 4, { congestive liver		9 days
F. 27, phthisis		3 months	M. 3, { a fit		8 hours	M. 4, { convulsions		*
F. 34, phthisis		2 years	M. 1, pneumonia		1 week	F. 7 mo, { pertussis		3 weeks
F. 10 mon, { muco-enteritis		3 weeks	F. 31, ulceration of the bowels		5 weeks	F. 24, puerperal fever, with peritonitis		*
Mile End Old Town (upper):—			F. 5, { pertussis		11 weeks	F. 3 mo, marasmus		3 months
M. 44, { inflammation of lungs		8 months	F. 5, { bronchitis		3 weeks	F. 36, chronic hysteritis		*
M. 57, { phthisis pulmonalis		3 months	F. 5, { pneumonia		2 weeks	F. 2, pertussis		*
M. 57, { hæmoptysis		*	F. 76, natural decay (no medical attendant)		*	St. Mary Magdalen:—		
M. 1, { serofula		8 months	F. 16, consumption		1 year	M. 4, hooping cough (not certified)		*
M. 1, { disease of the mesenteric gland		6 months	F. 56, chronic meningitis—erysipelas		16 days	M. 64, morbus cordis		18 weeks
M. 1, { diarrhoea		6 months	F. 27, erysipelas		3 weeks	F. 37, erysipelas of the head		7 days
M. 1, { hooping cough		1 month	St. Saviour:—			F. 2, inflammation of lungs		5 days
M. 1, { inflammation of lungs		*	M. 56, asthma		3 years	St. James:—		
M. 70, natural decay (not certified, no medical attendant)		*	M. 34, syphilis, phthisis		*	M. 3 mon, convulsions		15 hours
M. 46, paralysis from softening of brain		*	F. 33 d, hooping cough (not certified, no medical attendant)		*	M. 1, hooping cough		*
M. 2, atrophy—result of hooping cough		*	F. 58, typhus fever		14 days	M. 3 weeks, marasmus		2 weeks
F. 62, diseased heart—bronchitis		*	F. 41, puerperal convulsions—childbirth		*	M. 1, hooping cough (no medical attendant)		6 weeks
F. 1, marasmus		6 months	Christchurch:—			F. 57, apoplexy		3 days
F. 3 mon, hooping cough (not certified, no medical attendant)		*	M. 2, { variola		10 days	F. 74, { apoplexy		2 weeks
F. 37, { influenza		4 days	M. 34, phthisis		3 weeks	F. 74, { paralysis		4 days
F. 11 weeks, marasmus		11 weeks				F. 1, hydrocephalus		8 days

DEATHS BY SMALL POX, FEVER, SYPHILIS, MALFORMATION, HERNIA, CHILDBIRTH, DELIRIUM TREMENS, AND INTemperance.

Small Pox:—		duration	Fever (continued):—		duration	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.		duration
M. 7, variola (not stated whether vaccinated)		*	F. 33, fever		14 days	F. 39, { extreme exhaustion, after delivery of her thirteen child		5 days
M. 1, small pox, without previous vaccination		12 days	M. 13, typhus fever		11 days	F. 26, puerperal fever		*
F. 5, variola (1st attack—never vaccinated)		9 days	M. 17, { acute rheumatism		10 days	F. 27, { premature parturition of twins—flood		*
See above.			M. 17, { typhoid fever		*	F. 23, inflammation of the uterus after delivery		2 hours
Fever:—			M. 3, { hooping cough		7 weeks	F. 32, { delivery		8 days
F. 5, typhus		4 weeks	F. 62, nervous fever		7 days	F. 30, milk fever		10 days
M. 7, { fever		7 days	F. 1, { ulcerated throat		7 days	F. 34, { gangrenous erysipelas		12 days
M. 7, { diseased lungs		*	F. 4, { typhus		7 weeks	F. 23, natural death from puerperal peritonitis		3 days
F. 61, fever		6 days	F. 4, { irritative fever		7 weeks	F. 32, puerperal fever		10 days
F. 63, fever		*	M. under 1, { intermittent fever		4 weeks	See above.		
M. 62, { epilepsy		*	M. 7, remittent fever		20 days	Delirium tremens and Intemperance:—		
M. 62, { bronchitis		*				M. 37, { delirium tremens		*
M. 22, typhus—malignant		*	Syphilis:—			M. 43, { atrophy		3 months
M. 70, typhus		16 days	F. 46, secondary syphilis		*	M. 51, { bronchitis		8 weeks
M. 46, fever		3 weeks	F. 33, { syphilis		years	M. 51, { delirium tremens		2 weeks
F. 2, typhus fever		7 days	F. 33, { consumption		1 year	M. 48, { phthisis pulmonalis		*
F. 34, typhus fever		4 weeks	See above.			M. 48, { delirium tremens		*
M. 33, synochus, ending in effusion of the brain		30 days	Malformation:—			assigned in abstract to phthisis.		
F. 28, typhus fever		*	M. 6 mo, exhaustion from having a cleft palate		*	(See above.)		
F. 5, typhus fever		3 weeks	Hernia:—			M. 39, general breaking up from intemperance.		
F. 5, { typhus		12 days	M. 55, strangulated hernia (post mort.)		3 days			
F. 5, { convulsions		3 days	See above.					
F. 1, { low fever		2 days						
F. 1, { convulsions		12 hours						
F. 47, fever		*						
F. 60, { enlargement of the liver		some months						
F. 60, { low fever of typhoid character		3 weeks

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive with tension of moderate strength all the day.	See General Remarks.	The sky was overcast till 1h. p.m., when the clouds became broken in several directions, and continued so throughout the afternoon. At 5h. p.m. cirrostratus and dark masses of scud came up from every direction; at 10h. p.m. a few breaks were visible in the Zenith, and the clouds continued broken till midnight.
MON.	Positive and weak till 4h. a.m. None between 4h. a.m. and 8h. a.m. At 9h. a.m. a small quantity of positive electricity was shewn, which continued small in amount till midnight. The maximum tension was at 9h. a.m.	Overcast; a slight rain at 3h. a.m. Overcast; occasional light rain. See General Remarks.	The sky became overcast soon after midnight, with a slight rain falling at intervals; this continued till 9h. a.m., when the clouds became broken in every direction, and soon after disappeared, and with the exception of a few light cirri, the sky remained clear till noon, when the quantity of cloud began to increase: the sky was overcast till 6h. p.m., when it became suddenly clear, and continued so until 6h. 3m. p.m., when it was covered, and rain commenced falling, and continued till 7h. p.m.; at 8h. p.m. the clouds entirely disappeared, and the sky remained clear during the night.
TUES.	Positive and weak between 9h. a.m. and 4h. p.m.; none was shewn at any other time during the day.	See General Remarks.	At 2h. a.m. clouds began to gather in the west, and gradually spread themselves over the sky; with the exception of a few small breaks, the sky continued overcast with a thin cirrostratus cloud till midnight: the moon was frequently visible: the wind was blowing in gusts to about 2, and 2½, throughout the afternoon and evening.
WED.	A small quantity of positive electricity was shewn till after 7h. a.m.; And again, between 3h. and 7h. p.m. None was shewn at any other part of the day.	Overcast. Overcast. Cirrostratus. See General Remarks.	The sky continued cloudy from midnight till 8h. a.m., when heavy squalls of wind and rain occurred; these were of short duration; the rain, however, continued falling in slight showers at intervals till noon, when it ceased, and the wind, which had been blowing in strong gusts became lulled; the afternoon continued cloudy, but the sun was occasionally visible, the prevailing cloud being a thin cirrostratus: the appearance of the sky during the evening was alternately clear and cloudy; a lunar halo was visible during the evening.
THURS.	None till after 5h. a.m. Between 9h. a.m. and 1h. 50m. p.m. the electricity was very abundant, being negative till 10h. 14m. a.m., and alternately positive and negative till 6h. 40m.; after this time it was positive; the tension was very great indeed. Sparks were abundant, some of them being nearly 0.2 inches in length: there was no galvanic current. During the remainder of the day there was weak positive electricity.	Overcast till 4h.; broken clouds afterwards. A heavy rain falling till 10h. 10m. a.m. A slight rain till 10h. 14m.; overcast after- wards. See General Remarks.	Overcast with slight rain till 8h. a.m. Heavy rain was falling from 9h. to 10h. 15m. a.m.; the sky was cloudy till noon: in the afternoon the sky was alternately clear and cloudy; throughout the evening a thin cirrostratus cloud prevailed and continued till midnight.
FRI.	Rather strong negative electricity till after 2h. a.m. None between 3h. a.m. and 7h. a.m. And after the latter time, weak and positive till midnight.	Rain falling. Overcast; a slight rain at times. See General Remarks.	The sky was overcast till 4h. a.m., with slight rain occasionally falling; after which time it became suddenly clear; this was but of short duration, for in half an hour afterwards the sky had again become overcast, and continued so till 1h. p.m.; during the afternoon the sky was partially clear, and remained so till 6h. p.m., when a thin cirrostratus cloud came up from the west and prevailed till midnight. A lunar halo and coronae were observed during the evening.
SAT.	A very little positive electricity shewn till afternoon. From 1h. p.m. to midnight positive, with strong tension. The maximum at mid- night.	See General Remarks.	Cirrostratus and scud prevailed from 1h. a.m. till noon; after this time, with the exception of some light cirri the sky was cloudless, and remained so until midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Saunders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 49.0; and the mean reading at 7h. 30m. P.M., was 48.2; the mean readings at the Royal Observatory for the same times were 46.9 and 45.4 respectively.

\* The mean direction of the wind for the week is S.W.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, March 14th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 11.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.		Causes of Death.	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 10,  
(ending Saturday, March 7th.)

CORONERS' RETURNS OF DEATHS BY VIOLENCE.

Fractures and Contusions:—	duration	Drowning:—	duration	Hanging and Suffocation (continued):—	duration
M. 69 (out of business), effects of fracture of the left leg, by being run over by a cart, as he was stepping off the kerb in Windmill-street, Finsbury ( <i>post mort.</i> )	6 days	F. 64, found drowned—no marks of violence.		F. 38, hanged herself in a temporary state of insanity.	
M. 18, accidentally crushed between a barge and a pier—a deadload of £5 on the barge "Betsy"	*	Farrier, 38, found dead in the Regent's Canal—apparently drowned, without marks of violence.		Daughter of a single woman, 3 mon., natural death, accelerated by suffocation from the bed clothes.	
Labourer, { injured spine ..... *	*	M. 18, found dead, without marks—apparently drowned.		<i>Scalds:—</i>	
40, { causing effusion and paralysis .. *	*	M. supposed from 55 to 60 (unknown), found drowned in the River Thames, without marks of violence—by what means no proof.		Son of a carpenter, 2, inflammation of the lungs from being accidentally scalded by the upsetting of a pot of boiling water from the fire .....	*
(how the injury was produced unknown)		M. about 30 (unknown), found drowned in the River Thames, without marks of violence—by what means no proof.		Son of a spinster, 1, scalded by the accidental upsetting of an iron pot, containing hot broth, at Peter's street, Cow Cross .....	34 hours
<i>Wounds:—</i>		M. apparently a bargeman (name unknown), found dead in the waters of the Thames, off Woolwich—no evidence of death.		<i>Poison:—</i>	
Marble paper maker, 37, peritonitis, brought on by a wound in his left side, and effusion of blood in the abdomen, from being stabbed with a knife at Cradle Court, Cripplegate, ( <i>post mort.</i> )	4 days	<i>Hanging and Suffocation:—</i>		M. 2, accidental taking of essence of peach ..	1 hour
F., servant, 18, cutting her throat with a knife, in temporary insanity .....	instantly	Pensioner, formerly grocer, 82, suicide by hanging—of unsound mind.		<i>Other causes:—</i>	
		Porter at a coal warehouse, 44, hanged himself in a privy being at the time of unsound mind.		sea sickness .....	7 days
				M. about 68, { exhaustion, followed by effusion on the brain ( <i>no inquest</i> ) ..	3 days

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

THIRTEEN HOSPITALS.—CAUSES OF DEATH, AS RETURNED BY THE MEDICAL OFFICERS (continued).—

Bartholomew's H. :—	duration	London H. (continued) :—	duration	St. Thomas' H. :—	duration
M. 52, disease of the liver .....	*	M. 36, pneumonia .....	6 weeks	M. 56, pneumonia .....	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive at every examination throughout the day.	} See General Remarks.	Detached cumuli and scud prevailed in all directions until noon, when the sky became covered with thin cirrostratus cloud, and continued so till midnight. During the evening the moon was occasionally surrounded by a halo, but it was too faint for measurement.
MON.	Positive all day, the tension increasing till 9h. a.m.; a slight decrease till 11h. p.m. Between 11h. p.m. and 4h. p.m. a great decrease of tension; and between 5h. and 7h. p.m. a great increase took place, and after 10h. it decreased. A max. oc- curred at 9h. a.m., and at 9h. p.m., and both were of equal tension.	} See General Remarks.	The sky became clear, with the exception of some fleecy clouds towards the west, at 2h. a.m., and remained so till noon; at 1h. p.m. cirrostratus clouds came up from the west, and covered the sky till 6h. p.m., when they became less dense, cleared in the zenith, and cirrostratus around the horizon only prevailing until 9h. p.m., when the sky became covered. A fog of variable density prevailed from 6h. a.m. till noon.
TUES.	With the exception of 5h. a.m. and 1h. and 3h. p.m. positive all day—the tension very variable. Max. at 8h. a.m. and at 5h. p.m.	} See General Remarks.	Cirrostratus, scud, and fleecy clouds prevailed till 7h. a.m., when the sky became clear, and remained so till 1h. p.m. A thin film of cirrostratus then covered the sky until 3h. p.m. when, with the exception of a slight haze in the horizon, the sky was clear. Some lines of thin cirri were spread over the whole sky from 9h. p.m. till midnight. A lunar halo was visible of 23° radius at 11h. 30m. p.m.
WED.	Positive all day, being weak till after 4h. p.m. At 5h. the tension was strong, and the max. occurred at 9h. p.m.	} See General Remarks.	Large quantities of cirrostratus cloud began to gather in the east at 2h. a.m.; and at 3h. 30m. the sky was covered, and continued so till 6h. p.m. when the zenith, and some distance around it, became clear; at 6h. p.m. the amount of cloud had become considerably lessened, and at 9h. 20m. the sky was cloudless, and remained so till midnight. A glory was observed frequently around the moon during the evening.
THURS.	Positive all day. The first maximum tension at 9h. a.m.; the second at 5h. p.m.	} See General Remarks.	With the exception of some fleecy clouds and light cirri, the sky was cloudless till 3h. 30m. a.m., after which time it became overcast, and remained so throughout the day; at 9h. 30m. p.m. the clouds became suddenly broken, and at 10h. the sky was cloudless, and continued so till midnight. The reading of the barometer was remarkably high during the day; its max. was 30.592 in., and occurred at 11h. 30m. a.m.
FRI.	None till after 5h. p.m., and positive afterwards.	} See General Remarks.	The sky was cloudless till 9h. a.m., when cirrostratus and fleecy clouds of various densities covered it, and remained till 4h. 30m. p.m.; between this time and 5h. 30m. p.m. the clouds became broken, with occasional gleams of sunshine; soon after this time the sky became again covered, and remained so till midnight.
SAT.	Occasionally weak and positive, but ge- nerally none was shown. Neg. at 5h. a.m.	} See General Remarks. Rain falling.	The sky was overcast throughout the day. At 5h. a.m. rain commenced falling in large drops, and continued till 7h. a.m., when it ceased. The wind was blowing in gusts to about 1lb. pressure on the square foot, from 5h. a.m. till noon; afternoon there were gusts of from 4lbs. to 6lbs. pressing. the gale continuing till the evening; at midnight it was nearly calm.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Saunders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39.3; and the mean reading at 7h. 30m. P.M., was 47.6; the mean readings at the Royal Observatory for the same times were 38.7 and 45.5 respectively.

\* The mean direction of the wind for the week is S.W., but from the 9th to the 12th, the air was nearly always calm.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, March 21st, 1846.*

ANNUAL SERIES VI.]

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 11, (ending Saturday, March 14th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	None was shewn at any examination throughout the day.		The sky was covered with cirrostratus and sand during the whole of the day. Rain began to fall at 6h. 30m. a.m., and continued occasionally till noon. The wind was blowing in frequent gusts of 2lbs. and 3lbs. on the square foot from noon till midnight.
MON.	Positive and weak at 6h.; 6h.; 10h.; and 12h. p.m., and none at any other time.	} See General Remarks.	The clouds were a little broken about noon, and shortly before midnight; with these exceptions, the sky was overcast with cirrostratus and sand throughout the day. At 4h. 10m. p.m. rain, accom- panied with hail, began to fall; the former lasted till 5h. 30m. p.m., but the latter continued only for about 3 minutes. Rain was also falling during heavy squalls about 10h. p.m. An aurora was visible a little before midnight, and the magnets were disturbed. The wind was blowing in heavy gusts throughout the day, frequently to 3lbs. on the square foot; occasionally to 5 and 6lbs., and once at 2h. 30m. p.m. there was a gust of 11lb.; and other gusts of 8, 9, and 10lbs. pressure occurred about this time.
TUES.	Positive all day, and the tension strong. A max. at 9h. a.m., and the max. at 5h. p.m.	} See General Remarks.	The auroral light disappeared at 6h. 45m. a.m., but again became visible at 3h. 30m. a.m., and finally disappeared at 3h. 30m. a.m., during the whole of which time the magnets were disturbed. The clouds were very variable in amount until noon, and the sky was about one-half covered in the afternoon and evening, the character throughout the day being principally cirrostratus.
WED.	Positive all day, the tension strong. A max. occurred at 9h. a.m., and at 9h. p.m., and both were of equal tension.	} See General Remarks.	The sky was about one-half covered with cirrostratus until 7h. 30m. a.m., and was generally overcast during the rest of the day. The upper arc of a solar halo was visible from 4h. 45m. a.m. to 11h. 10m. a.m., whose radius was 23½°.
THURS.	Positive all day. The morning max. oc- curred between 8h. and 10h., and the evening max. between 7h. and 9h.	} See General Remarks.	The sky was generally covered with cirrostratus, fleecy clouds, and sand throughout the day. A thick mist prevailed during the latter part of the morning.
FRI.	Till 9h. 34m. a.m. nothing was shewn; at 9h. 34m. positive, and after this time positive, with strong tension all day. The max. occurred about noon.	} See General Remarks.	A few breaks occurred about noon, otherwise the sky was overcast during the day. Snow was falling in large flakes from about 2h. 30m. a.m. to 4h. a.m.
SAT.	Positive till 5h. a.m. Negative between 7h. p.m. and 7h. 30m. p.m., with strong tension: a galvanic cur- rent and sparks. Weak and positive afterwards till mid- night.	See General Remarks. } Rain falling. } See General Remarks.	The sky was about one-third covered with cloud until noon, when it became nearly overcast, and remained so with few exceptions throughout the day. Rain was falling occasionally during the afternoon and evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 33.9; and the mean reading at 7h. 30m. P.M., was 29.3; the mean readings at the Royal Observatory for the same times were 33.2 and 38.6 respectively.

† The mean direction of the wind for the week is S.W.; the air was nearly in a calm state from Tuesday to the end of the week.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, March 28th, 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 12, (ending Saturday, March 21st).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation:—
In St. George's Hospital, out-pensioner of Chelsea Hospital, 75, debility of age, accelerated by fracture of the left thigh, by falling down some steps at a public house, when intoxicated (post mort.).....	In University College Hospital, railway porter, 30, crushing between two railway trucks on March 2nd, while trying to keep one of them back.....	*	Prisoner in the House of Correction, professor of music, 53, strangulation with a handkerchief fastened to the handle of a water-closet door—legs on the ground.... about 5 minutes (suicide—insanity.)
In St. George's Hospital, out-pensioner of Chelsea Hospital, 68, erysipelas of head and face, following scalp wound, by falling against the kerb-stone, when walking in Ebury-street (post mort.).....	In St. George's Hospital, labourer, 51, gangrene following compound fracture of 1st, 3rd, 4th, and 5th toes of left foot. An iron engine-wheel fell upon his foot, when removing the wheel from a waggon at the Nine Elms Station of the South Western Railway Company, (post mort.).....	16 days	Brushmaker, 35, suicide by hanging himself with his neckerchief to the banisters of a stair—in a state of temporary insanity, resulting from excessive drinking and embarrassment in trade.
In St. George's Hospital, labourer, about 44, compound fracture of the right leg, by falling from a ladder when at work at a house, No. 57, Jermyn-street (post mort.).....	In University College Hospital, labourer, 30, fracture of the skull by a fall from an omnibus, from a strap breaking in fastening luggage.....	*	F. domestic servant, 19, suicide by hanging herself with a cord to a hook, being in a state of temporary insanity.
In St. George's Hospital, out-pensioner of Chelsea Hospital, 56, fracture of right clavicle and blade-bone, and six upper ribs, and from the effects of intoxication—fell down stairs when intoxicated (post mort.).....	In University College Hospital, son of a labourer, 7, lacerated wound over the knee-joint, caused by falling on a brewer's truck.....	9 days	Son of a drayman under 1, accidental suffocation—supposed to have been overlaid by his mother—found dead in bed.
In St. George's Hospital, plasterer, 53, inflammation following a scalp wound, supposed from a fall in the street when intoxicated, (post mort.).....	M. 2, { internal abdominal injury..... 3 days knocked down by a horse in a carriage (no inquest)..... 8 days		
In St. George's Hospital, potman, 50, mortification of the left leg, following fracture of the thigh—fell down a step ladder at the "Sussex Arms," Westbourne-street, when carrying pots (post mort.).....	In Guy's Hospital, wife of a labourer, 34, rupture of her bladder by a kick on her belly (post mort.).....	5 days	
In Guy's Hospital, excise officer, about 55, fracture of his left arm, from falling down near King William-street (post mort.).....	F. 2, { injury of the back..... 13 months pneumonia (no inquest)..... 3 weeks		
M. 12, congestion of the brain, and effusion in ventricle by a fall from a ladder (post mort., no inquest).....	F. 44, manslaughter against Martin Jennings.	3 weeks	
F. 69, fractured ribs, caused by an accidental fall against a bedstead.....	F. 88, fracture of the thigh bone (no inquest).....	6 weeks	
In St. George's Hospital, cabriolet proprietor, 45, empyema from fractured ribs—one rib penetrated the pleura—no evidence how fractures were caused—supposed to have been run over by his cabriolet, when intoxicated (post mort.).....	Wounds:—		
In George's Hospital, labourer, 43, inflammation following lacerated wound of left knee—knocked down in Fulham-road, by a horse drawing a cabriolet, when carrying a bedstead, which fell upon him (post mort.).....	Son of a single woman, 12, cutting of throat. (wilful murder against Philarate Horcan).....	instant	
In St. George's Hospital, farrier, 42, fracture of posterior part and base of skull, and laceration of brain—thrown in Battersea Fields from a gig drawn by one horse. The horse ran away, and the gig was upset by coming in contact with a cart, (p.m.).....	Son of a bootmaker, 29 days, punctured wounds, being bitten in the face by his mother (wilful murder against Mary Ann King, his mother).....	3 weeks and 3 days	
	Lighterman, 56, suicide by cutting his throat with a razor.....	15 hours	
	Teacher of languages, 52, suicide by cutting his throat with a razor, being insane.....	instant	
	Gentleman, formerly captain of 55th foot, suicide by shooting himself with a pistol, being at the time of unsound mind.....	20 minutes	
	Drowning:—		
	F. servant out of place, 16, suffocated and drowned herself while in an unsound state of mind.		
	Son of a teacher of languages, 8 mon., drowned in a water-butt; wilfully murdered by Philarate Horcan (the father).		

### CORONERS' RETURNS OF DEATHS BY DISEASE (ADDITIONAL TO THOSE IN HOSPITALS), IN WHICH THE CAUSES ARE ASSIGNED.

duration		duration		duration	
F. 25, disease of the heart (post mort.).....	10 minutes	F. 30, peritonitis from exposure to cold and wet in the streets—no medical treatment.....	*	M. 2 mon., natural death—convulsion fit upon diarrhoea.....	*
F. 1, tubercular disease of the lungs (p.m.) dar. unknown		F. 45, natural death—apoplexy.....	instant	M. 45, empyema.....	6 weeks
M. 65, natural—treated medically for asthma, during the last 3 weeks		F. 68, natural—paralysis upon age and decay—died.....	instant	M. 57, natural death—diseased heart.....	instant
M. 23, { pleuro-pneumonia..... 11 days attended by a chemist during the first 4 days		F. 49, natural death—bodily exhaustion from uterine hemorrhage.....	*	F. 4, natural death—convulsions upon congestion of the brain (post mort.).....	16 hours
M. 58, natural death—apoplexy.....	instant	M. 22, natural death—debility from fever, typhoid.....	*	F. 45, natural death—ossification of the aorta—diarrhoea and vomiting (post mort.).....	*
F. 65, natural death—pulmonary congestion.....	*				

**CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.**

<i>duration</i>	<i>duration</i>	<i>duration</i>
M. 78, natural causes—found dead in bed.	F. 9 weeks, natural. . . . . no previous illness	M. 11, natural—no medical aid . . . . . *
F. 70, fell suddenly in her room, and died in less than an hour	M. about 50, unknown.	F., probable age from 8 to 12 days, unknown, found dead at Blackfriars—probably been dead 5 or 6 months.
(whether from effects of the fall, or natural disease, not sufficient evidence to show.)	M. about 60, natural—no previous illness—sudden insensibility—came sober from a public-house, and died in . . . . . 5 minutes	

**THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.**

<i>St. George's H.:</i>	<i>duration</i>	<i>University College H. (continued):</i>	<i>duration</i>	<i>London H.:</i>	<i>duration</i>
M. 32, fever—pleurisy and phthisis. . . . . *		F. 55, { continued fever. . . . . 24 days		M. 18, consumption . . . . . 6 months	
F. 26, erysipelas. . . . . 9 days		M. 43, { phthisis . . . . . 18 months		M. 70, senile gangrene . . . . . 4 weeks	
M. 50, apoplexy—effusion of blood in the left side of the brain ( <i>post mort.</i> , <i>inquest</i> ). . . . . 2 days		M. 43, { delirium tremens . . . . . *		M. 53, { apoplexy . . . . . 18 hours	
M. 39, apoplexy—blood in the right side of the brain—found in a dying state on the foot-pavement in Grosvenor-crescent ( <i>p. m. inquest</i> ). . . . . *		<i>Fever H.:</i>		M. 53, { extravasation of blood on the left lobe of the cerebrum ( <i>post mort.</i> ). . . . . *	
M. 49, apoplexy—blood effused into the substance of the brain ( <i>post mort.</i> , <i>inquest</i> ) 5 days		F. 57, { diseased liver and kidneys—jaundice		<i>Guy's H.:</i>	<i>duration</i>
<i>Westminster H.:</i>		F. 57, { —in hospital 10 days—from St. Martin-in-the-fields ( <i>post mort.</i> ) . . . . . *		M. 53, fever—pneumonia. . . . . *	
{ chronic bronchitis, with pulmonary emphysema, and great hypertrophy and dilatation of the heart . . . . . 30 years		<i>Small Pox H.:</i>		F. 32, phthisis . . . . . *	
{ continued fever ( <i>post mort.</i> ) . . . . . 2 weeks		F. 21, small-pox, natural, confluent. . . . . 12 days		F. 27, acute pleuritis—renal disease . . . . . *	
<i>Charing Cross H.:</i> —No Deaths registered.		<i>King's College H.:</i>		F. 19, fever—ulcerated bowels . . . . . *	
<i>Middlesex H.:</i>		M. 74, abscess in pelvis after lithotomy ( <i>post mort.</i> ) . . . . . *		M. 19, phthisis . . . . . *	
M. 58, arthritis and erysipelas. . . . . *		M. 16, consumption ( <i>post mort.</i> ) . . . . . 3 weeks		<i>St. Thomas' H.:</i>	
<i>University College H.:</i>		M. 3, scarlet fever . . . . . 2 weeks		M. 10, mucro-enteritis . . . . . *	
M. 51, { hronchitis—emphysema . . . . . 4 years		F. 18, phlegmonous erysipelas of leg . . . . . *		F. 47, pneumonia—phthisis . . . . . *	
{ death from inanition. . . . . *		<i>Bartholomew's H.:</i>		<i>Dreadnought H.:</i>	
F. 49, { aneurism of the arch of aorta . . . . . *		M. 69, erysipelas . . . . . *		{ cerebral inflammation . . . . . 9 weeks	
{ death by suffocation. . . . . *		M. 40, chronic laryngitis . . . . . *		{ subarachnoid effusion.	
		M. 55, apoplexy. . . . . *		{ purulent infiltration of the pituitary gland . . . . . *	
		F. 71, dropsy and diseased heart. . . . . *		{ softening of the central parts of the brain ( <i>post mort.</i> ). . . . . *	
		F. 27, fibrous tumour of the uterus . . . . . *		{ chronic catarrh . . . . . 5 months	
		F. 66, exhaustion . . . . . *		{ vesicular bronchitis. . . . . 10 days	
		F. 21, phthisis . . . . . *		{ great gangrene of both lungs ( <i>p.m.</i> ). . . . . *	

**DISTRICTS OF KENSINGTON AND CHelsea:—**

**CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.**

<i>St. John, Paddington:—</i>	<i>duration</i>	<i>Fulham:—</i>	<i>duration</i>	<i>Brompton:—</i>	<i>duration</i>

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Till 1h. a.m. positive at each examina- tion, and after this time, positive at times when neither hail nor rain was falling, and strongly negative at those times.	See General Remarks.	Cumuli, cirrostratus, and scud were prevalent throughout the day. A slight shower of rain fell at 1h. p.m., and another at 4h. p.m. mingled with hail. A fine double rainbow was visible from 4h. 15m. to 4h. 25m.
MON.	None was shewn till after 6h. a.m., and positive throughout the remainder of the day. The max. took place at 9h. 30m.	See General Remarks.	The sky was partially covered with cirrostratus till 3h. a.m., when it became entirely so; this was of short duration, for at 5h. a.m., with the exception of a bank of cirrostratus in the N.E., the sky was cloudless; from this time to 3h. p.m., detached portions of cumuli and virri were scattered over the sky; at 3h. p.m. the sky became covered, and remained so till 4h. 30m. p.m.; from this time until midnight the amount of cloud was variable.
TUES.	None was shewn till 9h. a.m. Between 9h. and 11h. a.m. positive. Between 11h. 16m. a.m. and 2h. 38m. p.m. generally negative; the tension was strong; no sparks were obtained, or galvanic current shewn. After 2h. 38m. positive till midnight.	See General Remarks.	The sky became cloudless soon after 1h. a.m., and continued so until 4h. p.m., after which time cirrostratus and scud came up very suddenly, and covered the sky; with the exception of a few breaks near the N.W. horizon at 9h. a.m., it continued so till 1h. p.m., from which time till 6h. p.m. three-fourths of the sky were covered; the amount of cloud was variable afterwards till midnight. Rain was falling a little before and after noon.
WED.	Till 4h. p.m. positive. Between 5h. 26m. p.m., and 9h. 37m. p.m. negative; very strong tension, which was recovered very rapidly, after discharge. Sparks were obtained. After 10h. p.m. positive till midnight.	See General Remarks. Rain was generally falling. See General Remarks.	From 1h. a.m. till noon the amount of cloud was variable; after this time till 6h. p.m. the sky was entirely covered; variable afterwards till midnight. The prevailing classes of cloud were cirrostratus and scud.
THURS.	Positive and weak at noon, and at mid- night. Nothing was shewn at any other time.	See General Remarks.	The sky was about one-half covered with cloud until near noon, when it became overcast, and remained generally so until near midnight, when it became suddenly clear. At 3h. p.m. rain, accompanied with hail, began to fall, and continued so for about an hour. Heavy showers of rain also fell occasionally during the evening. At 4h. 50m. p.m. there was a sudden gust of wind to S.W. on the square foot, and the wind gradually changed from W. by S. to N.W., and returned again to W. by S. at 5h. 50m. p.m. There was also a squall of hail and rain between those times.
FRI.	Till 11h. a.m., and after 5h. p.m. positive. Between the above times generally ne- gative. Sparks were abundant, but there was no galvanic current.	See General Remarks. Massive cumuli around the horizon; large cumulostrati S. of the zenith; very large and black clouds E. of the zenith; the large clouds passed away to the south.	The sky was generally clear till noon, when it became nearly covered with cumuli and fleecy clouds. During the afternoon there were large cumulostrati S. of the zenith. The clouds began to clear off about 7h. 30m. p.m., and the sky afterwards remained clear till midnight. Rain was falling in heavy drops at 6h. 48m. p.m.
SAT.	Positive and strong all day, except between 7h. and 9h. p.m., when it was negative, and very strong sparks being abun- dant, and strong galvanic currents frequent.	Between 7h. and 9h. p.m. rain was falling heavily at intervals. See General Remarks for the rest of the day.	About one-fifth of the sky was covered with cloud until 7h. a.m., when it became nearly over- cast, and remained so during the remainder of the day. Rain commenced falling at 4h. p.m., and continued for half an hour. Rain was also falling at 7h. p.m.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39.1; and the mean reading at 7h. 30m. P.M., was 43.2; the mean readings at the Royal Observatory for the same times were 38.8 and 41.6 respectively.

† The mean direction of the wind for the week is S.S.W.

Erratum in the Report of last week.—The least pressure of the wind in lbs. on the square foot for Saturday was inadvertently omitted; it should have been 0.0.

A TABLE OF  
**Births and Deaths registered in the Metropolis,**  
*During the Week ending Saturday, April 4th, 1846.*

ANNUAL SERIES VII.]

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 13,  
(ending Saturday, March 28th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

**Fractures and Contusions:—** duration  
M. about 40 (no employment), fracture of the base of the skull, and vertebra of the neck—no evidence how caused—supposed from a fall down stairs when intoxicated (p.m.)... 35 minutes  
In London Hospital, M. 27, accidental from a cut in his eye by a fall..... 5 days  
In London Hospital, lighterman, 41, natural death, accelerated by an accidental fall.... \*  
In London Hospital, labourer, 63, natural death; inflammation of the lungs, accelerated by an accidental fall .....

\*  
Carpenter, 57, two apoplectic cysts, and softening found in the brain, after a fall of 13 feet on a staircase while at work—symptoms of concussion—whether died from the natural, or the violent cause unknown .....

\*  
Baptist minister, 83, fracture of the neck of the thigh bone, from an accidental fall while walking .....

\*  
M. 52, concussion of the brain by an accidental fall down stairs (post mort.) .....

\*  
M. 68, fever and erysipelas of the head, following contused wound on the head and nose—fell over a bearer of the Westminster election hustings, when walking in Covent-gar. Collecting clerk to a bookseller, 39, abscess and clot of blood on the brain—resulting from accidentally falling backwards (p.m.) 3 weeks  
F. 1, internal injuries received from an accidental fall down stairs..... 10 days  
In King's College Hospital, stableman, 62, hemorrhage from ruptured liver, and large vessels of the body—found in a dying state in a stable—supposed to have been trampled on by a horse (post mort.) .....

\*  
In London Hospital, labourer, 30, accidentally killed by an omnibus passing over his head and neck in Bishopsgate-street  
Coach proprietor (retired), 54, internal injuries by falling out of a chaise, accidentally upset while he was driving it on February 18th.  
M. 68, wound in the thigh from the kick of a horse, followed by inflammation and serious infiltration of the whole limb (no inquest).  
Wife of a poet, 74, accidentally crushed by the wheel of a cart, causing..... instant death

**Fractures and Contusions (continued):—** duration  
M. 77, { injuries from being accidentally run over by a cart (intoxicated at the time) ..... 2 months  
          { amputation of the leg .....

\*  
M. 7, injuries to the head from being run over by a horse and cart in the street accidentally, instant  
In London Hospital, whip-maker, 58, injured knee and leg, how caused unknown .....

\*  
M. 34, { fractured tibia..... \*  
          { mortification and large abscess (no inq.) .....

\*  
M. 6, injury to the spine—phthisis (no inquest) .....

\*  
**Wounds:—**  
Cannan, 48, cutting his throat with a knife in temporary insanity ..... 1 hour  
M. 49, suicide by cutting his throat with a razor while under mental derangement.... 14 days  
**Drowning:—**  
Bargeman, 20, drowned by falling into the Kensington basin, while intoxicated.  
Butler, 57, suicide by drowning—insane.  
Hammerman to a smith, 19, found dead without marks, in the Regent's canal—apparently drowned.  
Seaboy, 16, accidentally drowned by falling from a barge in the River Thames at Wapping.  
News-agent, 26, unknown—found dead in the River Thames at Horselydown, probably been in the water 3 weeks  
Labourer, 29, drowned by being accidentally jerked off a lighter, by a sailing barge running against it in the River Thames, near the Tower .....

1 month  
Mate of a brig (the "May Flower," of Sunderland), 34, drowned by accidentally falling out of a ship's boat into the River Thames under water 4 hours  
F. newly born, unknown; found dead in the River Thames without marks of violence—no evidence whether born alive.  
M. about 60, found dead in the waters of a pond on Blackheath; no marks of violence.  
**Hanging and Suffocation:—**  
F. about 45, found dead—suspended to a cupboard door by a rope—no evidence how she became suspended (no inquest).  
Wife of a cooper, 37, hanged herself in a temporary state of derangement.

**Hanging and Suffocation (continued):—** duration  
M. 84, suicide by hanging, in temporary derangement, brought on by old age.  
Three men, aged respectively 20, 29, and 50 years, suffocated by sulphuretted hydrogen gas escaping from a still at the chemical works of Messrs. Hills, through neglect of one of the deceased .....

instant  
Daughter of a tailor, 5 weeks, asphyxia—by pressure against the mother's breast while asleep—accidental.  
F. a few minutes, probably suffocated.  
M. 15 weeks, accidental choking with a piece of roll that it was fed with.  
In London Hospital, wife of a horsekeeper, 19, abscess and inflammation of the larynx, caused by a fish bone fixed therein whilst eating fish, on February 14th.  
**Burns and Scalds:—**  
In London Hospital, labourer's son, 2, accidental from burns by the clothes taking fire .....

\*  
In London Hospital, son of a maltster, 7, accidental from burns by the clothes taking fire .....

\*  
In London Hospital, F. servant, 27, accidental from burns by the clothes taking fire .....

\*  
In London Hospital, daughter of a dyer, 5, accidental from burns by the clothes taking fire .....

\*  
In London Hospital, daughter of a washerwoman, 6, accidental from burns by the clothes taking fire .....

\*  
Son of a labourer, 5, mortal wounds from an accidental burn..... 36 hours  
Daughter of a labourer, 4, mortal injuries from an accidental burn at a stove (no fire-guard) .....

\*  
In London Hospital, daughter of a single woman, 3, natural death accelerated by an accidental scald..... 5 weeks  
In Bartholomew's Hospital, son of a bricklayer's labourer, accidentally scalded by falling over and upsetting a pot of boiling water while naked .....

5 days  
**Poison:—**  
F. 32, poisoned herself by 1/2 oz. of essence of almonds, being at the time of unsound mind, 21 hours  
M. 18, suicide with laudanum (not known to be insane) .....

several hours

CORONERS' RETURNS OF DEATHS BY DISEASE (ADDITIONAL TO THOSE IN HOSPITALS), IN WHICH THE CAUSES ARE ASSIGNED.

M. 63, natural, supposed from apoplexy .....

almost immediately  
M. 2 days, natural death—convulsive fit..... \*  
M. 63, natural—occasionally complained of gout..... no previous illness  
F. 74, diseased brain, produced by the excessive use of ardent spirits (inquest) delirium tremens (according to medical certificate) .. several years  
F. 45, congestion of blood in the lungs, produced by excessive use of intoxicating liquors .....

\*  
F. 47, loss of blood from the lungs, caused by natural disease of the lungs, (post mort.) .. 3 weeks  
          { serous effusion into and upon the brain  
M. 49, { found insensible 2 hours previously  
          { disease of liver and kidneys (a drunkard) .. of long standing  
M. 17 weeks, exhaustion consequent on long wasting of the body from natural causes .. \*

F. 4, inflammation of the membranes of the brain, produced by natural causes..... \*

M. 23, extravasation of blood on the brain, produced by natural causes—fell in the street and died in .....

3 hours

F. 72, natural death from spasms .....

\*  
F. 21, { serous apoplexy—ill from sick head-ache and vomiting ..... 1 hour  
          { similarly ill .....

10 weeks ago  
M. 62, pulmonary apoplexy (post mort.)..... 2 days  
M. 50, natural causes—supposed in a fit of epilepsy \*  
          { childbirth .....

5 days  
F. 22, { sudden fainting from over-exertion.  
          { flooding from a small portion of the placenta adhering to the womb (attended by a midwife—post mort.) .. \*

F. 29, acute peritonitis .....

\*  
M. 2 months, suffocation from congestion of the lungs, heart, and brain, without disease of any part .....

\*  
M. 68, natural—apoplexy .....

\*  
M. 22, natural death—epilepsy..... \*

F. 72, natural death—cancer in the stomach .. \*

F. 34, puerperal peritonitis .....

\*  
F. 21, suddenly from disease of the heart .....

1 hour  
M. 7 days, found dead in bed without marks—supposed from convulsions. .. \*

F. 42, natural death—fever .....

\*

F. 51, natural death—apoplexy .....

\*  
M. 11 mo., water in the head .....

\*  
F. 57, typhus fever and effusion of serum .....

\*  
F. 13, natural death from exhaustion, emaciation, and atrophy.....

\*  
F. 5 weeks, natural death from convulsions .....

\*  
F. 2 mo., found dead in bed—convulsions .....

sudden  
F. 6 weeks, natural death from convulsions .....

\*  
M. 40, natural death—effusion of blood into the cellular membranes .....

\*  
M. 36, natural death from affection of the chest .....

sudden  
M. 17, natural death from affection of the chest, .. instant  
M. 45, natural death—apoplexy .....

\*  
M. 19, natural death—rupture of a bloodvessel the lungs from disease; no medical assistance 5 minutes .. instant  
F. 10 months, natural death from a fit .....

5 minutes  
M. 1, natural death of a fit—teething..... instant  
F. 5 days, natural death of convulsion fits .....

2 days  
F. 71, pulmonary apoplexy .....

\*  
F. 10 mo., marasmus .....

\*  
M. 6 mo., convulsions .....

sudden  
M. 10 mo., congestion of the brain from suppressed measles.....

\*

M. 67, natural.	no previous illness	duration
F. 5 weeks, natural.	no previous illness	
M. 79, natural—not lately under medical treatment	*	
M. 34, natural.	no previous illness	
M. 52, natural.	no previous illness	
M. 56, natural—dropped into a chair at dinner, and died instantly		
F. 82, natural—no medical aid; speechless and insensible	during 2 days	
M. 75, natural—no medical attendant	sudden	
M. 72, natural—dropped on the floor, and died instantly		
F. 4 weeks, natural.	no previous illness	

F. 65, natural death—precise cause not ascertained	duration
F. 61, found dead without marks of violence.	*
M. 54, natural.	no previous illness
M. 66, natural—no medical treatment for any illness.	*
M. 57, natural—seized with difficulty of breathing, and died in	5 minutes
F. newly born, unknown—born alive without medical assistance.	
F. 54, natural—slight difficulty of breathing for 3 weeks	(no medical aid.)
F. 43, natural death—cause not ascertained	*

F. 14, found dead—precise cause not ascertained.	duration
F. 85, found dead on a close-stool—natural death from old age.	*
M. 7 weeks, found dead in bed without marks of violence.	
F. 5 mo., found dead in bed without marks of violence.	
F. 2, found dead in bed without marks of violence.	
F. 70, natural death—debility and decay of body from age.	
M. 68, natural causes.	sudden

## THIRTEEN HOSPITALS.—CAUSES OF DEATHS (NOT VIOLENT) AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:	duration
M. 52, fungoid tumor in the brain (post mort.)	*
M. 57, old ulcer of leg	*
M. 34, encephaloid disease of the liver	*
M. 70, sloughing of the back—paraplegia	*
F. 37, dropsy—ulceration of the bowels (p.m.)	*
F. 31, large ulcer over the sacrum	*
F. 26, fever	*

Westminster H.:	duration
M. 40, fungus hæmatodes	1 year

Charing Cross H.:	duration
M. 40, phthisis (post mort.)	*
F. 22, phthisis pulmonalis	*

Middlesex H.:	duration
F. 50, { strangulated femoral hernia	*
operation	3 days

University College H.:	duration
M. 57, malignant tumor of the neck	4 months

Fever H.:	duration
F. 32, { fever	*
33 days in hospital from St. Anne's-court, Westminster.	

Fever H. (continued):	duration
F. 25, { erysipelas when convalescent from fever	*
27 days in hospital from the Strand.	
F. 69, { fever	*
from the workhouse in St. Martin-in-the-Fields—5 days in hospital.	

Small Pox H.:	duration
M. 6, small-pox, natural, confluent	9 days

King's College H.:	duration
No deaths from disease registered.	

Bartholomew's H.:	duration
No deaths from disease registered.	

London H.:	duration
M. 1, natural death from cancer oris and hydrocephalus	2 weeks
F. 50, valvular disease of the heart	probably 3 years
M. 21, { diseased liver	1 year
ascites.	6 weeks
M. 35, hydrothorax	*

Gay's H.:	duration
F. 40, cancer in the womb	*
M. 21, phthisis	*

Gay's H. (continued):	duration
M. 55, malignant disease of the bladder	*
M. 37, phthisis	*
M. 20, bronchitis—(phthisis?)	*
F. 38, phthisis	*
F. 19, phthisis	*
F. 20, phthisis	*

St. Thomas' H.:	duration
F. 53, diseased womb	*

Dreadnought H.:	duration
M. 35, { peripneumonia notha	24 days
sudden sinking	9 hours
consolidation of the base of both lungs—remaining part very imperfectly crepitating.	
adhesions of both pleura (post mort.)	
typhus	63 days
diarrhea	46 hours
peritonitis	26 days
M. 22, { extensive ulceration of the lower end of ilium, with adhesions to the bladder	
ulceration of sigmoid flexion (p.m.)	

## DISTRICTS OF ST. GEORGE, HANOVER SQUARE; WESTMINSTER; AND ST. MARTIN'S-IN-THE FIELDS:—

## CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

Hanover Square:	duration
M. 33, { consumption	2 years
ulceration of intestines	1 year
ulceration of larynx	5 months
M. 10 mo., pneumonia	*
M. 5, marasmus	4 years
F. 3, hydrocephalus	18 days
F. 73, inflammation of stomach and bowels	*
F. 61, scirrhus of pylorus (post mort.)	many years
F. 20, childi-th, peritonitis, 7 days after delivery.	

May Fair:	duration
M. 31, disease of the lungs and hæmoptysis	*
M. 58, phthisis	6 months probably
F. 12 hours, convulsions	*
F. 2, hydrocephalus (not certified)	*
F. 2, hydrocephalus	3 months
F. 95, age.	*
F. 70, marasmus.	*
F. 89, old age	*
F. 60, marasmus and diarrhoea	*

Belgrave:	duration
M. 56, gangrene	about 10 days
M. 70, disease of the brain, ending in effusion	6 weeks
M. 12, { continued fever	6 weeks
encephalitis, effusion.	
M. 1, premature birth (about 7 months)	7 hours
F. 70, { apoplexy	7 hours
paralysis of left side.	
remittent fever	6 weeks
F. 1, { dyspeptic derangement of stomach and bowels	4 weeks

Belgrave Square (continued):	duration
F. 1, { pneumonia	*
convulsions.	10 days
F. 84, result of old age.	*
F. 21, inflammation of the bowels	9 days
F. 43, typhus	50 days

St. John the Evangelist:	duration
M. 16 weeks, a fit of convulsions	*
M. 7 mo., acute bronchitis	6 days
M. 38, medullary sarcoma of abdomen (p.m.)	6 week
M. 81, { ulcerated legs	3 or 4 months
bronchitis senilis	1 week
pericarditis	*
M. 36, { thickening of the coats of the valves of the aorta (post mort.)	probably 2 years
gastro-enteritis.	5 days
M. 45, { disease of the heart.	5 days
general anasarca.	14 years
M. 43, { attacks of epilepsy.	2 days
serous apoplexy (post mort.)	2 years
F. 57, asthma	2 years
F. 60, { asthma	2 years
diarrhoea	6 months
F. 3 mo., pertussis	2 weeks

St. Margaret:	duration
M. 46, phthisis pulmonalis	*
M. under 1, { porrigo	1 month
pneumonia	6 days
convulsions.	16 hours

St. Margaret (continued):	duration
M. under 1, atrophy	1 month
M. 60, { constipation	7 days
inflammation of the bowels	2 days
M. 43, phthisis	*
M. 24, phthisis pulmonalis	12 months
M. 45, tetanus	14 days
F. 1, hydrocephalus	3 weeks
F. 35, ulceration of the bowels	2 months
F. 51, consumption	*
F. 4, inflammation of the brain	*
F. 1, { atrophy	3 months
effusion on the brain	2 weeks
F. 30, hæmoptysis	*
F. 1, pertussis, pneumonia	19 days

Charing Cross:	duration
M. 65, dropsy	*
M. 3, { arechnitis	16 days
hydrocephalus	10 days
F. 2, { bronchitis	2 days
hydrocephalus	2 days
F. 74, { debility from age	3 months
extensive sores on sacrum from pressure	3 months
F. 76, debility from age	*

Long Acre:	duration
F. 3, hydrocephalus	3 weeks
F. 18, consumption	2 years

## DEATHS BY SMALL POX, TYPHUS, SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, ETC.

Small Pox:	duration
M. 1, confluent small pox (never vaccinated)	14 days
M. 20, { fever	6 days
jaundice—variola—purpura (not stated whether vaccinated)	*
F. 7, { variola (malignant)	7 days
petechiæ from all mucous surfaces—unvaccinated.	
M. 3, small pox (without vaccination)	11 days
M. 14 weeks, small pox (not vaccinated)	4 days
M. 3, { variola	9 days
(1 year after vaccination without effect)	

See Small Pox Hospital.	
Typhus:	duration
M. 6, typhus fever	12 days
F. 60, sequela of fever	*
F. 6, typhus fever	2 days
F. 29, typhus fever	2 weeks
F. 25, fever (synochus) with chest affection	*
M. 6 mon. { irritative fever	1 month
convulsions from dentition	7 hours
F. 7, { typhus fever	3 weeks
apoplexy	15 hours
M. 2, continued fever	8 days
M. 46, { typhus	9 days
meningitis	5 days
F. 18, typhus fever	3 weeks
M. 22, typhus fever	9 days
natural decay	3 weeks
F. 90, { slight fever and occasional discharge of mucus and blood from the intestinal canal	*
M. 4, fever with effusion on the brain	*
M. 4, fever	2 weeks
M. 1, { low fever	9 days
convulsions	24 hours
M. 3, { low fever	5 weeks
effusion on the brain	3 weeks
F. 1, fever	30 days
M. 15, fever, laryngitis	2 days
F. 43, typhus fever	8 days

Typhus (continued):	duration
F. 18, synocha	*
F. 7, fever	*
F. 5 months, typhus fever	1 month
M. 1, { fever	1 month
pneumonia	*
M. 56, typhus fever	19 days
M. 27, typhus	8 days
F. 18, typhus	6 weeks
M. 2, { fever	7 days
convulsions	1 day
F. 3, { typhus fever	10 days
pneumonia and convulsions	2 days

(See above.)	
Other cases of Fever:	duration
F. 5, { infantile fever	14 days
hydrocephalus	14 days
M. 72, { enlargement of the liver—dropsy	7 months
fever.	*
F. 5, infantile remittent fever—convulsions	*
F. 43, rheumatic fever	2 weeks
M. 3, { infantile remittent fever	13 days
hydrocephalus	*
tubercles in meninges, post mort.	
F. 2, { remittent fever	*
phthisis (post mort.)	6 months
F. 2, remittent fever	3 weeks

Syphilis:	duration
M. 24, syphilis—consumption	*
M. 14 weeks, secondary syphilis	since birth

Hæmorrhage:	duration
M. 3 days, epistaxis	*

Malformation:	duration
M. 2, { deformed spine	from birth
hydrothorax	8 days
F. 19 days, malformation of the heart, producing fits	from birth
F. 37 days, spina bifida	*
F. 1 hour, deformity; spina bifida of the cervical vertebrae	*

Hernia:	duration
F. 60, umbilical and ventral hernia	20 years

See above.	
Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
F. 39, hæmorrhage in childbirth	2 days
F. 31, { childbirth	9 days
exhaustion	13 days
F. 32, { childbirth	13 days
general exhaustion	*
F. 24, hæmorrhage after delivery, in a scrofulous constitution	*
F. 25, { partus	9 days
metria	4 days
F. 36, presentation of placenta—flooding	*

See above.	
Delirium tremens:—	duration
M. 28, delirium tremens connected with inflammation of the lungs	5 weeks
M. 56, { delirium tremens	2 months
effusion on the brain, and into pericardium	7 hours
M. 48, { disease of the stomach	3 days
delirium tremens	3 days
Assigned in abstract to disease of stomach.	
M. 52, delirium tremens	3 months

Intemperance:—	duration
M. 74, low delirium produced by the recent death of his wife—long habit of drinking.	*

See above.	
Privation:—	duration
M. 6 months, gangrene of the left cheek from exposure to cold	1 week

Operation:—	duration
M. 55, { chronic bronchitis; derangement of the liver and stomach	of long duration
continued diarrhoea brought on and kept up by prolapsus, the result of an operation for fistula	*

## RETURNS AFTER POST MORTEM EXAMINATION, ADDITIONAL TO THOSE WHICH ARE DISTINGUISHED ABOVE.

duration	
M. 3, { scrofulous tumour between crura cerebri and pons varolii	*
effusion into the ventricles	3 months
partial hemiplegia (left side)	half day
M. 1, { coma and convulsions	*
anæmia	
M. 49, { medullary sarcoma, involving the whole of the mesenteric glands	long standing
inflammation of the bowels	18 days
M. 72, phthisis pulmonalis	18 months
F. 58, disease of the liver, gall-bladder, pylorus, and kidneys	2 years
M. 34, pneumonia	*
M. 62, asthma	*

duration	
M. 74, apoplexy	*
F. 47, bronchitis	3 weeks
M. 45, { gangrene and hæmorrhage	16 years
ulcers of the legs	1 month
F. 25, strangulation of ilium by twisting, and an adventitious band of fibres crossing to the cæcum	72 hours
F. 33, { scirrhus and dropsy of ovary	18 months
peritonitis	3 days
F. 5 mo., { enlargement of the liver—jaundice	5 months
abscesses.	
F. 8, tuberculous softening in the right lung, and very extensive disease of the mesenteric glands, &c. (the medical man called in late)	*

duration	
F. 7, { phthisis	4 months
abscess in the lungs with tubercles	
tubercular inflammation in the whole extent of both lungs	several years
F. 39, { hypertrophy of the liver—adhesion of internal viscera—scirrhus of pancreas	attack of continued fever
attack of continued fever	*
M. 45, induration of liver	*
F. 78, old age	*
F. 55, cancer of the vagina and uterus	16 months
M. 17, disease of the brain	16 days
F. 21, { perforation from ulceration of the stomach	24 hours
peritonitis with effusion.	
Query. Was this a case of p.m. exam?	

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 4th April, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, (from 12 Observations, corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive at every examination throughout the day; the tension was moderately strong.	See General Remarks.	Three-fourths of the sky were covered with cloud till noon; from that time until 7 p.m. one-half was covered; from 7 p.m. till 10 p.m. 30 m. p.m., it was cloudless and overcast afterwards till midnight. The prevailing clouds during the day were cirrostratus and scud.
MON.	Positive all day: max. at midnight.	See General Remarks.	Overcast till 4 h. a.m.; the amount of cloud after this time was very variable, the sky at times being free, and at other times covered with cirrostratus and scud. At 10 h. 48 m. p.m. an unusually fine meteor was seen at an elevation of 20° in the N.E.; it moved towards the right and down- wards, emitting a light such as to be attributed to lightning by persons who did not see the meteor, and during the time of its appearance every thing around was distinctly seen; its duration was from 4 to 5 seconds.
TUES.	Positive all day: max. at 9 h. a.m. and at 9 h. p.m.	See General Remarks.	The sky was one-half covered by clouds till 4 h. a.m.; it was wholly covered between 4 h. a.m. and 8 h. a.m.; after this time the amount of cloud was very variable. The kind was cirrostratus, cumuli, fleecy clouds, and scud.
WED.	Positive all day, except during the con- tinuance of a shower of rain, between 11 h. a.m. and 11 h. 33 m. a.m., when it was negative.	See General Remarks.	Nearly cloudless till 4 h. a.m.; after this time the sky was generally covered by cloud; at times, however, it was only partially covered. Showers of rain were occasionally falling between noon and midnight.
THURS.	Till 7 h. 5 m. a.m. none was shown. Between 7 h. 5 m. a.m. and 7 h. 14 m. ne- gative; sparks occasionally. From 7 h. 14 m. a.m. to 9 h. 58 m. a.m. none was shown. From 9 h. 58 m. a.m. to 10 h. 10 m. a.m. negative; very strong tension; sparks abundant, and a galvanic current. A little positive from 2 h. to 4 h. a.m., and none was shown afterwards.	See General Remarks. Rain falling. See General Remarks.	Overcast until 9 h. a.m.; from which time until 4 h. p.m. the amount of cloud was variable; after- wards it was overcast with slight exceptions during the rest of the day. The prevailing clouds were cirrostratus, fleecy clouds, and detached cumuli. A squall of rain and hail occurred at 7 h. 5 m. a.m., when a clap of thunder was heard in the west; rain was again falling at 9 h. 58 m. a.m., and at intervals throughout the day in heavy showers. During the afternoon and evening the wind was blowing in occasional gusts to 4 lbs on the square foot, sometimes to 5 lbs., and once at 11 h. 45 m. p.m. to 8 lbs.
FRI.	Till 11 h. 50 m. a.m. none was shown. From 11 h. 50 m. a.m. to 11 h. 52 m. ne- gative; sparks and a galvanic current. None during the afternoon: positive at midnight.	See General Remarks. Rain and hail falling. See General Remarks.	Three-fourths of the sky were covered with cloud till 4 h. a.m.; it was cloudless afterwards till 9 h. a.m.; then variable till 4 h. p.m., and overcast during the remainder of the day. The prevailing clouds were cirrostratus, cumuli, fleecy clouds, and scud. The wind was blowing throughout the greater part of the day with a pressure varying from 1 lb. to 3 lbs.; occasional gusts to 4 lbs., and at 6 h. 20 m. a.m., and 4 h. 25 m. p.m. there were gusts of 9 lbs. to 11 lbs. respectively. A hail storm occurred at 11 h. 50 m. a.m.
SAT.	None was shown during the day, except at times when hail and rain were falling, and at each of these times it was negative and generally very strong.	See General Remarks.	The sky was covered with cirrostratus and scud throughout the day. Rain was falling heavily from noon till 4 h. p.m. The wind was blowing in gusts from 3 lbs. to 5 lbs. on the square foot from 5 h. to 11 h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the fall rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6 h. 30 m. A.M., was 43.8; and the mean reading at 7 h. 30 m. P.M., was 49.2; the mean readings at the Royal Observatory for the same times were 42.4 and 47.5 respectively.

† The mean direction of the wind for the week is S.S.W.

DISTRICTS of the Metropolis, (34 in number, and comprising 129 Registrars' Districts)

# EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 14, (ending Saturday, April 4th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions :—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued)	duration
In Middlesex Hospital, painter, 45, fracture of the skull, caused by an accidental fall from a stack of timber .....	*	M. newly born, blows on the head causing fracture of the skull and laceration of the brain—wilful murder against some person or persons unknown.		Son of a locker in her Majesty's Customs, 13, drowned in the River Thames—no positive proof by what means.	
In Middlesex Hospital, daughter of a carver, 8, abscess in the shoulder from a fall in the street, terminating in pericarditis.....	18 days	In Middlesex Hospital, widow of a major in the army, 67, fractures of the thigh accidentally caused—(by what means?).....	*	M. about 17, drowned by accidentally falling from a plank into the River Thames, whilst walking thereon, from Deptford pier, on board of H. M. steam packet "Lynx," under water .....	24 days
M. 29, injuries of the head and body by a fall over the banisters of the spiral stairs at the Burlington Hotel, when intoxicated... a few minutes		Wounds :—		Hanging and Suffocation :—	
F. 90, mortal internal injuries caused by slipping from the street into a beer cellar. . . 6 days		M. 33, suicide with a razor—windpipe and gullet separated from the tongue, causing suffocation—temporary insanity .....	instantly	In Bartholomew's Hospital, dyer, 38, hanging himself by a cord to a nail in the wall of his room, at King-street, Cloth Fair, his feet being off the ground—temporary insanity—suspended .....	about 20 minutes
Labourer, 30, natural death, from inflammation of the lungs, which may have been accelerated by a fall .....	*	M. 26, cut his throat in a temporary state of insanity.		M. 50, hanged himself—state of mind not known.	
Coach painter, 28, injuries to the head and spine by falling off a stage to the ground at the London and South Western railway, accidentally .....	10 minutes	F. 16, died from a wound inflicted on her throat by her husband, he being deranged at the time, and since dead from a similar wound inflicted on himself .....	*	Solicitor, 49, hanged himself with a handkerchief to the rails of the stair banisters, when of unsound mind—the feet touched the stairs below .....	about 10 minutes
In Middlesex Hospital, foreman of a timber-yard, 42, fracture of the bones of the left leg and thigh, caused by a piece of timber having accidentally fallen upon him.....	*	Drowning :—		M. 17, hanged himself in a temporary state of insanity.	
In Westminster Hospital, son of a labourer, 6, internal injuries—slipped off the foot-pavement in Tothill-street—a4-wheeled waggon, drawn by three horses, went over his body, .....	20 min.	M. 56, drowned himself in a cistern of water; state of mind not known.		M. 57, natural death, which may have been accelerated by suffocation, whilst eating.	
In Middlesex Hospital, sailor, 64, exhaustion after amputation above the knee—run over by a cart on Dec. 10, 1845, causing compound fracture of the leg. The periods from fracture to death, and from amputation to death, should be stated not by dates, but by the number of days, hours, &c. ....	*	M. 57, drowning—found drowned in the River Thames, near Swan Stairs, Dowgate; but no evidence how it was occasioned ....	under water about 6 hours	F. 5 mon., found dead, without marks of violence—apparently suffocated.	
In Bartholomew's Hospital, labourer, 34, fracture of his skull, and rupture of an artery from being accidentally thrown down by a horse, as he was crossing Goswell-road, (post mort.).....	4 days	M. 36, found dead in a water-but; apparently drowned—but how caused unknown.		Burns and Scalds :—	
Son of an umbrella-maker, 4, injury of the head, from being pulled down by a dog tied by a string at play .....	1 month	M. supposed about 50, found dead in the waters of the River Thames, without marks of violence—apparently drowned.		In Middlesex Hospital, F. 23, burns by her clothes taking fire, as she sat asleep before a room fire-place, on the 19th March.	
In Westminster Hospital, labourer, 37, fracture of the skull and laceration of the brain, by a blow with a poker, from Silvester Hou-lahan, when quarrelling—manslaughter (post mort.)..	5 days	Son of a smith, 1, drowning in the water of a well, into which he accidentally fell, the well having been left open, and dangerous.		(Not the date, but the number of days should be given.)	
		Son of a boiler-maker, 7, accidentally drowned in the waters of the River Ravensbourne, by falling therein.....	under water ½ hour	F. 24, burns extending over one-third of the body (no inquest).....	5 days (an imperfect return.)
		Widow of a sailor, 52, found dead in the waters of the Grand Surrey Canal—no evidence how she came there.		Poison :—	
		Single woman, 52, found dead in the water of the Grand Surrey Canal.....	missing 1 hour	M. 2, accidentally poisoned by ten drops of essential oil of almonds .....	*
		M. 26, drowned by accidentally falling out of a barge into the River Thames.		Physician, 50, prussic acid—ran 15 yards from Hyde Park, and died .....	instantly
				Assistant to a colour-maker, 49, accidentally taking too much opium, in order to produce sleep .....	12 hours

## CORONERS' RETURNS OF DEATHS BY DISEASE (ADDITIONAL TO THOSE IN HOSPITALS), IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 16, prisoner in the House of Correction, water on the brain .....	13 days	M. 6 weeks, natural—frequent convulsions—no medical aid .....	*	M. 2 mon., natural death, convulsions .....	*
F. 33, effusion of water into the ventricles of the brain.....	no previous illness	M. 1, disease of the brain and intestines, occurring during neglect of the parents to supply sufficient and proper nourishment..	*	F. 31, natural death—rupture of an ulcer in the Fallopian tube .....	*
F. 63, sanguineous apoplexy—clot of blood about 4 oz., in the left ventricle; found in a dying state on the floor in her room (p.m.)		M. 50, pulmonary consumption .....	*	M. 32, natural death—apoplexy .....	*
In University College Hospital, F., about 45, serous apoplexy—serum in the substance of the brain (post mort.).....	*	F. about 60, natural death—most probably apoplexy .....	3 hours	F. 31, natural death—apoplexy .....	*
M. 52, apoplexy, found dead in bed.		M. 8 months, acute bronchitis.....	24 hours	M. 68, natural death from disease of the heart, instantly	
F. 1, convulsions .....	*	M. 1, natural death by the visitation of God—teething.....	*	F. 3 mon., natural death—convulsive fit upon diarrhoea .....	sudden
M. 40, suffocation from the bursting of a blood-vessel in the lungs .....	5 minutes	M. 67, natural death—apoplexy .....	sudden	F. 20, natural death—convulsive fits upon congestion of the brain .....	*
M. 56, natural; subject to spasm of the chest		M. 1, natural death in a fit .....	*	M. 4 weeks, natural death—convulsion fits	*
M. 7 days, innutrition—feeble .....	from birth	M. 37, found dead in his bedroom—apparently from rupture of a blood-vessel in the lungs.	*	M. 84, apoplectic fit from intoxication .....	instantly
M. 57, extravasation of blood on the brain produced by natural disease.....	*	F. 66, natural death from disease of the heart	*	F. 55, natural death—disease of the heart and dropsy (post mort.) .....	*
M. 9 weeks, natural—(not under medical treatment) died in convulsions which lasted .....	½ hour	F. 26, found dead without marks of violence—supposed cause disease of the lungs .....	*	M. 4 mon., found dead in bed by the side of the mother—convulsions.	*
M. 63, suffocation from a discharge of blood into the air passages, caused by natural disease .....	*	M. 35, natural death—inflammation of the lungs	*	M. 1, natural causes—convulsions .....	*
F. 42, congestion of the brain and lungs from excessive intoxication .....	*	M. 42, natural death from apoplexy .....	immediate	F. 69, rupture of the spleen from disease.....	*
		M. 70, natural death, extensive bronchitis of both lungs (post mort.) .....	*	M. 3, convulsions .....	*
		M. 1, natural death—fits—teething .....	*	F. 22, ulceration of the stomach (post mort.) ..	*
		M. 2, natural death—convulsions .....	*	F. 73, asthma—sudden.....	2 years
				M. 24, chronic inflammation of the stomach, (post mort.) 4 days	
				F. 69, disease of the heart—visitation of God, sudden	
				F. 71, natural death—apoplectic fits .....	16 hours

## CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 21, { found on the floor insensible, and died from natural causes in . . . . . } hour (no previous illness.)		F. 4 mon., found dead in her mother's arms, without marks of violence.		F. 55, found dead, without sufficient marks to cause her death.	
F. supposed to have been stillborn (parents un- known), found in the Serpentine River, p.m.		M. 7, found dead, without marks of violence— cause of death unknown.		F. new-born, found dead.	
M. 46, natural—not under medical treatment	*	F. 65, found dead, apparently from natural causes.		M. 58, natural causes . . . . . sudden	
F. 2 mon., natural causes . . . . . *		F. new-born, found dead in a privy, without marks.		F. 14, natural causes . . . . . *	
Poor brother, 82, left—not complaining of illness on the previous evening. (Of what Institution?)		M. 5 mon., found dead without marks of violence.		M. 11 weeks, natural—undigested bread and milk administered 10 hours previously—not a single morbid appearance found on the body (post mort.)	
				M. 61, natural death—exhaustion . . . . . *	

## THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:	duration	Fever H. (continued):	duration	Guy's H. (continued):	duration
F. 71, { hernia . . . . . 7 years strangulated . . . . . 6 days		F. 40, { pneumonia . . . . . *		M. 30, psoas abscess—lumbar abscess . . . . . *	
Westminster H.:		F. 40, { in hospital 7 days, from Camberwell, (post mort.)		F. 22, strumous peritonitis . . . . . *	
F. 22, phthisis pulmonalis . . . . . 1 year		Small Pox H.:		F. 8, strumous meningitis after fever—bronchitis . . . . . *	
Charing Cross H.:		F. 4, small pox, natural, confluent . . . . . 11 days		St. Thomas' H.:	
F. 25, valvular disease of the left cavities of the heart . . . . . *		King's College H.:		M. 54, hepatitis . . . . . *	
Middlesex H.:		F. 12, melanosis of the eyeball . . . . . *		M. 27, { abscess of thigh after amputation supposed phthisis—no examination allowed . . . . . many months since	
M. 66, { caries of metatarsal bones . . . . . 2 years phthisis . . . . . 2 years		F. 62, Bright's disease of the kidneys . . . . . 3 months		F. 24, syphilitic sloughing . . . . . *	
M. 27, dropsy from diseased heart . . . . . 3 years		Bartholomew's H.:		F. 22, diseased brain—peritonitis . . . . . *	
M. 46, podagra . . . . . some weeks		M. 44, chronic peritonitis . . . . . *		F. 30, endocarditis—hydrops . . . . . *	
F. 54, pleuritis . . . . . 8 weeks		M. 20, lumbar abscess—diseased lungs . . . . . *		F. 13, { pneumonia . . . . . *	
University College H.:		M. 40, erysipelas . . . . . *		cough . . . . . 7 weeks	
No deaths registered.		M. 44, nephritis . . . . . *		Dreadnought H.:	
Fever H.:		F. 51, apoplexy . . . . . *		F. 27, { caries of ribs . . . . . 10 months phthisis . . . . . 4 months	
M. 6, { fever . . . . . *		F. 33, phthisis . . . . . *		M. 27, { miliary tubercle at the base of each lung cavity in the left base . . (post mort.)	
M. 33, { from St. Ann's-court, Westminster, in hospital 6 weeks . . . . . 7 weeks		F. 59, cause unknown, supposed debility . . . . . *		phthisis . . . . . 18 months	
M. 38, { in hospital 28 days . . . . . 3 months		F. 19, scarlet fever—effusion into the brain . . . . . *		tubercular infiltration of the entire left lung . . . . . *	
F. 38, { in hospital 9 days, from Duke's-row, St. Pancras . . . . . *		London H.:		extensive cavity in left apex (post mort.)	
		M. 36, consumption . . . . . 10 months			
		M. 41, diabetes . . . . . 1 year			
		F. 30, ovarian dropsy . . . . . 18 months			
		Guy's H.:			
		M. 55, bronchitis . . . . . *			
		M. 71, bronchitis . . . . . *			

## DISTRICTS OF ST. JAMES, WESTMINSTER; AND ST. MARYLEBONE:—

## CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

Berwick Street:	duration	All Souls' (continued):	duration	The Rectory (continued):	duration
M. 28, phthisis pulmonary . . . . . 1 year		F. 5 mon., inanition from want of breast milk, (not certified, no medical attendant) . . . . . *		F. 24, phthisis . . . . . *	
F. 7 mon., pneumonia . . . . . 5 days		F. 66, natural decay (not certified, no medical attendant) . . . . . *		F. 46, typhus (post mort.) . . . . . *	
F. 67, long disease—brain affection . . . . . *		F. 1, convulsions . . . . . 9 months		F. 1, rubcola . . . . . *	
F. 8, convulsions . . . . . 18 months		F. 1, hooping cough, with convulsions . . . . . 2 months		St. Mary:	
Golden Square:		F. 40, inflammation of lungs . . . . . 7 weeks		M. 65, erysipelas . . . . . 21 days	
M. 1, convulsions . . . . . *		F. 4, { hooping cough . . . . . 3 weeks		M. 11 mon., bronchitis . . . . . 7 days	
M. 73, paralysis . . . . . 2 years		pneumonia . . . . . 3 weeks		M. 11 mon., hydrarthrus . . . . . 7 days	
M. 64, { chronic inflammation of the brain . . . . . 18 months		Cavendish Square:		M. 1, { hooping cough . . . . . 4 weeks	
apoplexy (post mort.) . . . . . 12 hours		M. 79, old age—asthma—paralysis . . . . . *		convulsions . . . . . 12 days	
M. 9 mon., cynanche trachealis; rachitis . . . . . 2 days		M. 29, { ulceration and perforation of the stomach . . . . . *		M. 55, { paralysis . . . . . 6 years	
M. 21, consumption . . . . . *		inflammation (post mort.) . . . . . 2 days		diarrhoea . . . . . 8 days	
F. 5 mon., { fever . . . . . *		M. 57, { ossified aortic valves . . . . . *		F. 1, hydrocephalus . . . . . 10 months	
water on the brain . . . . . *		enteritis . . . . . 48 hours		F. 72, bronchitis, aggravated by large bron- chocele . . . . . 9 days	
F. 39, phthisis . . . . . *		F. 1, convulsions . . . . . 12 hours		F. 75, bilious gastric fever . . . . . 9 days	
St. James's Square:		F. 56, { enlarged uterus and ovarium . . . . . many years		Christ Church:	
M. 12 minutes, from weakness.		dropsy . . . . . 8 months		M. 3, { pertussis . . . . . 1 month	
All Souls':		The Rectory:		bronchitis . . . . . 3 weeks	
M. 6, tabes mesenterica . . . . . 5 months		M. 2, measles . . . . . 2 weeks		M. 39, { diseased liver . . . . . 3 months	
M. 55, phthisis . . . . . 3½ years		M. 54, pneumonia . . . . . 7 days		ascites . . . . . 7 weeks	
M. 3 weeks, general debility and exhaustion, following an attack of diarrhoea . . . . . 10 days		F. 72, decay of nature (no medical attendant) . . . . . *		M. 1 mon., convulsions . . . . . 2 weeks	
M. 53, { chronic hepatitis . . . . . 6 weeks		F. 26, disease of the brain . . . . . 9 weeks		M. 5, { scarlatina . . . . . 3 weeks	
atrophy . . . . . 4 days		F. 63, apoplexy . . . . . 36 hours		ascites . . . . . 1 week	
M. 22, { acute rheumatism . . . . . 4 days		F. 1, mesenteric disease . . . . . 3 months		M. 10 weeks, marasmus . . . . . since birth	
pericarditis . . . . . 3 days		F. 56, pneumonia . . . . . *		M. 75, debility from age . . . . . *	
M. 38, exhaustion, consequent on fistula in perineo . . . . . some years		F. 52, apoplexy . . . . . *		F. 18, { puerperal fever . . . . . 7 days	
M. 68, inflammation of the liver . . . . . 10 days		F. 11, marasmus . . . . . *		confined . . . . . 3 weeks	
F. 43, diseased heart . . . . . 2 years		F. 7 mon., rubcola . . . . . *		F. 7, pertussis . . . . . 1 month	
F. 54, { pleuritis . . . . . 10 days		F. 7 mon., arachnitis (post mort.) . . . . . *		St. John's:	
empyema . . . . . 2 days		F. 90, apoplexy (post mort.) . . . . . *		M. 57, { epilepsy . . . . . *	
F. 10 days, icterus . . . . . since birth		F. 10 mon., pneumonia (post mort.) . . . . . *		general paralysis . . . . . 12 months	
F. 39, pneumonia . . . . . 4 days		F. 87, old age . . . . . *		M. 49, disease of the liver . . . . . 14 days	
F. 6 days, premature birth (a twin child—the other stillborn).				M. 46, strangulated femoral hernia (p.m.) . . . . . 2 days	
				M. 1, pneumonia from measles . . . . . 5 days	
				F. 78, jaundice and disease of the liver . . . . . 1 month	

## DEATHS BY SMALL POX, TYPHUS, SYPHILIS, MALFORMATION, STONE, CHILDBIRTH, AND INTemperance.

Small Pox:	duration	Typhus (continued):	duration	Syphilis:	duration
F. 10, { small pox . . . . . 11 days		F. 65, { typhus fever . . . . . 1 week		M. 47, syphilis—phthisis . . . . . *	
had a few pustules when 2 months old, supposed to be small pox, was slightly indisposed—2 or 3 marks remained permanent.		F. 9 days, eruptive fever . . . . . *		(See above.)	
M. 1, small pox, natural . . . . . 2 weeks		F. 5, { chronic and acute bronchitis . . . . . 14 days		Malformation:	
M. 1, small pox, natural . . . . . 12 days		F. 5, { typhoid fever, from residing in an un- wholesome apartment . . . . . *		F. 3 mon., malformation of the head.	
M. 46, small pox (not stated whether vaccinated) . . . . . 3 weeks		M. 5, fever . . . . . 7 days		Stone:	
F. 6 mon., small pox, natural . . . . . 3 weeks		F. 76, fever . . . . . *		M. 72, stone in the bladder—sloughing and abscess in the pelvis (post mort.) . . . . . *	
F. 3, confluent small pox (not vaccinated) . . . . . 21 days		F. 10, typhus fever . . . . . 2 weeks		F. 17, nephritic calculus—atrophy . . . . . 3 months	
F. 2, small pox (without vaccination) . . . . . 14 days		M. 34, typhus fever . . . . . 2 weeks		Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
F. 2 mon., small pox, natural . . . . . 10 days		M. 1, febris—gastritis . . . . . 2 weeks		F. 23, puerperal fever . . . . . *	
F. 2 mon., small pox, natural . . . . . 3 days		M. 32, ulcerated sore throat—typhus . . . . . *		F. 33, puerperal peritonitis . . . . . 5 days	
M. 6, variola (not stated whether vaccinated) . . . . . 1 week		M. 43, pneumonia—typhus . . . . . *		F. 35, { puerperal fever . . . . . 5 days	
F. 3, small pox (not vaccinated) . . . . . 9 days		F. 9 mon., synochus . . . . . 3 weeks		childbirth . . . . . 9 days	
M. 7, small pox (never vaccinated) . . . . . 4 days		M. 4, typhus fever . . . . . 15 days		F. 39, { childbirth—premature delivery . . . . . 7 days	
M. 1, confluent small pox . . . . . 6 days		F. 4, { low fever . . . . . 5 weeks		peritonitis . . . . . 4 days	
(vaccinated at the age of 2 months)		F. 14, typhus fever . . . . . *		F. 35, internal uterine hæmorrhage . . . . . 15 hours	
F. 4, small pox (not stated whether vaccinated) 14 days		F. 43, fever . . . . . 7 days		Query—Did this occur in childbirth? See above.	
M. 10 mon., small pox, natural . . . . . 9 days		F. 66, typhus fever . . . . . 7 days		phthisis . . . . . 3 years	
F. 7, small pox, natural . . . . . 11 days		F. 10, typhus fever . . . . . 11 days		pileps . . . . . 2 years	
See Small Pox Hospital.		F. 20, typhus fever . . . . . 3 weeks		dropsy . . . . . 4 months	
Varicella:		Other cases, not assigned in abstract to Typhus:		premature labour . . . . . 28 hours	
M. 8 mon., { pertussis . . . . . 1 month		M. 11 weeks, hydrocele—low fever . . . . . *		(assigned in abstract to phthisis.)	
congestio cerebri . . . . . 2 weeks		F. 62, { paralysis . . . . . some months		Intemperance:	
convulsions . . . . . 1 week		terminating in typhoid fever . . . . . 3 weeks		F. 37, { long course of intemperance . . . . . 14 days	
varicella . . . . . 5 days		F. 53, { acute rheumatism . . . . . 10 weeks		gastro-enteritis . . . . . 1 year	
Typhus:		fever . . . . . 3 weeks		chronic bronchitis and phthisis . . . . . *	
M. 33, typhus fever . . . . . 5 days		enteritis . . . . . 10 days		M. 42, pneumonia et pleuritis—diseased liver— gastritis and enteritis, some time from drinking.	
M. 71, gastric fever . . . . . 10 weeks		F. 24, { rheumatic fever . . . . . 5 days		See above.	
M. 73, fever—bronchitis . . . . . 7 weeks		pericarditis . . . . . 2 days			
F. 9, { fever . . . . . 3 weeks		F. 14, febris remittens . . . . . 20 days			
sloughing ulcer of the cheek.		F. 6, { infantile remittent fever . . . . . 17 days			
		effusion into the brain (post mort.) . . . . . 7 days			
		M. 1, remittent fever, with bronchitis . . . . . *			

## RETURNS AFTER POST MORTEM EXAMINATION IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

	duration		duration		duration
F. 37, pneumonia—apoplexy of lungs and brain . . . . . 1 month		M. 1, { hooping cough . . . . . 1 month		M. 37, Bright's disease . . . . . 6 months	
M. 59, ossification of the aortic and mitral valves —general dropsy, except within the peri- cardium . . . . . about 10 months		bronchial congestion—tubercles in lungs—effusion of serum on the brain convulsions . . . . . 9 hours		M. 32, granular disease of the kidneys . . . . . *	
F. 5 mon., pneumonia . . . . . *		hydrocephalus—fluid in lateral ven- tricles . . . . . 14 days		M. 76, { stricture of the urethra . . . . . 2 years	
M. 23, phthisis pulmonalis . . . . . 20 weeks		softening of brain . . . . . *		nephritis . . . . . 5 weeks	
F. 4, fungus hæmatodes of the right lobe of liver, and right kidney . . . . . 6 months		F. 8, tubercular peritonitis—pneumonia . . . . . *		F. 3, pleuropneumonia—both lungs . . . . . 7 weeks	
F. 21, { enlarged and fatty liver . . . . . 2 or 3 yrs.		measles . . . . . 5 months		F. 53, apoplexy (1st attack) . . . . . 27 hours	
enteritis and peritonitis . . . . . 7 days		marasmus . . . . . 3 months		M. 1, scarlatina anginosa . . . . . 5 days	
		entire conversion of left lung into one vomica . . . . . *		F. 54, { pneumonia of left lung . . . . . about 15 weeks	
				hepatization and purulent infiltration, &c. . . . . *	
				Query.—Was this a case of post mort. exam.?	

# METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 11th April, 1846.

Day.  —  1846	Phases  of the  Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers								Difference between the Dew Point Temperature and Air Temperature				Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	WIND						Mean Amount of Cloud, 0—10	Rain in inches, read at 9 o'clock the next morning
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer	Lowest on the grass, as shown by a self-register- ing Thermometer	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean of 12 Diffs. DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive at every examination throughout the day: the tension was moderately strong.	See General Remarks	Overcast till 4h. p.m., after which time the clouds became broken in every direction, and at 5h. 30m. p.m. the sky was cloudless; it continued so till 11h. p.m.: cloudy afterwards till midnight. Rain was falling heavily until 2h. 30m. p.m.
MON.	Till 7h. p.m. none was shewn: between 7h. and 9h. negative: sparks occasionally, and after 9h. positive till midnight.	See General Remarks.	The sky was overcast till noon, with the exception of a few breaks in the N.E., which occurred at 2h. a.m.; from noon till 3h. p.m., about three-fourths of the sky were covered; afterwards variable till midnight. The prevailing clouds were cirrostratus, decaying clouds, and scud. Rain was falling at intervals throughout the day. A magnetic disturbance occurred between 7h. and 9h. p.m. The readings of the barometer had been gradually decreasing throughout the day; the minimum reading occurred at 6h. p.m., and was 28.839 in.
TUES.	Till 9h. a.m. none was shewn. Between 9h. a.m. and noon negative. From 1h. p.m. to 9h. p.m. positive and weak, and negative after 9h. with weak galvanic current.	Rain falling. Rain falling.	With the exception of a few small breaks in the N. the sky was overcast throughout the day, the class of cloud being cirrostratus and scud. Frequent showers of rain occurred between 9h. a.m. and 1h. p.m.; rain was again falling at midnight.
WED.	Positive throughout the day, except at 3h. a.m. when it was negative. Max. at 9h. a.m. and 9h. p.m.		The sky was overcast till 9h. a.m.; from this time till 1h. p.m. about three-fourths were covered; it was again overcast until 7h. p.m., and variable afterwards till midnight. The prevailing clouds were cirrostratus, cumulostratus, decaying clouds, and scud. Rain was falling from 4h. a.m. till 4h. a.m. A fine double corona was visible around the moon at 5h. 10m. p.m.
THURS.	Positive throughout the day. A max. from 9h. a.m. till afternoon, the tension being constant.		Overcast till 3h. 30m. a.m., from which time till 10h. p.m. the amount of cloud was very variable; afterwards the sky was cloudless till midnight. The prevailing clouds were cirrostratus, decaying clouds, and scud. A thin haze prevailed from 7h. a.m. till 7h. 30m. p.m. A few drops of rain fell at 4h. 40m. p.m.
FRI.	Positive at every examination through- out the day.		The sky was cloudless till 6h. 30m. a.m.; from this time till 6h. p.m. cirrostratus, cumuli, and decaying clouds prevailed, obscuring about three-fourths of it: from 6h. p.m. until 5h. p.m. it was cloudless, cirrostratus immediately afterwards came up from the N., covering the whole sky, and continuing until midnight. At 9h. 30m. p.m. an imperfect halo was observed around the moon.
SAT.	Positive throughout the day.	See General Remarks.	Overcast during the day until 10h. 30m. p.m., when the clouds became broken, and continued so till midnight: the prevailing clouds were cirrostratus and scud. Rain commenced falling at 1h. 30m. p.m., and continued till 5h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 43.8; and the mean reading at 7h. 30m. P.M., was 47.8; the mean readings at the Royal Observatory for the same times were 42.8 and 48.9 respectively.

† The direction of the wind for the week was variable; it was principally, however, from the N.N.W.

A TABLE OF  
Births and Deaths registered in the Metropolis,  
During the Week ending Saturday, April 18th, 1846.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 15,  
(ending Saturday, April 11th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

## CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds (continued):—	duration
M. 56, erysipelas, following upon a severe wound of the scalp, caused by a fall which he sustained on the 27th ult. (no inquest). The duration of illness should be stated not by date, but by the number of days, &c. which have elapsed.		In Guy's Hospital coach-painter, 43, inflammation of the veins of the arm, caused by his having divided an artery with a knife, while in a state of temporary insanity.... 4 days		In the Westminster Hospital, daughter of a costermonger, 8, burn of the face, neck, and arms—clothes took fire from a fire in the grate, when standing on the fender to reach the mantleself ..... 1 day	
M. 5, { fall on the head, ..... 3 weeks meningitis (no inquest)..... *		Drowning:—		In Bartholomew's Hospital, daughter of a carpenter and joiner, 8, accidentally burnt by her pinafore taking fire, whilst lighting a fire 36 hours	
M. 20, falling accidentally from the top of the foremast of Her Majesty's steam-vessel "Terrible"..... instant		Spinster, servant, 42, drowned by throwing herself into the Serpentine River, when of unsound mind ..... 8 minutes		In St. Thomas' Hospital, daughter of a waterman, 7, accidentally burnt by her pinafore catching fire ..... 2 days	
Police-constable, 32, inflammation of the brain, following a blow on the head, received Feb. 25, 1846, during a street disturbance while on duty, but not positively ascribable to the blow.		Master mariner, 30, found dead, without marks—apparently drowned.		In Guy's Hospital, daughter of a journeyman hatter, 6, accidentally burnt by her clothes taking fire, while lighting some net at a candle .....	
F. newly born (parents unknown), injury of the head soon after birth, wilfully inflicted by some person or persons unknown—found dead in the Regent's Canal.		Stoker, 25, accidentally drowned in the River Thames, at Woolwich.		In Guy's Hospital, daughter of an engineer's labourer, 6, accidentally burnt by her pinafore taking fire ..... about 4 hours	
Apprentice to a blacksmith, 14, erysipelas and gangrene of the leg and scrotum, following a bruise of the toe from an iron wheel falling upon it ..... 15 days		F. unknown, about 29, found dead in the River Thames, off Woolwich.		Son of a clerk to a publisher, 16, accidental burn—was in bed when the curtains caught fire from a candle. .... 48 hours	
A baker, 31, erysipelas of the face extending to the brain, from injuries supposed to have been inflicted during a quarrel..... 2 weeks		M. 33, drowned in the River Thames, by falling overboard from the hull.		M. 2, accidentally burnt by the clothes taking fire from a fire in a grate ..... 8 days	
In Guy's Hospital, policeman, 34, fracture of the skull by a chimney-pot being thrown at him in Tinder-box-alley, Deptford (p.m.).. 2 weeks		Hanging and Suffocation:—		A shoemaker, two sons, and a daughter, aged respectively 31 years, 7 years, 1 year, and 4 years, suffocation by smoke in a burning house, 77, Crawford-street—how the fire originated unknown.	
		Brass founder, 20, executed.		In Guy's Hospital, son of a cab proprietor, 3, accidentally scalded by falling into a pot of hot water .....	
		Widow of a water-gilder, 44, banged herself—state of mind unknown.		Son of a latb-render, 1, scalds by upsetting accidentally a coffee pot .....	27 hours
		M. 72, hanged himself in a temporary state of insanity.			
		M. 2 mon., accidentally suffocated while lying in bed near the mother.			
		Burns and Scalds:—			
		In Westminster Hospital, son of a mason, 4, burn of the arms and body—clothes took fire probably when playing with the fire .. 7 days			

## CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 32, hæmorrhage from rupture of a blood vessel in the lungs—occasional cough—but no previous illness		M. 75, natural death from diseased heart .... sudden		M. 30, mesenteric disease and chronic inflammation of the peritoneum ..... 3 months	
M. about 53, natural—disease of the head—no medical treatment .....		F. 56, natural death—sprains and inflammation of the stomach .....	*	M. 22, consumption .....	*
M. 57, natural—head affection—found insensible ..... 5 hours previously		M. 4 mon., found dead without marks—convulsions .....	*	M. 20, erysipelas of the head and neck ..... 4 days	
		M. 74, natural death from apoplexy .....	sudden	The last three were convicts at Woolwich.	
		F. 11 weeks, found dead—convulsions .....	*	F. 62, palpitation of the heart.....	*

## CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 10 mon., natural—no medical attendant.		F. 67, natural—found in her chair insensible, and died in ..... 24 hours		F. 31, disease of the heart .....	instant
F. 50, natural—fell down in her garden and expired ..... in 10 minutes		M. 9 mon., natural, not one minute's previous illness		M. newborn, found dead in the River Thames, off Woolwich.	
M. 69, natural—dropped on the street, and died instantly		M. 9 weeks, found dead.		M. 45, natural causes .....	*
F. 61, natural—difficulty of breathing—no medical treatment .....	*	F. 1 day, found dead.		M. 77, old age .....	*
		F. 8 mon., found dead.		F. 77, natural causes.....	*
		M. 80, natural decay from age .....	instant		

## THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD).—AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:—	duration	Middlesex H.:—No deaths registered.	duration	Small Pox H.:—	duration
F. 36, disease of the rectum—stricture and chronic inflammation .....	*	University College H.:—No deaths registered.		M. 22, small pox—natural—confluent ..... 11 days	
F. 15, erysipelas and fever .....	*	Fever H.:—		King's College H.:—	
F. 29, fever.....	*	M. 41, { fever..... *		M. 44, bronchitis (post mort.) .....	4 days
Westminster H.:—		in hospital 37 days from St. George's, Southwark.		F. 40, softening of brain .....	4 months
M. 53, fever—gastro-intestinal..... 30 days		fever..... 14 days		Bartholomew's H.:—	
F. 50, cerebral abscess—phlebitis, internal jugular .....	*	M. 22, { pleuritis ..... 4 days		M. 42, disease of the heart .....	*
Charing Cross H.:—		in hospital 6 days from White-Cross-street.		M. 48, phthisis .....	*
M. 22, inflammation of the pia mater of the brain (post mort.) .....	*	F. 24, { fever—pneumonia .....	*	F. 15, disease of the heart .....	*
F. 50, typhus fever..... 3 weeks		in hospital 55 days from Wandsworth.		F. 28, fever.....	*
		F. 39, fever..... 10 days			

London H.:	duration	Gay's H. (continued):	duration	St. Thomas' H. (continued):	duration
M. 29, exhaustion from enlarged glands of the neck (post mort.)	9 days	M. 20, phthisis	*	F. 61, { femoral rupture ..... 2 years strangulated ..... 5 days operation—adherent sac—never rallied—no inflammation of peritoneum.	*
M. 17, synochus	22 days	F. 40, diseased lungs, heart, liver; dropsy	*	M. 7, { serofula ..... ulceration of arm ..... upwards of 2 years	*
F. 60, chronic hepatitis	3 months	F. 7, abdominal tumour	*		
F. 73, bernie (post mort.)	2 days	M. 37, consumption	*		
F. 49, chronic bronchitis	3 months	F. 37, tumour of the uterus	*		
Gay's H.:		St. Thomas' H.:			
M. 24, diseased kidneys—dropsy	*	F. 40, phthisis	7 months		
		M. 28, phthisis (post mort.)	20 months		

## DISTRICTS OF ST. PANCRAS, ISLINGTON, HACKNEY, AND ST. GILES:—

CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

Tottenham:	duration	The Regent's Park (continued):	duration	Hackney (continued):	duration
M. 6, { congestion of brain and mesenteric disease ..... typhoid fever and atrophy ..... 10 days	*	M. 5, hooping cough and inflammation of the lungs	*	M. 4 mon, hydrocephalus	*
M. 30, pneumonia	*	F. 3, mesenteric disease	2 months	M. 27, phthisis	4 years
M. 67, chronic bronchitis	*	F. 69, { granular degenerative kidneys ..... valvular disease of heart ..... 16 hours	*	F. 1, { hooping cough ..... pneumonia ..... 1 month	*
F. 27, consumption (not certified)	*	F. 26, phthisis	*	F. 64, natural decay (not certified)	*
F. 1, pneumonia	6 days	F. 2, { hooping cough ..... 2 months broncho-pneumonia ..... 4 days	*	Stamford Hill:—	
F. 76, general dropsy	*	F. 54, cancer of the left breast	6 weeks	M. 1, hooping cough	14 days
F. 60, general debility	*	F. 5 mon, { bronchitis ..... apbtha ..... *	*	F. 80, { influenza ..... 2 weeks bronchitis ..... 2 weeks	*
F. 63, natural decay	*			F. 74, apoplexy	24 hours
F. 45, phthisis	*			South Hackney:—	
Gray's Inn Lane:—				M. 35, hereditary pulmonary consumption	*
M. 7 hours, convulsions	*	Kentish Town:—		M. 20, phthisis	*
M. 87, effusion on the brain—paralysis	*	M. 19, chronic abscesses	4 years	M. 10 mon, hydrocephalus (post mort.)	7 days
M. 3, hydrocephalus	*	M. 1, measles—influenza (not certified)	*	F. 5 weeks, debility, with convulsions from the birth (no regular medical attendant—not certified)	*
M. 21, pleurisy	*	M. 2, congestion of lungs	3 days	F. 35, diseased lungs	2 years
M. 11 mon, water in the brain	7 days	M. 1, chronic hydrocephalus	*	F. 65, apoplexy	18 hours
M. 38, abscess of brain—in hospital 4 days	*	F. 1, inflammation of the brain	*	West Hackney:—	
M. 64, continued fever	15 days	Islington, West:—		M. 25, phthisis	18 months
M. 56, phthisis	18 months	M. 59, phthisis	*	M. 22, { scrofulous habit ..... rheumatism ..... 4 years	*
F. 2, hooping cough	*	M. 1, congestion of the brain (not certified)	*	M. 2m, jaundice, inflammation of the lungs, p.m.	3 weeks
F. 2 weeks, convulsions	*	M. 81, bronchitis—pleuritis	14 days	F. 68, { ague ..... 1 month dropsy of the chest ..... 1 week	*
F. 7 mon, pneumonia	about 6 days	M. 5 mon, { arachnitis ..... 14 days serous effusion at the base of the brain (post mort.) ..... 5 days	*	decay of nature	*
F. 56, erysipelas	*	M. 3, { measles ..... 6 weeks before hooping cough ..... 1 month	*	F. 46, { fever ..... 2 months peritonitis ..... 1 month	*
F. 2, phthisis	2 years	M. 37, phthisis	1 day	abscess in the right iliac fossa, followed by gangrene	2 months

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Slightly positive at each examination throughout the day. There was no ex- amination during the time of rain falling.	} See General Remarks.	Cirrostratus, cumuli, and fleecy clouds covered the greater part of the sky during the morning and afternoon. It was nearly cloudless for a short time in the evening, but became overcast before 8h. p.m., at which time rain was falling.
MON.	Negative till after 2h. a.m., and positive and weak after that time throughout the day.	} See General Remarks	The sky was about one-fifth covered with cloud at 5h. 20m. a.m.; with that exception it was mostly overcast until noon—variable until 5h. 30m. p.m., when it became clear, and continued so until midnight. Rain was falling between 6h. and 2h. a.m., and in occasional slight showers about noon. The magnets were disturbed during the evening.
TUES.	Positive between 9h. a.m. and 3h. p.m. None being shewn at any other times.	} See General Remarks.	The sky became overcast soon after 6h. a.m., and it was clear at 5h. a.m., but continued so only for a short time. It was afterwards overcast until 9h. p.m., and occasionally clear from that time till midnight. Rain was falling occasionally from 1h. 30m. to 6h. p.m.
WED.	None was shewn till after 9h. a.m. Pos- itive afterwards throughout the day, and strong between noon and 9h. p.m.	} See General Remarks.	The sky was overcast throughout the day. A thin rain was falling occasionally from 7h. 30m. a.m. to 2h. p.m., and also at midnight. The magnets were disturbed from 7h. 20m. p.m. to 8h. 27m. p.m.
THURS.	Slightly negative at 9h. a.m., and positive after that time. A max. at 9h. p.m.	} See General Remarks.	Cirrostratus and scud covered the sky until 3h. p.m., with one exception, viz., at 9h. a.m., when the sky was about one-half covered. The sky was nearly cloudless from 3h. 20m. p.m. till 6h. p.m., when it became overcast, and continued so during the remainder of the day. The magnets were disturbed from 6h. 20m. p.m. till 9h. 50m. p.m.
FRI.	Positive till 5h. p.m., and none was shewn after that time.	} See General Remarks.	The sky was covered with cirrostratus and scud throughout the day, with the exception of a few breaks a little before and after noon. A thin fog prevailed during the morning.
SAT.	A little positive at 2h. p.m., and at mid- night; none was shewn at any other times.	} See General Remarks.	The sky was covered with cirrostratus and scud throughout the day, except for about a quarter of an hour, between 8h. 45m. and 9h. p.m., when it was nearly cloudless. A thin rain was falling from 5h. a.m. to 6h. 60m. a.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 50.1; and the mean reading at 7h. 30m. P.M., was 51.2; the mean readings at the Royal Observatory for the same times were 48.4 and 49.6 respectively.

† The direction of the wind for the week has been very variable.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, April 25th, 1846.*

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 16,  
(ending Saturday, April 18th).

CORONERS' RETURNS OF DEATHS BY VIOLENCE.

Fractures and Contusions :—	duration	Fractures and Contusions (continued.) :—	duration	Hanging and Suffocation :—	duration
In Bartholomew's Hospital, carpenter, 58, fracture of his skull by accidentally falling from a ladder, in consequence of giddiness of his head, at St. John's Street, Clerkenwell . . . . .	a few minutes	F. 3 days, extravasation of blood on the brain produced by pressure on the head in a difficult labour.		Coachman, 23, suicide by hanging in a stable of Clifton House, Old Brompton—of unsound mind.	
German Count, 77, fracture of the neck of the thigh bone, by slipping down in his own room	13 days	Son of a carpenter, 1, mortification of the lower jawbone, from an injury while on the floor—nature of the injury undiscoverable . . .	6 weeks	Carpenter, 47, suicide by hanging—of unsound mind from habitual drunkenness—second attempt at hanging.	
irritative fever ( <i>no inquest</i> ) . . . . .	8 days	F. 73, fracture of the neck of thigh bone ( <i>no inquest</i> ) . . . . .	13 weeks	M. 53, hanged himself in his privy, in a temporary state of insanity.	
Labourer, 54, inflammation following fractured ribs and other injuries—brickwork and earth fell upon him, when digging in the yard of the Sahloniere Hotel, Leicester Sq. *		Wounds :—		Daughter of a servant, newly born, suffocation in a privy, where it was wilfully forced into the soil by the mother, Mary Ann Martha Hicks, the moment after birth ( <i>post mort.</i> )—verdict of manslaughter against the mother.	
In Bartholomew's Hospital, daughter of a shoemaker, 4, accidentally run over by an omnibus, whilst running across the carriage way in the Old Bailey—causing fracture of the skull . . . . .	instantner	Engineer, 53, cutting his throat with a knife. . .	24 hours	Poison :—	
In Bartholomew's Hospital, labourer, 17, fracture of his skull by a kick from a mare at Kingsland ( <i>post mort.</i> ) . . . . .	1 month	Drowning :—		Porter, 45, irritant acid and metallic (vermin) poison, drunk from a bottle in ignorance of its nature . . . . .	5 days
Hackney cab proprietor, 34, accidentally thrown out of his chaise by its coming in contact with a post at the corner of Dean Street, the horse having run away—injury of the brain . . . . .	17 days	Cook, 41, drowning—fell into the Thames from a platform connecting two floating barges (part of Hungerford pier). The staples fastening the platform to the barges had been drawn out by the motion of the barges and platform. . . . .	15 min.	Son of a velvet painter, 5 days, accidental from an overdose of syrup of poppies, given to cure a cold, and not to destroy life . . . . *	
Son of a baker, under 1, fracture and other injuries of the head, by the overturning of a cart in the Bridge Road, Lambeth. . . .	3 minutes	Government clerk, 49, suicide by drowning during depression of mind after intoxication—a drunkard 10 years.		M. 2, accidentally drinking essential oil of almonds. . . . .	20 min.
M. 45, wilfully murdered by John Welch—blows on the head with a tailor's sleeveboard *		M. 65, drowned by accidentally falling into the Surrey Canal.		Means not stated :—	
M. 61, concussion of the brain ( <i>no inquest</i> ) . .	5 weeks	F. 29, suicide by drowning herself in the water of the Surrey Canal, in a temporary fit of mental derangement.		F. newly born, wilfully murdered by some person or persons unknown—found in a ditch.	
		M. 24, suicide by drowning in temporary derangement.			
		M. 8, suffocated by being accidentally drowned in a pool of water.			

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

King's College H. :—		Bartholomew's H. (continued) :—		St. Thomas' H. (continued) :—	
M. 62, phlebitis after amputation of the leg ..	•	F 53, anasarca—emphysema of the lungs—tubercles in the upper part of the left lung, and middle part of the right—small cavities on both sides, ill .....	1 year	F. 19, { gastritis .....	4 months
M. 2, { erysipelas after castration (post mort.) ..	•	F. 23, diffused phlegmoid inflammation .....	•	(post mort.) ..	2 days
Bartholomew's H. :—		London H. :—		Dreadnought H. :—	
M. 60, phthisis .....	•	M. 33, consumption .....	•	M. 24, { erysipelas of face and head .....	13 days
M. 75, dropsy—disease of the heart .....	•	M. 27, apoplexy .....	3 days	{ cerebral complication .....	9 days
{ bronchitis—3 large cavities in the upper part of the left lung—emphysema of the rest of the lung—thickening of the mitral and aortic valves, (post mort.) ill .....	3 years	Guy's H. :—		{ partial consolidation of both lungs—	•
M. 35, { pleurisy .....	•	M. 14, pleurisy .....	•	{ arachnoid inflammation (post mort.) ..	•
{ pressure on the brain resulting from syphilis .....	•	M. 35, { syphilis .....	•	{ pleurisy .....	14 weeks
M. 46, peritonitis (post mort.) ..	•	{ diseased liver .....	•	{ ascites .....	40 days
M. 17, mental imbecility after rheumatic fever ..	•	M. 29, { diseased kidneys .....	long standing	{ tubercular deposit in right lung and peritoneum—effusion into left pleura (post mort.) .....	•
M. 54, bronchitis .....	•	{ hæmatemesis .....	•	{ bubo .....	15 weeks
F. 31, erysipelas .....	•	St. Thomas' H. :—		{ erysipelas of scrotum and groin .....	11 weeks
		M. 26, diseased kidneys and dropsy—bad six months .....	duration uncertain	{ inflammation of the left hip-joint (p.m.) ..	9 weeks
				{ pleurisy with extensive effusion .....	47 days
				{ paracentesis thoracis .....	20 days
				{ peritonitis (post mort.) .....	17 days

## DISTRICTS OF THE STRAND, HOLBORN, ST. JAMES, CLERKENWELL, AND ST. LUKE, MIDDLESEX :— CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

St. Clement Danes :—		St. Andrew Eastern :—		Goswell Street, Clerkenwell :—	
M. 22, disease of the lungs .....	1 year	M. 75, age and debility .....	•	M. 44, phthisis .....	6 months
M. 1, hydrocephalus—convulsions .....	•	M. 81, decay of nature (no medical attendant) ..	•	M. 2, whooping cough and bronchitis .....	3 weeks
M. 2 mon., convulsions .....	•	F. 1 day, convulsions .....	•	M. 32, phthisis .....	3 months
F. 48, ascites .....	•	F. 40, paralysis .....	•	F. 50, paralysis .....	7 days
F. 73, old age (not certified) ..	•	F. 50, apoplexy .....	•	F. 35, hydrothorax .....	3 months
F. 4, mesenteric disease .....	•	F. 60, bronchitis .....	•	{ hypertrophy of heart .....	12 months
St. Mary, Strand :—		F. 5, fever .....	•	{ thickening of mitral valves .....	•
M. 36, phthisis pulmonalis .....	3 months	Saffron Hill, Hatton Garden, and Ely Rents :—		{ pericarditis of recent date (post mort.) ..	•
M. 71, { hypertrophy of the heart .....	•	M. 1, fits .....	3 weeks	F. 30, phthisis .....	13 months
{ chronic inflammation of the liver and stomach .....	•	M. 71, senile decay—paralysis .....	3 weeks	F. 39, phthisis .....	6 months

M. 1, pneumonia—congested lungs .....	9 days	{ gangrene .....	several weeks	M. 18, fever .....	•
M. 76, dry gangrene (gangræna senilis) .....	4 months	F. 9 mon., { abscess and gangrene of the neck ..	10 days	F. 74, dropsy (not certified) .....	•
M. 3 mon., mesenteric disease .....	•	{ convulsions .....	2 days	F. 1, convulsions and fits .....	•
F. 72, natural decay (not certified, no medical attendant) ..	•	F. 3 mon., hydrocephalus .....	•	Whitecross Street :—	
F. 45, phthisis .....	•	Amwell, Clerkenwell :—		M. 46, fever .....	9 days
F. 46, bronchitis .....	14 days	M. 5, asthma of long standing .....	•	M. 24, small pox .....	10 days of eruption
St. George the Martyr and St. Andrew Western :—		M. 2 mon., phlegmonous erysipelas of leg ..	8 days	F. 14 days, bronchitis .....	3 weeks
M. 1, dentition and convulsions .....	8 days	M. 38, brain fever—apoplexy .....	•	Old Street :—	
M. 36, bronchitis .....	5 months	M. 35, phthisis .....	•	M. 6 mon., inflammation of the lungs .....	1 week
M. under 1, convulsions .....	•	M. 9 weeks, convulsions .....	•	M. 7 mon., dentition—bronchitis .....	10 days
M. 5, effusion on the brain .....	8 days	F. 1, teething .....	•	F. 1, inflammation of the lungs .....	14 days
F. 51, bronchitis .....	7 days	F. 38, phthisis .....	•	City Road :—	
F. 35, phthisis pulmonalis .....	5 months	F. 75, apoplexy .....	2 hours	M. 8 days, convulsions .....	•
F. 2, pertussis .....	14 days	F. 34, emphysema (post mort.) .....	5 months	M. 3 hours, convulsions .....	•
				F. 76, natural decay ..	•
				F. 4, scarlatina .....	4 weeks
				F. 37, { chronic peritonitis .....	long standing
				{ obstruction in bowels (post mort.) ..	7 days

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, MALFORMATION, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, AND INTemperance, ETC.

Small Pox :—		Typhus (continued) :—		Diabetes :—	
M. 6 weeks, small pox, natural—not vaccinated, 7 days ..	•	F. 1, inflammatory fever .....	8 days	F. 32, diabetes .....	•
M. 21, confluent small pox (after vaccination, at the age of 3 months) .....	16 days	M. 23, nervous fever .....	•	Stone :—	
F. 22, small-pox (not vaccinated) .....	6 days	F. 49, typhus .....	6 days	F. (age not stated), renal calculi .....	4 months
F. 9 mon., small-pox (first attack—never vaccinated) ..	14 days	F. 50, { fever .....	2 days	Childbirth :—The time elapsing from commencement of labour to death should invariably be returned.	
M. 1, varicella—convulsions .....	•	M. 55, typhus fever .....	3 days	F. 35, { childbirth .....	3 days
See above.		M. 2, synchus .....	14 days	{ puerperal peritonitis .....	3 days
Typhus :—		F. 42, typhus .....	2 weeks	F. 37, puerperal fever .....	•
F. 25, { typhus fever .....	19 days	M. 48, typhus fever, followed by jaundice ..	5 weeks	F. 26, puerperal peritonitis .....	7 days
{ bronchitis .....	4 days	See above.		{ puerperal convulsions .....	•
M. 10, febris typhoides .....	10 days	Other cases of Fever, not assigned to Typhus in abstract :—		F. 28, { phlegmasia alba dolens .....	•
M. 18, { fever .....	•	F. 4, abscess and fever .....	9 months	{ effusion on the brain .....	2 months
{ pneumonia (post mort.) .....	7 days	F. 5, infantile remittent fever .....	4 months	F. 40, flooding .....	•
F. 45, monomania—low nervous fever ..	•	M. 1, infantile remittent fever .....	•	{ puerperal fever (10th child) .....	4 days
F. 55, fever .....	•	F. 2, intermittent, typhoid .....	3 weeks	{ poison in the blood—no inflammation (post mort.) ..	•
M. 16, fever .....	•	M. 56, { intermittent fever .....	4 months	{ phthisis .....	several months
M. 4, typhus fever .....	1 month	{ disease of the bowels .....	•	{ rheumatic gout .....	•
F. 7, fever .....	3 weeks	M. 54, { chronic pulmonary catarrh .....	3 weeks	{ purpuration .....	24 days
M. 6 mo., fever .....	3 days	{ fever .....	11 days	assigned in abstract to phthisis.	
M. 78, fever .....	4 days	M. 1, { remittent fever .....	24 hours	Delirium tremens and Intemperance :—	
M. 17, { typhus .....	14 days	F. 3, jaundice; previously fever .....	•	M. 38, delirium tremens .....	•
{ gastritis .....	3 days	M. 34, { brain fever .....	•	F. 49, { delirium tremens .....	6 weeks
M. 1, fever and inflammation .....	•	{ chronic hepatitis with atonic dyspepsia ..	•	{ intemperance .....	•
F. 2, fever—bronchitis .....	about 1 month.	Syphilis :—		{ disease of the digestive organs, from habitual excess in drinking ..	•
M. 9, typhus fever .....	1 month	F. 9 weeks, syphilis (post mort.) .....	from birth	{ thrush .....	6 months
F. 20, typhus fever .....	7 days	M. 34, { syphilis .....	8 days	See above.	
F. 43, nervous fever .....	•	{ erysipelas .....	•	Tapping for Ascites :—	
F. 35, low fever .....	21 days	See above.		{ diseased aortic and mitral valves of the heart .....	4 years
F. 4, { fever .....	•	Malformation :—		{ ascites; tapped 9 times .....	•
{ pneumonia .....	8 days	F. 6 days, { spina bifida .....	congenital		
F. 66, febris .....	•	{ convulsions .....	6 days		
F. 3, { fever .....	24 hours	M. 2 mon., cerulean disease .....	•		
{ convulsions .....	10 hours				

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

F. 2, tabes mesenterica—fainting .....		M. 64, asthma .....		M. 9 mon., dentition—convulsions .....	
{ pneumonia of right lung .....	4 days	F. 47, ovarian dropsy .....	•	{ convulsions .....	about 3 hours
M. 59, { hepatization of left lung and absorption through adhesion and pressure of part of one of the ribs long standing ..	•	F. 24, peritonitis acute .....	6 days	M. 1, { convulsions .....	2 months
F. 63, cancer of the pylorus, peritoneum, and omentum .....	•	F. 28, phthisis—vomica in both lungs, especially the right .....	3 months	F. 53, cancer of the womb .....	several years
F. 16, phrenitis .....	7 days	{ pertussis .....	in April, 1845	F. 12, disease of the heart—bronchitis ..	•
F. 9, { softening of brain—effusion into the ventricles .....	•	M. 6, { pneumonia .....	4 weeks	{ rare disease—constriction of duodenum 3 in. below the insertion of the hepatic duct, 8 wks. constant vomiting—ossification of the aorta 1 inch above the bifurcation of the iliac arteries—had several attacks of gallstones ..	•
{ paralysis .....	8 days	F. 63, ovarian disease, with encysted dropsy (ascertained by post mort. examination), proving fatal by exhaustion .....	about 7 years	F. 92, { disease of the liver .....	•
F. 39, rupture of the vena cava .....	9 hours	F. 37, { flaccid heart .....	60 hours	{ dropsy .....	2 months
M. 46, fluid in the brain .....	•	{ diseased liver .....	duration uncertain		

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,  
During the Week ending Saturday, 25th April, 1846.

Day.	Phases of the Moon	Mean height of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day, on an average of 25 years.	WIND						Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in Inches, read at 9 o'clock the next morning

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Slightly positive at each examination.	See General Remarks.	With the exception of a few small breaks in the clouds at various times, the sky was covered throughout the day with cirrostratus and scud. From 10h. a.m. to 8h. p.m. occasional gusts of wind to 2lb. on the square foot occurred.
MON.	Positive throughout the day: the tension weak from 8h. a.m. to 2h. p.m., and strong at other times. The max. at 6h. a.m., and a max. at 7h. p.m.	See General Remarks.	Shortly after midnight the sky became cloudless for a short time. Before 1h. a.m. clouds rapidly came up from the N., and shortly afterwards every part of the sky became covered. It remained in this state till 5h. a.m. From the latter time until 10h. a.m. about one-third of the sky was covered with clouds, principally cirri and cirrocumuli. From 11h. a.m. to 8h. p.m. three-fourths of the sky were covered with cumuli, cirrostrati and scud. At 9h. p.m. the sky became cloudless, and remained so until midnight. Frequent showers of hail fell during the morning.
TUES.	Positive throughout the day; the tension weak from 11h. a.m. to 5h. p.m., and again at midnight; it was strong at all other times.	See General Remarks.	The sky remained cloudless until 5h. a.m., when a dense fog arose, and continued to 10h. a.m. From 11h. a.m. to 6h. p.m. the sky was covered with cirrostratus and scud. At 7h. p.m. the clouds became extensively broken, and from that time until midnight their amount was small.
WED.	None was shewn till 8h. a.m. Positive with strong tension after this time.	See General Remarks.	About one-half of the sky was covered with cirrostratus and vapour until 10h. a.m.; but before 11h. a.m. every part was covered. It remained so until 6h. p.m. During the remainder of the day one-half of the sky was covered with a thin cirrostratus.
THURS.	Positive all day; the tension strong all day. The maxima occurred at 9h. a.m. and 9h. p.m.	See General Remarks.	With the exception of a few fragments of cirrostratus near the horizon, the sky was cloudless until 6h. a.m. From this time until 8h. p.m. a large portion of the sky was covered with cumulostrati, cirrostrati and scud. At 9h. 30m. p.m. the clouds suddenly cleared off, but before 11h. it again became overcast, and remained so until midnight.
FRI.	Positive till 2h. a.m. Negative: tension strong: sparks abundant; a galvanic current between 2h. and 8h. a.m. Positive from 9h. a.m. till midnight.	See General Remarks. Heavy rain falling. See General Remarks.	Overcast until 7h. p.m. The quantity of rain recorded (0°59 in.) fell between 3h. a.m. and 6h. 50m. a.m. At 9h. p.m. the sky became cloudless, and remained so until midnight.
SAT.	Positive till afternoon. Negative from 6h. 48m. p.m. to 2h. p.m. The tension was very strong: sparks abundant: galvanic currents were frequent. Positive from 4h. p.m. till 7h. p.m., and none was shewn after this time.	See General Remarks. Thunder was heard and rain was falling, but not heavily. See General Remarks.	Cloudless until 2h. a.m.: shortly after this time the sky became overcast, and a slight rain fell for half an hour. A dense fog arose at 6h. 30m. a.m., and continued for upwards of an hour. During the remainder of the day the sky was covered with cumulostrati, cirrostrati, and scud. Thunder was heard at 6h. 48m. p.m., and a shower of rain fell shortly afterwards.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 41°1; and the mean reading at 7h. 30m. P.M., was 48°8; the mean readings at the Royal Observatory for the same times were 40°3 and 47°0 respectively.

† The mean direction of the wind for the week is N.E., but variable.

*During the Week ending Saturday, May 2nd, 1846.*

\* The ages of 2 persons, whose deaths are ascribed respectively to *disease of the brain* and *violence*, are not stated.

DISTRICTS of the Metropolis, (34 in number, and comprising 129 Registrars' Districts)		Area in square Miles	Population Enu- merated in 1841	Weekly Average derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846. ## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 17, (ending Saturday, April 25th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, *in years, except when otherwise stated.* The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
Wife of a gardener, 57, accidental death by a fall down stairs, and dislocated ankle . . . *		M. 10, { disease of the spine from injury (how caused not known).....9 years pneumonia (no inquest).....about 10 days		Sea-boy, about 15, found dead in the River Thames.	
In-pensioner of Chelsea Hospital, 58, injuries of the chest from being run over by a cart, on March 30, at Hammersmith, while intoxicated.		Wounds:—		Joiner, 19, accidentally drowned by a fall from a steam-boat.	
In Guy's Hospital, soap-boiler, 58, some internal injury, caused by a cart wheel passing over his chest in Friar-street, Southwark-bridge-road .....	4 days	In St. George's Hospital, labourer, 33, cut finger; diffuse cellular inflammation of arm and chest (no inquest) .....	*	Suffocation:—	
In Guy's Hospital, omnibus driver, 46, fractured ribs by being thrown from an omnibus in the Walworth-road, from the horses taking fright .....	40 hours	Solicitor, 39, wound in the heart, caused by a bullet from a pistol—shot himself—insane .....	*	Daughter of a commercial traveller, 3 weeks, suffocated in bed accidentally.	
Labourer, 81, apoplexy, after a fall down stairs $\frac{1}{2}$ hour		Drowning:—		M. 1 month, suffocation, supposed from pressure against the mother's breast—found dead in bed.	
In St. Thomas's Hospital, labourer, 20, fracture of his skull by being struck on the head with a capstan bar, at Cross-lane, Tower-street .....	nearly 1 hour	Wife of a shoemaker, 26, temporary insanity—suicide by drowning in the Serpentine River, about 5 minutes		Burns and Scalds:—	
		F. 20, drowned—unknown by what means the body got into the water.		In Guy's Hospital, daughter of a labourer, 4, burnt by her clothes taking fire, whilst playing with fire at Edward-street, Dockhead. . . 2 days	
		M. 24, accidentally drowned by falling from a barge.		In Guy's Hospital, daughter of a labourer, 7, burnt by her pinafore taking fire, whilst taking a kettle off the fire at Stockwell-street, Old Kent Road .....	19 hours
		Sea apprentice, 17, found dead without marks, apparently drowned.			

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. about 60, angina pectoris—supposed disease of the heart .....	20 min.	F. 24, extravasation of 1½ oz. of blood under the left ventricle of the brain, from softening of its floor .....	1 hour	F. 88, natural death—old age—fit .....	*
F. 26, { bearing an 8-months' child, stillborn. hemorrhage during labour .....	$\frac{1}{2}$ hour	F. 61, natural death—apoplexy .....	*	M. 6 mon., convulsions .....	*
		M. 37, natural death from diseased heart ....	*	M. 3 mon., natural—most probably from a diseased condition of brain.....	1 week

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 24, natural death—dropped down and expired instantly		M. 74, natural—no previous confinement from illness.		M. 45, found dead on a wharf, amongst some mats, without marks of violence.	
F. 82, natural—no medical treatment.....	sudden			M. 39, natural death.....	*

### THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:—	duration	Middlesex H.:—	duration	Fever H.:—	duration
M. 27, phthisis .....	*	{ malignant disease of knee.....6 months amputation of thigh) .....	4 months	M. 28, { fever.....13 days in hospital 8 days—from St. George's, Hanover-square.	
M. 36, consumption .....	*	recurrence of disease.		F. 36, { fever.....9 days in hospital 4 days—from Bermondsey.	
M. 50, renal dropsy—Bright's disease (p.m.) ..	*	M. 28, erysipelas of arm and chest .....	4 days	F. 22, { fever..... in hospital 6 days—from Gray's-inn-la.	
M. 60, phthisis—ulceration of larynx—granular kidneys (post mort.) .....	*	F. 62, hemiplegia .....	1 year	Small Pox H.:—	
M. 30, pericarditis—pleuro-pneumonia (p.m.) ..	*	University College H.:—	duration	F. 18, small-pox, natural, confluent.....	10 days
M. 35, delirium tremens .....	*	M. 42, { Bright's disease .....	*	F. 19, small-pox, natural, confluent.....	11 days
F. 19, chronic peritonitis .....	*	{ anasarca—ascites .....	6 months	King's College H.:—	
F. 18, encysted disease in the cellular tissue behind the peritoneum, surrounding the great vessels of the abdomen, and reaching into the duodenum (post mort.).....	*	apoplexy—paralysis .....	9 days	M. 12, fever and inflammation of the brain, (post mort.)..	2 weeks
F. 28, low peritonitis after lying-in—inflammation of the left Fallopian tube (p.m.) ..	*	F. 65, { effusion of blood in the substance of the brain, and over both hemispheres, (post mort.) ..	*	M. 48, erysipelas of head .....	6 months
Westminster H.:—		cancer, involving pancreas—cancer of liver .....	*	M. 58, granular disease of the kidneys (p.m.)..	6 months
M. 33, continued fever .....	7 days	F. 43, { liver .....	*	{ chimney-sweep's cancer .....	*
Charing Cross H.:—		ascites .....	5 months	operation.....	4 days
F. 70, abscess in the neck producing decline ..	*	F. 25, phthisis pulmonalis .....	2 years	Bartholomew's H.:—No deaths registered.	

THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (*continued*):—

<i>London II.</i> :—	<i>duration</i>	<i>Guy's II. (continued)</i> :—	<i>duration</i>	<i>St. Thomas' II. (continued)</i> :—	<i>duration</i>
M. 20, consumption . . . . .	8 months	M. 38, fever . . . . .	*	M. 24, { fever . . . . .	8 days
M. 35, consumption . . . . .	11 months	M. 37, bronchitis—(phthisis ?) . . . . .	*	{ pneumonia ( <i>post mort.</i> ) . . . . .	*
M. 39, { rheumatism . . . . .	5 weeks	M. 27, phthisis—pneumonia . . . . .	*	M. 66, hernia—operation . . . . .	*
{ delirium tremens . . . . .	6 days	F. 25, bronchitis . . . . .	*		
F. 44, { cancer uteri . . . . .	21 months	F. 11, fever . . . . .	*	<i>Dreadnought II.</i> :—	
{ general hypertrophy and dilatation of		M. 26, albuminuria—diseased heart . . . . .	*	{ phthisis . . . . .	3 months
heart ( <i>post mort.</i> ) . . . . . probably 18 months		M. 61, inguinal hernia—operation . . . . .	*	{ slightly scorbutic . . . . .	2 weeks
				{ disseminated tubercles in both lungs,	
		<i>St. Thomas' II.</i> :—		{ ulceration of larynx and small intestine,	
<i>Guy's II.</i> :—		M. 4, typhus, petechial . . . . .	*	( <i>post mort.</i> ) . . . . .	
M. 34, syphilis—phthisis . . . . .	*	F. 28, erysipelas . . . . .	*		
M. 36, chronic pleuripneumonia . . . . .	*	M. 40, { morbus cerebri . . . . .	several years	M. 23, { phthisis . . . . .	3 months
M. 40, phthisis . . . . .	*	{ anaurosis—paralysis ( <i>post mort.</i> ) . . . . .	*	{ milary tubercles throughout each lung,	
				{ cavities in each apex ( <i>post mort.</i> ) . . . . .	

DISTRICTS OF EAST LONDON, WEST LONDON, CITY OF LONDON, AND SHOREDITCH:—  
CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

St. Botolph:—	duration	North District (continued):—	duration	Hoxton Old Town:—	duration
M. 30, pulmonary apoplexy ( <i>post mort.</i> )	sudden	M. 5 mon., inflammation of the lungs	*	M. 53, paralysis	*
M. 1, { pneumonia	*	F. 60, phthisis	*	M. 62, suffocative bronchitis	*
dentition	*	F. 24, diseased trachea and lungs	*	F. 31, phthisis	5 months

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Slightly positive at each examination.	See General Remarks.	The sky was generally overcast until 8h. 20m. p.m., after which time the sky became clear, and remained so during the rest of the day. Rain was falling heavily before 9h. a.m., and there were occasional showers at various other times during the day.
MON.	Positive and weak until 3h. a.m. Positive and weak from 7h. a.m. to 6h. p.m. Nothing was shewn at any other time.	See General Remarks. } See General Remarks	The sky was cloudless until 6h. a.m., when clouds came up from the N.N.W., and covered about one-half of the sky. It was mostly overcast during the remainder of the day. The prevailing clouds were cumulostrati and large masses of white scud.
TUES.	The apparatus was out of order evening,	through an accident, after Monday April 27th.	Overcast until 7h. a.m.; when the clouds began to break in the east, and the sky was about one-fifth covered with cloud until 1h. 20m. p.m., when it became overcast, and continued so till just before midnight, at which time it was cloudless. Rain was falling occasionally during the evening.
WED.			Cloudless till noon; from that time until 5h. 30m. p.m. it was about one-third covered; it was afterwards cloudless till 7h. 30m. p.m., when it became overcast, and continued so during the remainder of the day.
THURS.			The sky became cloudless soon after 6h. a.m., and continued nearly so until 8h. a.m.; it was generally overcast during the remainder of the day.
FRI.			The sky was covered with cirrostratus and scud throughout the day.
SAT.			The sky was overcast throughout the day, with the exception of a few breaks about the Zenith, which occurred between 1h. 30m. and 4h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 45.0; and the mean reading at 7h. 30m. P.M., was 51.2; the mean readings at the Royal Observatory for the same times were 43.6 and 50.0 respectively.

† The mean direction of the wind for the first four days was N., and during the last three days W.S.W.

*During the Week ending Saturday, May 9th, 1846.*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.			In the morning three-fourths of the sky were covered with cirrostrati, fleecy clouds, and a few cumuli. In the afternoon a few cirri were visible, and the amount of cloud was small.
MON.			Overcast with slight exceptions to 9h. a.m.; from that time until 1h. p.m. a large portion of the sky was free from cloud; but before 3h. p.m. cirrostratus and scud again collected, and obscured the sky during the remainder of the day. From 6h. 30m. p.m. to 2h. p.m. frequent gusts of wind to 23lbs. pressure on the square foot occurred in the evening—the magnets were disturbed.
TUES.			The sky was principally covered with a thin cirrostratus till 5h. a.m.; from that time to 4h. p.m. massive cumuli and cumulostrati prevailed. From 5h. p.m. to midnight the sky was overcast with cirrostratus and dark scud. A light rain fell at 6h. p.m.
WED.	At 10h. 15m. a.m. the apparatus was raised after repair, and immediately positive electricity was shewn. From 10h. 20m. a.m. to 6h. 36m. p.m. negative: sparks abundant, and galvanic currents were shewn. From 2h. 23m. p.m. to 3h. p.m. negative and active—sparks abundant.	Rain falling. See General Remarks.	The prevailing clouds throughout the day were cirrostrati, cumulostrati, cumuli, fleecy clouds, and scud. During the morning frequent showers of rain occurred, especially one at 9h. 30m. p.m., when the direction of the wind changed from S.W. to N.W. A great gloom prevailed in the evening. At 11h. 20m. p.m. the moon was surrounded by a faint halo.
THURS.	None was shewn till 5h. a.m. Positive with moderately strong tension after this time.	See General Remarks.	A small amount of cloud was distributed over the sky till 1h. a.m.; shortly after that time it became overcast with cirrostratus and scud, and remained so with slight exception to 2h. p.m. Cumuli and cumulostrati were also prevalent in the morning. From 4h. p.m. to 5h. 30m. the sky was nearly free from cloud, but shortly after 10h. p.m., every part became overcast.
FRI.	Positive all day; the tension strong from 3h. p.m. to 12h. p.m.	See General Remarks.	Overcast with cirrostratus and scud until 9h. a.m.; from that time until after 5h. p.m. more than three-fourths of the sky were covered with cumuli, cumulostrati, cirrostrati, and scud. During the remainder of the day a large amount of cloud was prevalent. A slight haze prevailed in the morning and afternoon.
SAT.	Positive all day; the tension at times strong. The maxima at 1h. a.m. and 5h. a.m.	See General Remarks.	A large amount of cirrostrati, fleecy clouds, and scud were distributed over the sky throughout the day. About noon several detached cumuli were visible. At 5h. 50m. p.m. a fine double solar halo was seen, the inner being at a distance of 22' from the sun. It remained visible till 6h. 30m. p.m. From 2h. p.m. to 5h. p.m. the amount of cloud was small, but before 9h. p.m. the sky became overcast, and remained so. A coloured lunar halo was visible from 8h. 30m. to 9h. 5m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 52°6; and the mean reading at 7h. 30m. p.m., was 56°1; the mean readings at the Royal Observatory for the same times were 51°3 and 55°1 respectively.

† The mean direction of the wind for the week is S.W.

Erratum in the report of the week ending April 25th.—In the column under Electricity, and ranging with Friday, April 24th, for "a galvanic current between 2h. and 8h. a.m.," read "and galvanic currents occasionally between 3h. a.m. and 4h. a.m."

*During the Week ending Saturday, May 16th, 1846.*

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 19,  
(ending Saturday, May 9th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging:—	duration
Daughter of a marble polisher, 11, inflammation and sloughing of omentum after a blow on the abdomen, by falling on a stone whilst at play (post mort., no inquest)	16 days	Brewer's labourer, 34, injuries to his body from having been accidentally crushed by the wheels of a cart, of which he had charge	instant	Omnibus driver, 34, suicide by hanging.	
In University College Hospital, porter at an hotel, 53, fracture of the base of the skull, caused by an accidental fall down a flight of stairs	*	M. 81, fractured thigh (no inquest)	3 weeks (How caused?—this return is imperfect.)	M. 39, hanging himself in a fit of insanity.	
In University College Hospital, brewer's servant, 22, delirium tremens, consequent on a fracture of the leg, from a fall whilst pulling a rope fastened to a tree	*	Drowning:—		Burns and Scalds:—	
M. (not known), supposed 35, found dead in the River Thames, with fractured leg, and severe cut under the chin, supposed to have been received by falling from the yard-arm of a ship, against a barge, and thence into the water.		M. 29, accidentally drowned by falling from the Hungerford pier into the River Thames.		Son of a cutler, 4, burn of the whole body—clothes supposed to have taken fire when playing with fire in the grate	2 hours
		Son of a shipwright, 4, found drowned. (The name of the river, canal, or other water, is improperly omitted in this case.)		Daughter of a tallow chandler, 3, scalded by boiling water from a tea kettle (no inquest)	10 days
		Captain of a canal barge, 28, drowned by accidentally falling over a large side, while at work.		Poison:—	
				In University College Hospital, F. 66, an undiluted dose of hydrochlorate of morphia, given to her by the hospital nurse in mistake	*

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 1, natural—disease of the lungs—no medical treatment till the case was hopeless	*	M. 2, { natural—subject to fits	2 months	F. 5 mon., { died apparently from convulsions	*
M. 85, natural—had suffered from rheumatism—not under medical treatment—fell and died	instantly	F. 53, found dead from the effects of the long-continued use of intoxicating liquors	*	M. 10 weeks, found dead without marks—convulsions.	
F. 1, mesenteric disease—natural	*	F. 10 mon., natural—seized with cough, and died in (no previous illness)	3 minutes	F. 24, natural death—rupture of a blood vessel of the liver—chronic disease	*
F. about 50, congestion of blood in the lungs, produced by natural causes	*	M. 7 mon., natural death—convulsions	sudden	M. 35, natural death from apoplexy	13½ hours
F. 3, { disease of the membranes of the brain	*	F. 77, natural death—spasms and asthma	*	F. 44, natural death from tumour of the brain, and not from violence	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and of strong tension at 9h. 20m. a.m. At other times slightly positive.	Rain falling. See General Remarks.	The greater part of the sky was covered throughout the day with cirrostrati, cumulostrati, and sead. Rain was falling slightly from 7h. 50m. a.m. to 9h. a.m., and heavily from 8h. 20m. p.m. to 9h. 45m. p.m.
MON.	Positive throughout the day, with moderately strong tension. The maxima at 2h. a.m. and 5h. a.m.	See General Remarks.	Cloudless till after 3h. a.m.; shortly after that time the sky became overcast, and remained so until 5h. a.m. From 9h. a.m. to 3h. p.m. one-half of the sky was covered with cumuli and fragments of light sead. Shortly after 5h. p.m. it became cloudless, and remained so until midnight.
TUES.	No electricity shewn till 5h. p.m.; from that time until midnight positive, and tension strong.	See General Remarks.	Cloudless until 9h. a.m.; during the remainder of the day one-half of the sky was covered with cumuli, cirrostrati, and fragments of sead. At 6h. p.m. two fine parhelia were visible at a distance of 22° from the sun.
WED.	None was shewn till 9h. a.m., at which time it was positive and of moderate ten- sion. From 10h. a.m. to 7h. p.m. nothing was shewn. Negative and active from 7h. 20m. p.m. until midnight.	See General Remarks. See General Remarks.	Overcast with cirrostratis and sead throughout the day. Rain was falling frequently in the morn- ing and afternoon. The wind was blowing in frequent gusts to 4lbs. on the square foot, from 11h. a.m. to 2h. p.m.
THURS.	Positive and of moderately strong tension throughout the day. The maximum at 11h. 20m. p.m.	See General Remarks.	The prevailing clouds throughout the day were cirrostrati, cumuli, and light sead. The wind was blowing in occasional gusts to 4lbs. on the square foot, from 6h. a.m. to 4h. p.m.
FRI.	Positive and active throughout the day. The maxima at 5h. p.m. and 11h. p.m.	See General Remarks.	A small amount of cloud was distributed over the sky till 6h. a.m. From 9h. a.m. to 5h. p.m. about one-half of the sky was covered with cirrostrati, cumuli, and sead. Cloudless from 5h. p.m. until midnight.
SAT.	Positive and active till 3h. a.m. From 3h. a.m. till midnight slightly po- sitive at each examination.	See General Remarks.	The sky remained cloudless until 3h. a.m. During the remainder of the day (with the exception of a short time after noon) the clouds were unbroken. Rain was falling heavily at 11h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 49.6; and the mean reading at 7h. 30m. P.M., was 52.4; the mean readings at the Royal Observatory for the same times were 48.1 and 51.5 respectively.

† The mean direction of the wind for the first two days is S.W., and for the remainder of the week N.E.

*During the Week ending Saturday, May 23rd, 1846.*

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 20,  
(ending Saturday, May 16th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

CORONERS' RETURNS OF DEATHS BY VIOLENCE.											
NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."											
Fractures and Contusions:—				Wounds:—				Hanging and Suffocation:—			
In St. George's Hospital, navigator, 50, inflammation following fracture of right arm, extending to the shoulder-joint—fell down stairs at his lodging-house, Keusall New Town (post mort.)				In St. George's Hospital, labourer, 33, inflammation of the lungs and pleura following wound in the throat—no evidence how inflicted (post mort.)				M. 14, suffocation by hanging himself, but whether in making an experiment or otherwise, we have no sufficient proof			
In St. Thomas' Hospital, widow of a basket-maker, 64, the effects of a fracture of her left leg, by falling from her chair in a state of intoxication at St. Mary at Hill, (p.m.)				In St. George's Hospital, bricklayer's labourer, 45, erysipelas of the forearms, and fever following wound in the throat, inflicted by himself with a razor when in a state of temporary insanity				Carpenter, 37, suffocation from hanging—of unsound mind.			
In Guy's Hospital, widow of a bricklayer, 76, mortification of her back from lying in bed, through the effects of fractured legs, by falling down stairs at East-st., Walworth,				Messenger to the Queen's kitchen, 42, temporary insanity—cut his throat with a razor, instantly				Mariner, 35, hanged himself in a temporary state of insanity.			
Daughter of a leather-japanner, 3, a fall down stairs causing spinal disease (no inquest).				Smith, 23, drowning—supposed to have fallen in the water when intoxicated.				Grocer, 55, suicide by hanging, being mentally deranged.			
In Westminster Hospital, labourer, 57, comminuted fracture of both thighs, and extensive laceration—fell with a travelling crane at Mr. Surtee's stone-wharf, Millbank, when raising 12 tons of marble from a barge—the framework gave way from the weight of the marble				Tailor, about 45, not known how he came in the water—had been missing about 40 days, and threatened to commit suicide.				In St. George's Hospital, daughter of a labourer, 5, burns of the back and neck from the clothes taking fire, supposed from fire in the grate (post mort.)			
Labourer, about 48, fracture of the skull—fell with a travelling crane, when raising 12 tons of marble from a barge at Mr. Surtee's wharf—framework gave way from the weight of the marble				Daughter of a painter, 1, drowning in the Thames, wherein she was thrown wilfully and maliciously by her mother, Eliza Clark.				In Bartholomew's Hospital, son of an ostler, 2, burnt by his pinafore catching fire, by a spark from the fire at Constable Alley, Hoxton			
In Guy's Hospital, engine-driver, 29, fracture of his skull by falling from an engine on the Eastern Counties Railway, near Broxbourne, whilst the train was in motion, (p.m.)				Daughter of a painter, 7, drowned in the River Thames—wilful murder against Eliza Clark.				F. 76, found dead, and body much burnt—whether burnt to death no evidence to prove.			
In St. George's Hospital, groom, 26, secondary deposits in the lungs after amputation of left leg—compound comminuted fracture—a horse ran away with him in the Fulham-road, and forced his leg against a cart (p.m.)				F. about 33, drowning—not known how she came into the water.				M. apparently 26, accidental death by burns from his shirt taking fire			
Cooper, 2, accidentally killed by the rear wheel of a certain cart passing over his body				Waiter, 34, unknown by what means he came into the water.				F. 3, accidental death by burns from her clothes taking fire			
In St. George's Hospital, farm-labourer, 63, inflammation of right hand and arm				(The name of the river, canal, or other water, should be stated in all cases of drowning.)				F. 60, accidental death by burns from her clothes taking fire			
In St. Thomas' Hospital, labourer, 23, fracture of his ribs, and rupture of his lung at Blackheath, but how caused there is no evidence (post mort.)				M. 35, drowned by the upsetting of a wherry boat, how caused unknown.				In Bartholomew's Hospital, labourer, 55, scalded by the upsetting of a boiler containing hot water, whilst larking with another man at Upper Thames Street			
				F. 32, drowned herself in the Regent's Canal in a temporary state of insanity.				M. 2, violent scald—convulsions (no inquest)			
				M. 20, found dead—apparently drowned—without marks.				Poison:—			
				M. 23, found dead without marks, apparently drowned.				In Guy's Hospital, servant to the Hudson's Bay Company, 50, poisoned himself by taking corrosive sublimate at Fenchurch Street—temporary insanity (post mort.)			
				M. 66, found dead without marks of violence, apparently drowned.				Daughter of a lathe and tool maker, 3 weeks, natural death, which may have been accelerated by an overdose of stuff out of the barrel, administered as a composing draught, and not to destroy life			
				F. 77, found dead without marks, apparently drowned.				M. 10 days, poison (arsenic)—wilful murder—(post mort.)			
				F. 19, found dead, apparently drowned.				Daughter of a single woman, 7 mon., congestion of the brain, resulting from her having been inadvertently fed with bread, steeped in beer			
				F. 24, found dead without marks of violence, apparently drowned.							
				M. servant, 39, found dead, without marks of violence, apparently drowned.							
				M. apparently a seaman, about 22, drowned, by what means no proof—found in the River Thames, Mill Stairs, Bermondsey							

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.											
M. 22, congestion of the brain, caused by drinking ardent spirits (post mort.)				F. 21, natural death—apoplexy (second attack)				F. 29, natural death from diseased heart			
M. about 27, natural—supposed from the rupture of a blood-vessel				M. 46, natural death—epileptic fit				M. 36, apoplexy—fell in the shop when at work, and died			
M. 56, { congestion of the brain				M. 45, natural—no previous illness, except from incessant drunkenness				F. 55, natural death—haemorrhage			
F. 9 mon., natural death—general debility arising from want of breastmilk (the mother dead)				M. 19, pulmonary consumption				F. 71, natural death from apoplexy			
In Guy's Hospital, F. 53, natural inflammation of her right lung (post mort.)				F. 43, natural—accelerated by intemperance; supposed from disease of the chest—died in bed				F. 54, apoplexy			
F. 51, natural death—chronic disease of the heart (post mort.)				M. 57, rupture of a blood-vessel in the stomach, produced by natural disease				M. 38, natural death—apoplexy			
				F. about 65, natural—treated a week previously for water in the chest				M. 47, over-excitement and exertion, being predisposed from a diseased heart			
								F. 1, natural death; cancerum oris			
								M. 14, natural death by a fit—subject thereto, many years			

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.											
F. 1 day, exhaustion, from what circumstances no proof. (The Registrar adds, "found dead in a garden—no marks of violence.")				M. 9 weeks, found dead.				M. newly born, found dead without marks of violence in the Surrey Canal—no proof whether born alive—supposed to have been in the water at least 14 days—much decomposed.			
M. 58, found dead—natural—no previous illness.				M. 41, found dead in a cabriolet without marks of violence.				M. newly born, found dead in the Surrey Canal—no sufficient proof whether born alive.			
M. 16, natural—no previous medical attendance, sudden				M. 1 mon., found dead in bed without marks of violence—how death was caused unknown.							
M. 10 weeks, found dead in bed without marks of violence.				F. 2 mon., found dead in bed without marks of violence.							

THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:-		duration		King's College H.:-		duration		St. Thomas' H.:-		duration	
M. 44,	{ tubercles . . . . .	*		M. 32,	pneumonia and abscesses in lung (p.m.)	*		F. 45,	phthisis	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Negative and tension strong at 2h. 20m. p.m. Positive, and tension weak at other examinations.	Rain falling slightly. See General Remarks.	The sky was overcast till 4h. p.m.; shortly after this time the clouds became broken, and during the remainder of the day the sky was generally cloudless. Rain was falling slightly at 2h. 20m. p.m.
MON.	Nothing was shewn till 9h. a.m., when it was negative and tension strong. From this time to 10h. p.m. nothing was shewn. Negative and tension moderate at 11h. p.m.	See General Remarks.	Overcast with cirrostratus and scud until noon; after this time to 7h. p.m. the clouds were frequently broken, but before 9h. p.m. it became overcast, and remained so until midnight. Rain was falling heavily from 8h. 20m. a.m. to noon, and again at 11h. p.m. The minimum barometer reading (28.878) occurred at 5h. p.m. The wind was blowing in frequent gusts to 3lbs. on the square foot, from 7h. a.m. to midnight.
TUES.	Positive, and tension weak till 7h. a.m. At 9h. a.m. the tension moderately strong. Negative and tension very strong from 11h. 15m. a.m. to 11h. 31m. a.m. Sparks abundant, and galvanic currents frequent. Negative and tension very strong from 1h. 15m. p.m. to 1b. 50m. p.m. Sparks abundant; galvanic currents shewn. Positive and tension moderately strong during the remainder of the day.	See General Remarks. A heavy shower of rain and hail. Rain falling heavily. See General Remarks	The clouds became extensively broken at 0h. 30m. a.m., and their amount was generally small from that time till 3h. a.m. Before 5h. a.m. cirrostratus and scud collected, and covered a large portion of the sky till 1h. p.m. A violent hail storm occurred at 11h. 27m. a.m. Rain was falling almost incessantly from 1h. 37m. p.m. to 3h. 10m. p.m. From 3h. 20m. p.m. to 5h. 30m. p.m. about one-third of the sky was covered with cumuli, cirrocumuli, and fragments of white scud. Overcast after 7h. p.m. A few flashes of sheet lightning were visible in the east at 8h. 50m. p.m.
WED.	Occasionally positive and negative till 3h. a.m. Nothing shewn from this time till 10h. a.m. Negative and tension strong from 10h. a.m. to 1h. 37m. p.m. Nothing shewn after this till 7h. 20m. p.m., when it was positive and of moderate tension.	See General Remarks.	The sky was generally covered with cirrostratus and scud till 1h. p.m., with frequent heavy showers of rain until this time. The clouds were not so numerous after this time, and it was altogether cloudless before 9h. p.m. A heavy shower of rain fell at 6h. 50m. p.m.
THURS.	Nothing was shewn till 5h. a.m. During the remainder of the day positive, and tension weak. The maximum at 9h. 20m. a.m.	See General Remarks.	A large portion of the sky was covered with cirrostratus and scud till noon; after that time several cumuli were visible. From 7h. p.m. to midnight the amount of cloud was small. Rain was falling heavily in the early part of the morning.
FRI.	Positive and of moderate tension throughout the day. The maxima at 5h. a.m., and 9h. 20m. p.m.	See General Remarks.	The sky was about one-half covered with cirrostratus and vapour till 5h. a.m. A dense fog arose after this time, and obscured the sky till 7h. a.m. From that time till 5h. p.m. cumuli and cirri were prevalent. Nearly cloudless from 6h. p.m. to 10h. p.m., but overcast about 10h. 30m. p.m. to midnight.
SAT.	No electricity was shewn throughout the day.		Cirrostratus and scud covered an extensive portion of the sky throughout the day—at 5h. a.m. a few cirri were visible. A slight fog arose after 10h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 51.8; and the mean reading at 7h. 30m. p.m., was 56.2; the mean readings at the Royal Observatory for the same times were 50.4 and 54.4 respectively.

† The mean direction of the wind for the week is S.W.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, May 30th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 21, (ending Saturday, May 23rd).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued)	duration
In Charing Cross Hospital, F. servant, about 36, fracture of the base of the cranium, and other injuries .....	about 1 hour	In King's College Hospital, hairdresser, 65, fracture of patella .....	4 weeks	M. newly born, accidentally suffocated with fluid contained in a certain vessel; in which it was suddenly born.	
found in the area of the Red Lion public-house, Windmill-street—supposed to have fallen or thrown herself from the staircase window .....		irritative fever (post mort., no inquest) .....	1 week	(How was the fracture caused?)	
In London Hospital, schoolmaster, 84, injured head by a fall from a window, but how such fall was caused unknown .....		Wounds:—		Hanging and Suffocation:—	
In London Hospital, son of a bricklayer, 10, accidental from a fractured skull by a fall from a scaffold .....		M. 60, found in a dying state, with a cut on his eye, leaning on a cask—died from the injury, but how caused unknown .....		F. servant at a tavern, 21, suicide by hanging from a hook—not known to be insane.	
In St. Thomas' Hospital, widow of a sawyer, 66, fracture of the thigh by an accidental fall, while crossing a room .....		F. 43, cut her throat in a temporary state of insanity.		F. newly born, wilfully murdered by some person unknown—strangled with a window blind.	
F. 78, accidental death from a fall down stairs .....		Drowning:—		F. 67, temporary insanity—suicide—hung herself to a bedpost with a clothes line—found hanged.	
F. 63, { paralysis .....	3 months	F. 1, drowning in a pail of water through falling into it from a bed, while negligently left by a girl who had care of it.		M. 49, suicide by hanging with a handkerchief in a bed-room, having been left alone for 6 minutes—being of suicidal disposition.	
fractured leg, caused by a fall from the bed (no inquest) .....	1 month	M. 42, accidentally drowned while falling from a boat.		M. 44, suicide by hanging while insane.	
In London Hospital, labourer, 54, accidental from a fractured and wounded hand, caused by a crush between two pieces of timber ..	1 month	F. 42, drowned herself in a water-butt in a temporary state of insanity.		House-painter, 41, hanged himself—insane.	
In London Hospital, labourer, 68, accidental from a crushed leg, by the wheel of a waggon passing over it .....		Son of a rigger, 12, accidentally drowned by falling into the water of a pond.		Labourer, 43, hanged himself in a temporary state of insanity.	
Son of a boumet-presser, 7, accidentally run over by a cart .....		Son of a lockman, 3, found dead without marks—apparently drowned.		F. 42, hanged herself by a rope to a beam, but in what state of mind no satisfactory evidence appeared.	
M. 60, natural death, which may have been accelerated by a blow, how caused unknown ..		M. apparently about 40, unknown, found dead, apparently drowned.		Daughter of a servant (single woman) 12 days, found dead—apparently suffocated by pressure—but how caused unknown.	
M. 2, consumption, having had his back broken .....	when 9 months old	Sea-apprentice, 15, found dead without marks—apparently drowned.		Burns:—	
(no inquest, no medical attendant lately.)		F. 44, found dead without marks—apparently drowned.		F. 58, burns received from her clothes taking fire accidentally .....	8 hours
M. 94, { dislocation of the hip (joint unreduced)	4 months	M. 55, accidentally falling into the River Thames off a lug—under water nearly 2 mon.		Poison:—	
senectus (no inquest).		F. 65, drowned herself; but in what state of mind at the time, no proof.		Wife of a scaman, pensioner, 71, poisoned herself with white arsenic while in a temporary state of derangement of mind .....	

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

duration	duration	duration
In London Hospital, M. 38, natural death—consumption .....	M. 2, natural death—hooping cough .....	M. 24, natural death—typhoid fever .....
F. 53, natural death—apoplexy .....	M. 60, natural death, sudden, from diseased heart and ossification of valves .....	M. 42, natural death—fit .....
M. 11 mon., natural—no previous illness—seized with a fit and died in .....	F. 28, natural death—spasms .....	M. 53, natural death, sudden, from phthisis ..
F. about 14 wks., exhaustion from want of its natural food (human milk), but whether from wilful neglect or otherwise not ascertainable—having been left at the house 3 weeks before by a stranger, and so deserted.	M. 37, natural death—ruptured heart ..	F. 78, natural death from apoplexy .....
M. 2, natural—convulsions .....	M. 75, natural death—pericarditis .....	F. 65, natural death from apoplexy .....
F. 60, natural—effect of erysipelas .....	F. 44, natural death—apoplexy .....	F. 55, natural death from diseased heart .....
M. 60, natural death—apoplexy .....	F. 65, natural death—apoplexy .....	M. 47, natural death—effusion on the brain ..
F. 45, natural death—fit .....	F. 68, natural death—apoplexy .....	M. 52, natural death from apoplexy—rupture of vessel in the brain .....
M. 40, enlargement of the right auricle of his heart—dropped and died .....	M. 74, natural death, sudden, from diseased heart .....	M. 9, natural death, sudden, from inflammation of the bowels .....
M. 29, natural—pulmonary hæmorrhage—tubercles and old disease of the lungs ..	M. 2 mon., found dead without marks of violence—convulsions .....	M. 44, supposed disease of stomach and intestines .....
F. 1, natural death—diseased heart (sudden) ..	M. 42, natural death—apoplexy .....	M. 40, natural death—rupture of a blood vessel of the heart (post mort.) .....
	M. 70, natural death—rupture of a blood vessel ..	M. 2 mon., natural death—disease of the chest 3 days
	M. 63, natural death—apoplexy .....	M. 75, natural death—dropsy and disease of the heart .....
	F. 27, natural death from apoplexy (post mort.)	
	M. 60, natural death—diseased heart .....	
	M. 1, natural death—convulsions .....	

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

duration	duration	duration
F. 2, natural death by the visitation of God ..	F. 48, natural death—dropped down and died suddenly.	F. 26, found dead in bed without marks of violence—cause unknown.
F. 67, natural—found in her chair insensible, and died in .....	M. 10 weeks, natural—no previous illness	F. 20, found dead with a wound on the right temple, caused after death; but how death was caused unknown.
Child (sex doubtful) about 1 month, unknown—all the organs of the body healthy except the brain, which was too softened by putrefaction to judge of its condition.	M. newly born, unknown.	M. 31, natural death by the visitation of God
M. 1 week, natural—no previous illness.	F. 56, natural—no medical attendance .....	M. 3 months, found dead without marks of violence—cause unknown.
F. 52, natural—not under medical treatment	F. 8, natural causes (post mort.) .....	M. newly born, found dead in a privy—no sufficient evidence that he was born alive—no marks of violence.
F. 56, natural—had complained of pain in the head during the previous week.	M. 15 weeks, found dead without marks of violence.	
F. 7 weeks, natural—no medical treatment—occasional shortness of breath noticed.	F. 3 mon., found dead without marks of violence.	
	F. 3 mon., found dead, but without marks.	
	M. new born, found dead without marks of violence in a privy.	
	F. 8 weeks, found dead without marks of violence.	

THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

<p><i>St. George's H.</i>—No deaths registered.</p> <p><i>Westminster H.</i>—</p> <p>M. 39, dementia—carditis? .....</p> <p><i>Charing Cross H.</i>—</p> <p>M. 25, phthisis pulmonalis ..... 1 year</p> <p>M. 17, caries of the spine and typhoid fever, (post mort.) ..... 3 or 4 years</p> <p>M. 39, exhaustion of the vital powers from excessive drinking (post mort.) .....</p> <p><i>Middlesex H.</i>—</p> <p>M. 50, bronchitis—emphysema pulmonum .. 4 months</p> <p>M. 45, diseased liver—albuminuria. .... 18 months</p> <p>F. 30, phagedenic ulcer of fauces. .... 1 year</p> <p>F. 55, cancer uteri. .... 1 year</p> <p><i>University College H.</i>—</p> <p>M. 50, nephritis—pleuritis caused by absorption of a morbid poison from diseased bone ..</p> <p><i>Fever H.</i>—No deaths registered.</p>	<p><i>Small Pox H.</i>—</p> <p>M. 21, small-pox natural, confluent cum delirio .....</p> <p><i>King's College H.</i>—</p> <p>M. 23, continued fever ..... 10 days</p> <p>F. 37, abscess in pelvis, and erysipelas (post mort.) ..</p> <p><i>Bartholomew's H.</i>—No deaths registered.</p> <p><i>London H.</i>—</p> <p>M. 5, mesenteric disease ..... 9 months</p> <p>renal disease ..... 15 years</p> <p>phthisis ..... 4 or 5 years</p> <p>acute nephritis ..... 26 days</p> <p>M. 45, multilocular encysted kidney 9½ inch. by 5½ inch., containing large calculi—minute tubercles in liver—tubercular cicatrices in apices, and crude tubercles in base of both lungs (p.m.) ..</p> <p><i>Guy's H.</i>—</p> <p>M. 33, phthisis .....</p> <p>M. 52, delirium tremens .....</p> <p>M. 38, phthisis .....</p>	<p><i>Guy's H. (continued).</i>—</p> <p>F. 16, scrofulous disease of the spine. ....</p> <p>F. 55, dropsy .....</p> <p>F. 42, phthisis—hæmoptysis .....</p> <p><i>St. Thomas' H.</i>—</p> <p>F. 36, chronic laryngitis ..... 16 weeks</p> <p>F. 12 weeks, convulsions .....</p> <p>M. 27, chronic bronchitis and pneumonia ..</p> <p>M. 34, phthisis ..... 3 months</p> <p><i>Dreadnought H.</i>—</p> <p>epileptic convulsions. .... 5 days</p> <p>comatose on admission (18 hours before death.)</p> <p>great vascularity of the brain and its membranes (post mort.) ..</p> <p>pleuro-pneumonia ..... 6 days</p> <p>grey hepatization upper lobe—red hepatization lower lobe of left lung.</p> <p>M. 49, pleuritic adhesions and some effusion (post mort.) ..</p>

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at 9h. a.m. Positive and tension weak at other examinations.	Overcast—foggy. } See General Remarks.	Cirrostratus and scud covered the sky during the greater part of the day. A few breaks during the evening. There was a fog during the morning.
MON.	Positive and tension moderate throughout the day. The maxima occurred at 9h. 20m. a.m. and 3h. 20m. p.m.	} See General Remarks.	The sky became clear about 3h. a.m., and continued so till 9h. a.m., when it became overcast, and remained so till 4h. p.m. About six-tenths were afterwards covered till midnight.
TUES.	Positive and tension very weak till 2h. p.m. Positive and tension moderate throughout the rest of the day. The maximum occurred at 11h. 20m. p.m.	} See General Remarks.	The sky became overcast soon after 6h. a.m., and continued so until 6h. a.m., when the clouds became broken. It was again overcast during the afternoon, and variable during the remainder of the day.
WED.	Positive and tension generally strong throughout the day. The maximum at 7h. 20m. p.m.	} See General Remarks.	Generally cloudless until a little before noon, when the sky became overcast, and, with the exception of a few breaks during the afternoon, continued so till midnight.
THURS.	Positive and tension very weak throughout the day.	} See General Remarks.	The sky became nearly cloudless about 1h. a.m., and continued so until 9h. a.m. The amount of cloud was continually varying during the remainder of the day.
FRI.	Positive and tension very strong throughout the day.	} See General Remarks.	Nearly overcast till 4h. a.m.; from that time till 9h. a.m. the amount of cloud was small. Cirrostratus and scud covered the greater part of the sky from that time till 9h. a.m.: it was cloudless afterwards till midnight.
SAT.	Positive and tension very weak till 7h. a.m. Positive and tension strong from 7h. a.m. till midnight.	} See General Remarks.	Cloudless till 4h. p.m., after which time there was occasionally a bank of cirrostratus around the horizon. Hazy during the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 53.1; and the mean reading at 7h. 30m. P.M., was 60.9; the mean readings at the Royal Observatory for the same times were 51.7 and 59.8 respectively.

† The mean direction of the wind for the first five days is N.N.W., and for the remainder of the week S.W.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, June 6th, 1846.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 22, (ending Saturday, May 30th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation (continued):—	duration
In Bartholomew's Hospital, porter, 76, fracture of his left thigh caused by slipping off the kerb, whilst carrying a load in Basinghall-street, 4 days		F. 7 mon. { blow on the head ..... hydrocephalus chronic (no inquest) ..		Son of a labourer 14 weeks, found dead without marks of violence, and apparently suffocated.	
In Charing Cross Hospital, son of a carpenter, 8, meningitis following fracture of the base of the skull—a packing case fell upon him while standing in Arundel-place (post mort.) 10 days		Wound:— M. 60, erysipelas (traumatic) no inquest..... 14 days		M. 7 wks. { found dead in bed without marks. convulsions—apparently suffocated.	
In Bartholomew's Hospital, printer, 62, delirium tremens, brought on by fracture of the right leg, by being run over by a van as he was crossing Aldermanbury Postern ..... 4 days		Drowning:— M. newly born, found in the River Thames—wilfully murdered by some person or persons unknown.		Son of a servant, newly born, found dead between the mattress and sacking of the bed, after concealed pregnancy—asphyxia—no evidence how caused (post mort.)	
M. 65, { injury from a horse..... gangrene of leg (no inquest)..... 37 days		Son of a labourer 6, accidentally drowned by falling into the waters of the Regent's Canal.		Burns and Scalds:— In Bartholomew's Hospital, son of a furrier, 7, burned by his bed-gown taking fire, whilst at play in his father's room at Islington .. 24 hours	
Labourer, 47, injuries of the head from the wheel of a grain-waggon, from a shaft of which he had fallen ..... instantly		Fisherman, 26, accidentally drowned in the River Thames off Woolwich.		In Bartholomew's Hospital, daughter of a fish-dealer, 12, burned by her clothes taking fire on the stairs of her father's house in Warwick-place, Whitecross-street, she having a lighted candle in her hand..... 10 days	
M. 26, accidental death by falling from a cart while in liquor, and fracture of the skull from a cart-wheel passing over his head .. *		Hanging and Suffocation:— M. 52, suicide by hanging—no previous evidence of insanity.		NOTE.—The true number of violent deaths in the return for week ending May 30th, was 21; a case of suicide by hanging was returned first from private information, and afterwards from Coroner's certificate, and by this means led to mis-statement.	
The three following are manifestly imperfect.		F. 40, suicide by hanging—of unsound mind.			
M. 70, { fractured head..... 2 days ruptured intestine (no inquest) ... *		Wife of a baker, 34, hanging herself by a cord of the window in her cell, her feet not being off the ground—temporary insanity (Compter, Giltspur-street).			
		Daughter of a groom, 1, suffocated by falling into the soil of a privy accidentally ..... 20 min.			

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 68, natural—symptoms of affection of the heart during the previous day.		F. 60, natural death in an apoplectic fit .....		* The 9 following cases were convicts at Woolwich:—	
M. 3 mon., congestion of blood in the brain—cause unknown..... *		(The Registrar adds, that "she was subject to fits from a very early age.")		M. 45, bronchitis .....	
M. 51, natural death, sudden, from diseased heart .....		M. 23, natural causes—water on the brain (p.m.) ..		M. 70, old age—diarrhoea..... *	
F. 87, natural death by visitation of God, from apoplexy .....		M. 70, suddenly, from disease of the heart .. *		M. 18, consumption .....	
		M. 22, natural death from the rupture of a blood vessel internally, seat not defined .....		M. 70, diseased liver—consumption .....	
		M. 5 mon., natural death—diarrhoea ..... 17 hours		M. 22, consumption .....	
				M. 20, consumption .....	
				M. 47, asthma and disease of the kidneys .... 26 days	
				M. 33, pleurisy and pneumonia .....	
				M. 66, bronchitis and old age .....	

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 45, dropped in the churchyard at a funeral, and died from natural causes in..... 8 hours		F. 1, natural .....	sudden	F. 40, natural—no previous medical attendance sudden	
F. 67, found dead, natural—no previous medical treatment.		M. 9 weeks, natural—not ill in any respect since birth.		F. 2, natural death by the visitation of God ..	
F. 87, found dead—natural.		F. 57, natural—no previous illness of any kind—suddenly fainted and died ..... instantly		M. 4 mon., natural causes .....	sudden
				M. 68, natural death and debility from age.	

### THIRTEEN HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:—	duration	Westminster H.:—No deaths registered, ..	duration	King's College H.:—	duration
M. 21, { scrophula ..... 10 years diseased vertebrae and sacrum..... 9 months abscesses from spine ..... 5 months		Charing Cross H.:—No deaths except from violence registered.		M. 27, pleuro-pneumonia (post mort.) probably 10 wks.	
M. 27, inflammation of the throat and erysipelas ..		Middlesex H.:—No deaths registered.		M. 28, { laryngeal ulceration with phthisis .. pericarditis .....	4 days
F. 49, disease of the heart and dropsy..... *		University College H.:—No deaths registered.		F. 40, erysipelas .....	1 week
F. 52, disease of the brain .....		Fever H.:—No deaths registered.		F. 16, diseased kidneys—dropsy (post mort.) .. *	
F. 63, disease of the heart and lungs .....		Small Pox H.:—No deaths registered.		{ peritonitis .....	1 week
F. 28, inflammation of the pleura and phthisis .. *				F. 26, { ascites—anasarca .....	2 or 3 weeks
				{ oedema of lungs.....	24 hours

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued).—

Bartholomew's H.:	duration	London H.:	duration	Guy's H. (continued):	duration
M. 40, paralysis . . . . .	•	M. 48, ascites . . . . .	6 weeks	M. 35, sweep's cancer . . . . .	•
M. 67, paralysis . . . . .	•	F. 30, diseased rectum . . . . .	•	F. 22, diseased kidneys—hysteria . . . . .	•

M. 36, delirium tremens . . . . .	•	F. 26, consumption . . . . .	6 months	M. 48, diseased heart and liver . . . . .	duration uncertain—bad 11 weeks
M. 40, typhus fever . . . . .	•	Guy's H.:	•	M. 42, disease of aortic valves . . . . .	uncertain duration—supposed not less than 12 mon.
M. 44, pericarditis, incidental upon disease of the kidney . . . . .	•	M. 28, phthisis . . . . .	•	Dreadnought H.:	•
F. 56, paralysis . . . . .	•	M. 17, phthisis . . . . .	•	M. 25, { phthisis . . . . .	4 months
F. 38, strangulated hernia . . . . .	•	M. 50, aneurism of aorta . . . . .	•	{ cavities in each apex . . . . .	•
F. 49, ovarian dropsy . . . . .	•	M. 55, phlegmonous erysipelas . . . . .	•	Was there a post mort. examination?	•
		M. 32, phthisis . . . . .	•		
		M. 66, stricture—diseased bladder . . . . .	•		

## DISTRICTS OF KENSINGTON AND CHELSEA:—

### CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

St. John, Paddington:—	duration	Fulham:—	duration	Brompton:—	duration
M. 48, phthisis pulmonalis .....	18 months	M. 48, inflammation of the bowels (not certified) .....	•	M. 57, serous apoplexy .....	9 days
{ epilepsy, after vomiting on a full meal .....	•	M. 10 mon., bronchitis .....	7 days	F. 43, erysipelas of the head .....	8 days
(2nd attack) with previous oppression 1 day .....	•	M. 53, softening of the brain .....	1 year	F. 8, consumption .....	•
saugineous effusion on surface of convolutions of left side of brain; many bloody puncta, generally very soft; the corpus callosum not particularly soft; well-defined effusion of blood of the size of a walnut in posterior lobe of lungs (right side)—lungs otherwise slightly oedematous—stomach containing large quantity of undigested matter (post mort.) .....	•	F. 6 mon., cold—brouchitis .....	3 weeks	South Chelsea:—	•
M. 2, { .....	•	St. Paul's, Hammersmith:—	•	M. 64, { moco-enteritis .....	unknown
{ .....	•	M. 9 mon., influenza—convulsions .....	1 week	{ apoplexy (post mort.) .....	2 days
{ .....	•	M. 21, phthisis pulmonalis .....	6 months	F. 50, phthisis .....	2 years
{ .....	•	M. 68, enlargement of the heart and anasarca (not certified) .....	4 months	F. 1, marasmus .....	•
{ .....	•	M. 32, phthisis pulmonalis .....	•	F. 27, pulmonary consumption .....	•
{ .....	•	F. 43, sciatica; scirrhus mammae .....	8 months	F. under 1, inflammation of chest .....	•
{ .....	•	F. 3, cancerum oris .....	6 months	F. 27, consumption .....	8 months
M. 1, influenza—cold—laryngitis .....	6 days	St. Peter, Hammersmith:—	•	Chelsea (North West):—	•
M. 3, pneumonia .....	7 days	M. 64, { apoplexy, 1st attack .....	6 years ago	M. 7 mon., pneumonia .....	14 days
{ disease of brain—chronic rheumatism for years .....	•	{ 2nd attack .....	2 hours	F. 3 mon., { convulsions .....	•
F. 78, { attacked with apoplexy, followed by hemiplegia and loss of voice .....	5 months	{ .....	•	{ weakness and wasting from birth .....	•
St. Marg, Paddington:—	•	Kensington Town:—	•	Chelsea (North East):—	•
M. 2, water on the brain (not certified) .....	•	M. 3 days, convulsions .....	•	M. 7, phthisis .....	•
M. 9 mon., teething—hydrocephalus .....	3 weeks	M. 31, hypertrophy of heart (post mort.) .....	•	M. 29, phthisis .....	•
M. 6, fever—vomiting of blood .....	•	F. 6 mon., { hooping cough .....	•	M. 5 mon., defective nutrition .....	•
M. 2, pneumonia .....	2 weeks	{ pneumonia .....	•	M. 42, { delirium tremens .....	4 days
F. 68, jaundice and enlarged liver .....	•	F. 32, consumption (not certified) .....	•	{ epilepsy .....	1 day
		F. 41, carcinoma uteri .....	12 months	F. 3, phthisis—pertussis .....	•
		F. 1 hour, unknown.	•		

### DEATHS BY SMALL POX, TYPHUS, ETC., HÆMORRHAGE, MALFORMATION, HERNIA, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

Small Pox:—	duration	Other cases of Fever, not assigned to Typhus in abstract:—	duration	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	duration
M. 2, small pox after vaccination .....	•	F. 8, intermittent typhoid, and exhaustion .....	7 days	F. 29, milk fever—meningitis .....	7 days
F. 4, { small-pox .....	11 days	F. 5, { infantile fever .....	14 days	{ phthisis .....	3 months
{ (vaccinated 3 years since without effect.) .....	•	M. 11 mon., infantile fever probably from den- .....	5 days	F. 30, { uterine hæmorrhage .....	3 months
F. 1, variola (not vaccinated) .....	•	{ titution .....	•	{ Did this occur in childbirth? assigned to phthisis in abstract. .....	•
Typhus:—	•	M. 15, remittent fever—bronchitis .....	16 days	F. 24, { childbirth .....	12 days
M. 66, fever and general decay .....	9 days	F. 58, { ague .....	6 weeks	{ puerperal fever .....	4 days
F. 4 days, typhus fever .....	•	{ jaundice .....	3 months	F. 27, obstruction of the bowels after childbirth, 3 days .....	•
F. 73, fever—peritonitis .....	2 weeks	M. 45, { rheumatic fever .....	6 days	{ metritis from removal of an adhesive .....	•
F. 34, irritative fever .....	•	{ typhoid .....	3 days	F. 23, { placenta by the midwife .....	•
M. 72, typhus fever .....	•	{ remittent fever with muscular rheu- .....	12 days	{ peritonitis .....	6 days
M. 7, fever .....	8 days	F. 40, { ovarian inflammation and abscess .....	12 days	F. 25, { parturition .....	20 days
F. 1, { inflammatory fever .....	7 days	{ (post mort.) .....	5 days	{ phlebitis .....	14 days
{ inflammation of the brain .....	4 days	F. 44, { acute articular rheumatism .....	5 days	F. 23, { childbirth .....	8 days
F. 27, fever .....	•	{ typhoid fever .....	2 days	F. 30, { puerperal hysteritis .....	80 hours
F. 53, { low fever .....	1 month	F. 9, { rheumatic fever .....	12 days	F. 30, uterine hæmorrhage .....	•
{ thrush .....	3 weeks	{ typhus mitior .....	5 days	F. 22, typhus fever originating in scarlet fever, 2 days after labour .....	•
F. 6, { typhus fever .....	•	Hæmorrhage:—	•	{ ulcerated cæcum .....	•
{ under medical treatment 6 days .....	6 days	M. 3 mon., rupture of a blood vessel .....	•	F. 29, { pleuro-pneumonia (labour occurring in .....	17 days
F. 50, fever with diarrhoea .....	10 days	{ hæmorrhage into the pericardium from .....	•	{ it) post mort. .....	•
M. 61, consilientis—typhus fever .....	9 days	{ rupture of the left auricle .....	•	F. 36, { disease of lungs and heart .....	a few hours
M. 12, { meningitis acute .....	10 days	M. 34, { enormous hypertrophy of the ventricle .....	•	{ (assigned to disease of lungs in abstract.) .....	•
{ typhoid fever and convulsions .....	5 days	{ general dropsy .....	•	Delirium tremens:—	•
M. 65, fever .....	14 days	{ See above.	•	F. 38, delirium tremens .....	30 hours
M. 68, fever .....	7 days	Malformation:—	•	M. 48, { delirium tremens .....	•
F. 11, typhus .....	20 days	F. 1, cleft palate—exhaustion .....	•	{ effusion on the brain .....	•
F. 58, typhus .....	7 days	M. 2, spina bifida .....	•	M. 24, { delirium tremens .....	2 days
M. 18, brain fever .....	•	F. 2, malformation of the heart .....	•	{ apoplexy .....	5 min.
M. 30, fever .....	5 days	M. 1 mon., spina bifida (post mort.) .....	•	M. 28, delirium tremens .....	6 days
F. 73, { synochus .....	4 months	F. 10 mon., cyanosis .....	from birth	M. 51, delirium tremens .....	7 days
{ enteritis .....	5 weeks	F. 12 weeks, spina bifida .....	•	{ See above.	•
F. 39, fever—erysipelas .....	3 days	M. 19 days, { imperforate anus .....	16 days	Intemperance:—	•

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each observation.	See General Remarks.	Cloudless throughout the day.
MON.	Nothing was shewn till after 7h. a.m., when it was positive, and tension moderate. It continued to 11h. 30m. a.m. During the remainder of the day it was positive and very weak.	See General Remarks. See General Remarks.	The sky was cloudless throughout the day.
TUES.	Nothing was shewn till 11h. a.m. From that time until midnight it was positive with moderate tension. The maximum at 9h. 20m. a.m.	See General Remarks.	With the exception of a few linear and cernoid cirri, which were scattered over the sky about noon, it was nearly cloudless throughout the day. A slight fog was prevalent during the morning. At 7h. a.m. the sky was covered with a thin cirrostratus.
WED.	Positive and tension weak till 5h. a.m. During the remainder of the day positive and tension moderate. The maxima at 1h. 20m. p.m., and 9h. 20m. p.m.	See General Remarks.	Cloudless throughout the day. A thin fog prevailed in the morning.
THURS.	Positive throughout the day, and at times the tension strong. The maximum occurred at 11h. 20m. a.m.	See General Remarks.	Cloudless till after 3h. 30m. p.m. During the remainder of the day about one-half of the sky was covered with cirrostratus. An arc of a solar halo was visible from 2h. 20m. p.m. to 6h. 45m. p.m. Its radius was 23°.
FRID.	Positive and tension strong from 9h. 20m. a.m. to 3h. 20m. p.m.; at other times it was positive with weak tension.	See General Remarks.	A large quantity of cirrostratus was distributed over the sky till after 11h. 20m. p.m. From 3h. p.m. to 10h. p.m. only a small amount of cloud prevailed, but before midnight three-fourths of the sky were covered with a thin cirrostratus.
SAT.	Positive and tension moderate throughout the day. The maxima at 7h. 20m. p.m., and 9h. 20m. p.m.	See General Remarks.	The prevailing clouds during the day were cirrostrati. A few cumuli, cumulostrati, and cirri were visible about noon.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 53°7; and the mean reading at 7h. 30m. P.M., was 60°8; the mean readings at the Royal Observatory for the same times were 56°6 and 65°7 respectively.

† The mean direction of the wind for the week is E.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, June 13th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension strong at 9h. 30m. a.m. Positive and tension moderate at other examinations.	A thin fog prevalent. See General Remarks.	Cirrostratus and vapour covered a large portion of the sky throughout the day. In the afternoon cumuli and a few cirri were visible.
MON.	Positive throughout the day. The tension was strong from 1h. a.m. to 8h. a.m., and generally moderate at other times. The maxima occurred at 7h. a.m. and 7h. p.m.	See General Remarks.	The sky was generally overcast until 2h. p.m.; about one-third part was afterwards clear till midnight. Rain was falling from 1h. 10m. a.m. to 2h. 30m. a.m.
TUES.	Positive and tension moderate through- out the day. The maximum occurred about noon.	See General Remarks.	The amount of cloud was variable until 3h. p.m., and the sky was about one-half covered with cirrostratus and soon during the rest of the day. At 7h. 30m. p.m. a very perfect rainbow was visible. It continued for about twenty minutes, during the whole of which time the sun was in a cirrostratus cloud.
WED.	Positive and tension weak till 7h. a.m. Positive and tension strong during the rest of the day. The maximum at 5h. 20m. p.m.	See General Remarks.	It became clear about midnight, and continued nearly so until 3h. 30m. a.m., when it became overcast, and remained so, with one exception, during the remainder of the day.
THURS.	Positive throughout the day. The tension was strong till 7h. a.m., but after that time it was generally active. The maxima at 9h. 20m. a.m., and 7h. 20m. p.m.	See General Remarks.	About two-thirds of the sky were covered with cirrostratus, fleecy clouds, and occasionally a few cirri, throughout the day.
FRID.	Positive and tension moderate throughout the day. The maxima at 9h. 20m. a.m., and 9h. 20m. p.m.	See General Remarks.	A thin cirrostratus covered the greater part of the sky during the morning. The prevailing clouds during the afternoon and evening were cirrostratus, fleecy clouds, and cumuli. It was nearly cloud- less from 9h. p.m. to midnight.
SAT.	Positive and tension generally strong throughout the day. The maximum at 1h. 20m. a.m.	See General Remarks.	With the exception of a few cirri and light clouds, the sky was clear till 1h. p.m. During the afternoon the clouds were mostly of the cirro-cumulus kind. It became clear again a little before midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 61.8; and the mean reading at 7h. 30m. P.M., was 69.1; the mean readings at the Royal Observatory for the same times were 61.6 and 68.4 respectively.

† The mean direction of the wind for the week is S.W.

It seems probable that the maximum index of the self-registering thermometer suspended from the Dreadnought is deranged.

A TABLE OF  
Births and Deaths registered in the Metropolis,  
During the Week ending Saturday, June 20th, 1846.

ANNUAL SERIES VII.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.										[No. 25.

In St. George's Hospital, labourer, about 15, inflammation of the brain and its membranes from fracture of the frontal bone—fell from a scaffold when at work at No. 57, Lowndes-square (post mort.) .....	20 days	F. 62, { cancer .....	9 years	Shoemaker, 21, accidentally drowned by falling off the pier at Limehouse Hole Stairs.	•
In Middlesex Hospital, F., cook, 52, injury of the spine at the neck, from being thrown down stairs by a cat running between her feet .....	42 days	F. 7 mon., { fracture of the neck of thigh bone .....	9 days	Lighterman, 31, drowned by accidentally falling into the River Thames.	•
In Bartholomew's Hospital, clerk, 56, erysipelas brought on by a wound in the scalp from a fall, whilst in liquor, in Lisle-street, Soho, 11 days	11 days	F. 7 mon., { How was the fracture caused? (no inq.) .....	2 days	F. 20, drowned by falling out of a skiff into the River Thames accidentally.	•
In Middlesex Hospital, labourer, 35, injuries of the pelvis from the fall on his back of a marble saw-frame, through the breaking of a bad chain-link .....	5 days	F. 7 mon., { concussion—phrenitis .....	2 days	Hanging and Suffocation:—	•
In Bartholomew's Hospital, labourer, 66, effects of a fracture of his right foot from a stone falling on it, whilst at work in Chiswell-street .....	upwards of 6 weeks	M. 52, { (no inquest—an imperfect return)	•	M. 37, hanging himself by a handkerchief to a bedstead, in temporary insanity.	•
Labourer, 36, accidentally killed by a heavy stone falling on him .....	•	M. 52, { hemiplegia .....	2 days	F. 37, strangled by her husband.	•
This return is deficient in particulars.		M. 52, { fractured cranium (no inquest) .....	•	Currier, 22, hanged himself with a handkerchief from the air-grating of a cell, being at the time of unsound mind.	•
In St. George's Hospital, shoemaker, 80, inflammation following lacerated wound over left eyebrow—knocked down when crossing Park-lane by the pole of a carriage drawn by two horses, and trampled on by the horses, 6 days	6 days	How was the fracture caused?	•	Daughter of a musician, 7 mon., suffocated accidentally in bed, being laid to sleep.	•
In Middlesex Hospital, tailor, 83, injuries of the head from being wilfully knocked down by a private cabriolet on March 25th, in Hanover-square—verdict of Manslaughter against the unknown driver. The time from injury to death should have been stated.	•	Wounds:—	•	Daughter of a greengrocer, 11 weeks, accidentally suffocated in bed.	•
		Butler, 44, temporary insanity—cut his throat with a razor—found dead in his bedroom.	•	Burns and Scalds:—	•
		Coatmonger, 44, mental derangement—suicide by a stab in the belly with a knife—liver penetrated (post mort.) .....	about 1½ hour	In St. George's Hospital, daughter of a labourer, 8, burns of the upper extremities—a spark flew from a wood fire, and ignited her pinafore 9½ hours	9½ hours
		In Bartholomew's Hospital, shoe-maker, 32, stabbed in the belly with a knife at Moor-lane, Cripplegate (post mort.) .....	3 days	In Middlesex Hospital, F. 25, burns from a candle on the floor firing her clothes as she stooped at work .....	14 days
		In Bartholomew's Hospital, screw-cutter, 27, laceration of the fore-finger of his left hand, whilst cleaning his machine, which was in motion (at Gray's Inn-road) .....	14 days	Daughter of a cabinet-maker, 3, congestion of the brain from fright, produced by a pot of hot coffee accidentally falling upon and scalding her .....	•
		Pauper, 65, suicide by cutting his throat with a table knife (being insane) .....	5 days	M. 1, { severe scald of the upper part of the chest, from boiling broth .....	20 days
		Drowning:—	•	M. 1, { gangrene supervened (no inquest) ..	•
		Son of a whitesmith, 10, drowning—went into the Thames to rescue his brother, who had fallen in .....	under water about 50 minutes	Daughter of a clergyman, 1, scald .....	•
		Son of a carpenter, 12, drowning—fell into the Grosvenor Canal, when at play on some floating timbers .....	under water about 45 minutes	Poison:—	•
				M. 17, suicide by taking arsenic, whilst in temporary mental derangement .....	•

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
F. 13, { natural—died suddenly—no medical aid.	12 hours	F. 1, natural death from convulsions .....	•	F. 1, natural death—convulsive fit from congestion of the brain from teething .....	10 hours
M. 7 mon., { natural death from teething—convulsions .....	•	M. 4 mon., natural death—convulsion fit from fright .....	almost instant	M. 60, natural death from affection of the heart .....	•
F. 72, apoplexy .....	•	M. 68, natural death—diarrhoea .....	•	M. 47, natural death—sudden—consumption ..	•
M. 32, purpura hemorrhagica .....	•	M. supposed 60, natural death—sanguineous apoplexy (post mort.) .....	•	M. 32, natural death—rupture of a blood vessel of the liver, resulting from habits of intemperance .....	•
M. 70, natural death from apoplexy .....	•	M. 8 weeks, natural death—congestion of the brain .....	•	M. 68, natural death—apoplectic fit .....	12 hours
M. 4, natural death by the visitation of God, in a fit .....	•				

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. 24, natural causes .....	•	Child (age and sex unknown), no evidence to prove that it was born alive .....	•	F. 53, natural death by the visitation of God ..	•
M. 4 mon., natural causes, died .....	suddenly			M. stillborn .....	•

### TWELVE HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

St. George's H.:—	duration	Middlesex H.:—	duration	Middlesex H. (continued):—	duration
M. 31, disease of the heart and kidneys .....	•	M. 48, delirium tremens .....	4 days	M. 65, bronchitis and emphysema—morbus cordis .....	1 month
Westminster H.:—	•	M. 78, chronic affection of the brain with fits, 5 months	5 months	F. 18, petechial fever .....	10 days
M. 29, phthisis pulmonalis .....	•	M. 25, bronchitis acutus, complicated with erysipelas of the face .....	10 days	F. 52, bronchitis—emphysema—morbus cordis, 6 weeks	6 weeks
F. 24, chronic peritonitis .....	6 weeks	M. 62, { emphysema of both lungs .....	•	F. 16, intussusception .....	14 days
Charing Cross H.:—No deaths registered.		M. 62, { serous infiltration under the arachnoid, and at the base of the brain (p.m.)	•		

**TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued):—**

<b>University College H.:</b>		<b>King's College H.:</b>		<b>St. Thomas' H.:</b>	
M. 37, morbus cordis—albuminuria	duration	M. 38, phthisis pulmonalis	duration	F. 23, pleuro-pneumonia	duration
F. 32, {Bright's disease splenitis	4 months			M. 40, phthisis (post mort.)	6 months
F. 49, phthisis—ulceration of the trachea		<b>Bartholomew's H.:</b>		M. 45, sweep's cancer	
<b>Fever H.:</b>		M. 34, granular kidneys and erysipelas		M. 23, pleuro-pneumonia	
F. 24, {fever—in hospital 22 days. atrophy of liver—granular kidneys— injection of stomach and ilium (p.m.)		F. 51, dropsy (post mort.)	4 weeks	<b>Dreadnought H.:</b>	
<b>Small Pox H.:</b>		F. 25, jaundice (post mort.)	2 weeks	M. 21, {paraplegia—retention of urine suppuration about neck of bladder, with several false passages	20 days
F. 31, {small pox natural—semi-confluent eum delirio. passed by stool two half-pennies, a sibling and n sixpence.	14 days	F. 28, phthisis		M. 28, phthisis (post mort.)	6 days
		<b>London H.:</b>		M. 47, phthisis (post mort.)	3 months
		M. 41, {paraplegia synochus	7 years 10 days		

NOTE.—The returns of the causes of deaths in Guy's Hospital are imperfect, and are therefore discontinued for the present.

**DISTRICTS OF ST. JAMES, WESTMINSTER; AND ST. MARY-LE-BONE:—**

**CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.**

<b>Berwick Street:</b>		<b>All Soul's (continued):</b>		<b>Christ Church:</b>	
M. 32, phthisis	3 months	M. 1, {pertussis pneumonia	3 weeks 1 week	M. 10 mon., diarrhoea	4 days
M. 1, dentition		F. 33, phthisis	12 months	M. 6, {rubeola pneumonia	2 weeks 6 days
M. 65, paralysis—gradual decay	3½ years	M. 64, suddenly in a fit—ill and insensible about 1 hour natural disease of the brain.		M. 3, pneumonia from whooping cough	5 weeks
<b>Golden Square:</b>		M. 2, pertussis	5 weeks	M. 11 mon., bronchitis	7 days
M. 36, consumption	2 years	<b>Cavendish Square:</b>		M. 16 hours, premature birth.	
M. 56, dropsy		F. 3 mon., irritation of the intestines	3 days	M. 3, scarlet fever	5 days
M. 73, bronchitis scilicet	2 years	F. 1 mon., disease of the heart	3 weeks	M. 9 mon., scarlatina	7 days
M. 1, {dentition effusion on brain		<b>The Rectory:</b>		M. 1, bronchitis	6 days
M. 3, {whooping cough consumption	6 months	M. 10 mon., hydrocephalus	10 weeks	F. 72, disease of the liver	many years
F. 23, debility after childbirth		M. 9 wks., pneumonia	5 days	F. 1, marasmus	10 months
F. 68, {chronic rheumatism paralysis	about 11 months	M. 42, scirrhus of cardia	6 months	F. 1 hour, premature birth.	
F. 65, cancer uteri		M. 45, softening of the brain (post mort.)		F. 75, disease of the heart	5 years
F. 84, debility from age		M. 25, phthisis (post mort.)		F. 13, {fever bronchitis	10 weeks 7 days
F. 73, hæmorrhage from the lungs		M. 36, typhoid pneumonia		F. 1, convulsions	2 days
F. 41, malignant tumour in the abdomen	4 years	M. 45, phthisis (post mort.)		F. 67, bronchitis	6 months
F. 46, paralysis—trismus		F. 1, scarlatina, terminating in laryngitis on 6th day		<b>St. John's:</b>	
<b>St. James's Square:</b>		F. 3, croup	24 hours	M. 45, {pneumonia convulsions	6 days 12 hours
M. 32, dropsy		<b>St. Mary:</b>		M. 6 mon., {head not properly formed. convulsions	from birth
M. 88, natural decay.		M. 1, pneumonia	14 days	M. 10 wks., gastritis	3 days
F. 3, {lowness and exhaustion. congestion of lungs—under medical care 11 days.	2 months	M. 7 mon., inanition	7 months	M. 3 mon., diarrhoea	2 days
F. 77, decay of nature.		M. 8 mon., convulsions		M. 72, cholera biliosa	3 days
F. (age not stated), convulsions		M. 32, {granular disease of kidney effusion into brain		F. 16, {amorrhœa fever, with congestion of the head	2 weeks 3 days
<b>All Soul's:</b>		F. 5 mon., inflammation of the lungs		F. 2, {inflammation of lungs laryngitis	3 days 12 hours
M. 69, chronic inflammation of the mucous membrane of the bladder, with ulceration, albuminuria (post mort.)	2 years	F. 1, pneumonia	14 days	F. 5 mon., convulsions from teething	24 hours
M. 84, natural decay (not certified, no medical attendant).		F. 83, old age		F. 41, atrophy	6 months
		F. 40, erysipelas—inflammation of the mem- branes of the brain	8 days	F. 1, inflammation of lungs	11 days

**DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, STONE, DIABETES, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, ETC.**

<b>Small Pox:</b>		<b>Typhus:—(continued)</b>		<b>Hernia:</b>	
F. 2, variola confluent (not stated whether vac.)	11 days	F. 11, yellow fever		F. 65, {strangulated femoral hernia operation	5 days 18 hours
M. 6, {small pox (2nd attack, without pre- vious vaccination) tabes mesenterica		M. 25, synochus—effusion on the brain	7 days	F. 52, {old ventral hernia strangulation	12 years 3 days
F. 1, small pox (without previous vaccination)		F. 38, brain fever	7 days	F. 52, {operation gangrene	27 hours
F. 3, {small pox (without previous vaccina.) (no medical attendant.)	14 days	M. 28, {bilious fever typhus	23 days 17 days	<b>Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.</b>	
M. 1, {small pox abscess in the throat	14 days	F. 68, low fever	3 weeks	F. 34, {childbirth peritoneal inflammation	8 days
M. 2, small pox, natural	13 days	F. 2, {common continued fever purpura	8 days 2 days	F. 39, {childbirth puerperal fever	2 days
F. 1, small pox, natural	10 days	<b>See above.</b>		F. 39, {childbirth hæmorrhage—placenta presentation, (post mort.)	18 days
F. 3, confluent small pox (not vaccinated)	8 days	<b>Other cases of Fever, not assigned to Typhus in abstract:—</b>		F. 19, puerperal typhus	3 days
<b>See above.</b>		F. 68, febris remittens		F. 39, {childbirth rupture of womb	1 hour
<b>Typhus:—</b>		F. 6, {remittent fever meningitis	3 weeks 5 days	F. 36, puerperal fever after premature labour	1 week
F. 1, {fever and dentition pneumonia	5 days 3 days	F. 2, {hydrocephalus convulsions	2 weeks 2 days	F. 41, acute puerperal mania	14 days
In Guy's Hospital, M. 42, fever		F. 2, infantile remittent fever		F. 36, {uterine phlebitis peritoneal inflammation	4 days 1 day
F. 3, {fever bronchitis	28 days	F. 53, {enterocœle synochus—exhaustion	5 weeks 14 days	<b>The deceased was delivered of male twins on 17th May ult. One has died since, with symptoms of pneumonia. See above.</b>	
F. 65, bilious fever	3 weeks	F. 22, {strumous disease typhus gravior		<b>Cases of childbirth, supervening on disease:—</b>	
M. 50, brain fever	7 days	F. 71, hydrothorax	11 weeks	F. 28, {phthisis puerperal insanity	
F. 8, fever—congestion of the brain	2 weeks	<b>Syphilis:—</b>		F. 31, {spinal curvature and diseased lungs, several years exhaustion after childbirth	3 days
M. 57, typhus fever	15 days	F. 29, exhaustion produced by the venereal dis- ease		F. 29, {consumption confinement	some months 3 days
M. 1 mon., fever with convulsions	2 days	M. 28, syphilis		<b>Delirium tremens:—</b>	
F. 5, fever—effusion on the brain	5 days	F. 1 mon., secondary syphilitic disease		M. 49, delirium tremens	
F. 29, fever	7 days	<b>Hæmorrhage:—</b>		F. 29, {delirium tremens paralysis	3 months 8 hours
F. 50, typhus	7 days	M. 7 weeks, epistaxis	10 days	F. 25, delirium tremens	4 days
F. 17, fever, inflammatory	9 days	<b>See above.</b>		<b>Intemperance:—</b>	
F. 4 mon., fever	10 days	<b>Malformation:—</b>		<b>(See Inquests.)</b>	
M. 5, fever	5 days	M. 14 days, {spina bifida convulsions	congenital 36 hours	<b>Privation:—</b>	
F. 5, typhus fever	11 days	F. 14 days, {termination of intestine in the bladder, probably, but there was no post mort. exam.		M. 34, insane, exhaustion caused by refusal of food	13 days
F. 72, typhus fever		F. 1, hydrocephalus		<b>Other causes:—</b>	
F. 8, typhus fever		M. 3 days, {extravasation of urine from mal- formation of urethra		M. 8 mon., {inflammation of the lungs gangrene of a blister	3 weeks 2 weeks
M. 2, {synochus meningitis	2 weeks 4 days	F. 8 days, spina bifida			
M. 3, typhus		<b>See above.</b>			
F. 39, {fever pneumonia	4 weeks 3 weeks				
F. 55, febris					
F. 2, febris					
M. 31, fever					
M. 5, fever					
M. 55, malignant fever	14 days				
F. 20, continued fever (an open ditch is near the house)					

**RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.**

<b>In Guy's Hospital, M. 21, peritonitis, resulting from perforation of the stomach (post mort.)</b>		<b>M. 32, {hypertrophy of the heart aorta dilated</b>		<b>M. 14, {mesenteric disease and diseased lung, nearly 3 yrs. suppuration of mesenteric gland, dis- charging itself into intestine</b>	
M. 66, pneumonia and diseased kidneys		F. 1, encephaloid tumor in the kidney	3 months	peritonitis from perforation	4 hours
M. 60, ramollissement and diseased arteries of the brain		F. 56, phthisis pulmonalis, tubercles and cavities in both lungs, ulceration of ilium and jejunum abt. 8 mon.		incipient phthisis	2 months
		F. 3, peritonitis—tumour	17 months	synochus	10 days
		F. 1, hydrocephalus	1 year	M. 14, {tubercle and emphysema of lungs— serous effusion on brain—strumous abscess in left kidney	
		F. 44, cancer of uterus and rectum	16 years	M. 63, hypertrophy of the left ventricle—melæna	
		F. (age not stated), {cirrhosis—extensive adhesions of the abdominal viscera	16 years	F. 1, teething—convulsions	10 hours
		hamatemesis, florid blood	2 days	M. 2, {chronic meningitis acute	3 or 4 months 14 hours
		F. 33, fungoid disease of lumbar gland

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	} See General Remarks.	Cloudless throughout the day.
MON.	Nothing shown till 5h. p.m., when it was positive with moderate tension. During the rest of the day the tension was frequently strong. The maximum at 7h. 20m. p.m.	} See General Remarks.	The sky was clear till 5h. p.m., from which time till nearly 11h. p.m., about one-fifth part was covered with cirrostratus. It was overcast at midnight.
TUES.	Positive throughout the day. The tension was strong till about noon, but from 1h. to 7h. p.m. it was very weak. Tension strong during the rest of the day.	} See General Remarks.	Cirrostratus and fleecy clouds covered the sky till 7h. a.m., when it became cloudless, and continued so during the remainder of the day.
WED.	Positive and tension very strong throughout the day. The maxima at 9h. 20m. a.m., and 7h. 20m. p.m.	} See General Remarks.	With the exception of a few cirri and fleecy clouds during the afternoon and evening, the sky was cloudless throughout the day.
THURS.	Positive and tension very weak throughout the day. The maxima at 7h. 20m. p.m.	} See General Remarks.	A few cirri and fleecy clouds were visible about noon, and it became overcast shortly before midnight; with these exceptions the sky was cloudless throughout the day.
FRID.	Positive throughout the day. The tension was at times strong, especially from 1h. p.m. to 7h. 20m. p.m.	} See General Remarks.	Overcast till 5h. a.m., from which time cirrostratus and vapour covered about two-thirds of the sky till 4h., when it was again overcast. The sky was generally clear from 6h. till midnight. A fog prevailed during the morning.
SAT.	Positive and moderately active till 1h. 20m. p.m. Negative and tension very strong from 3h. to 5h. 20m. p.m. Positive and tension weak at 5h. 21m. p.m. During the remainder of the day no electricity was shown.	} See General Remarks. A large cumulostratus covers nearly the whole sky. } See General Remarks.	Cirrostratus and vapour covered a small portion of the sky till 9h. a.m., from which time till 6h. p.m. about two thirds were covered with cirrostratus, fleecy clouds, and occasionally large cumulostrati. It became overcast about 7h. 30m. p.m., and continued so during the rest of the day. At 6h. 53m. a.m. the upper arc of a solar halo was visible. Radius = 22°. It disappeared in two minutes afterwards. Thunder was heard at 2h. 30m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 65.3; and the mean reading at 7h. 30m. P.M., was 70.9; the mean readings at the Royal Observatory for the same times were 62.1 and 70.3 respectively.

† The mean direction of the wind for the week is E.N.E.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, June 27th, 1846.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 25, (ending Saturday, June 20th).												
NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.												

CORONERS' RETURNS OF DEATHS BY VIOLENCE.			
NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."			
Fractures and Contusions:—		duration	
In Bartholomew's Hospital, bricklayer's labourer, 55, injury to the spine by an accidental fall from a scaffold. .... *			
In St. Thomas's Hospital, mill-sawyer, 54, crysipelas from a scalp wound caused by a fall while intoxicated in Cannon-street (p.m.)	14 days		
In Guy's Hospital, bricklayer's labourer, 50, fracture of his skull, caused by falling from the top of a house into Bartholomew-lane, whilst he was throwing a piece of lead down into the street .....	10 hours		
In Guy's Hospital, painter, 62, compression of his brain caused by falling from a ladder on which he was at work at Walworth. ....	4 hours		
In Guy's Hospital, potman, 31, delirium tremens and a fall from his chair in a fit of epilepsy, causing dislocation of his right ankle and fracture of his leg (at Blackheath-rd.)	4 days		
In Guy's Hospital, labourer, 51, fracture of his left thigh by falling from a ladder at Marlborough-place, Walworth-road, whilst working there .....	3 weeks		
In St. Thomas's Hospital, labourer, 22, internal injuries caused by a cask of red lead falling on his belly from a cart at Galley-quay .....	32 hours		
In Guy's Hospital, fireman on the Dover Railway, 23, the left leg torn off by being jammed between an engine and tender, whilst tending a train on the Dover Railway, near the Greenwich junction, in consequence of the said engine running against another engine that was disabled and stationary .....	19 days		
Fractures and Contusions (continued):		duration	
In St. Thomas's Hospital, engine-cleaner on the Greenwich Railway, about 45, fractures of both legs, and injury to his private parts by a train passing over him at Greenwich, he having slipped off the platform whilst fastening a carriage-door .....	about 2 hours		
In Guy's Hospital, son of a hawker, 4, run over by a cart whilst crossing the road in Kent-street, Borough, causing injuries to the abdomen .....	a few minutes		
Son of a waggoner, 15, injury to his brain by falling from the tail of a waggon on the back of his head, whilst at play in Webb-street, Borough .....	7 hours		
In St. Thomas's Hospital, son of an ostler, 16, injuries caused by a cart wheel jamming him against the kerb in Botolph-lane—he having slipped down whilst running .....	a few min.		
In St. Thomas's Hospital, cabinet-maker, 31, injury to his spine by falling from a chaise which was upset at Sutton, in consequence of the horse taking fright .....	15 hours		
F. 6, concussion of the brain—effusion .....	4 months		
This return is defective (no inquest).			
F. 71, { fracture of the neck of the thigh-bone (no inquest) .....	6 weeks		
The Registrar adds, that "the deceased had been twice paralysed, and was very lame—and she slipped down when walking across the room with a stick."			
Wounds:—			
M. 76, suicide by cutting his throat in temporary derangement.			
M. 62, suicide by cutting his throat in temporary derangement.			
Drowning:—			duration
M. 16, accidentally drowned while bathing. Silk-velvet weaver, 34, drowned himself in the Regent's Canal in a state of temporary insanity.			
Son of a shoemaker, 8, accidentally drowned while playing on the steps of Blackfriars-bridge.			
M. about 2, accidentally drowned by falling into a water-butt.			
M. 21, found dead in the River Thames, apparently from drowning—no marks of violence.			
Suffocation:—			
M. 67, suffocation by accidentally falling from a plank placed between the wharf and a brig, into the mud on the shore of the Thames.			
Son of a mariner, 2, accidental death from the kernel of a hazel nut lodging in the wind-pipe .....	*		
Burns and Scalds:—			
In St. Thomas's Hospital, daughter of a policeman, 6, burnt by her clothes taking fire, whilst stirring the fire in her father's kitchen in Deptford. ....	8 hours		
M. 1, accidental scald on the chest .....	3 weeks		
Poison:—			
F. 30, suicide by essential oil of bitter almonds (1 oz.), temporary derangement. ....	2 hours		
M. 52, shock sustained by the nervous system from bathing his feet in cold water while heated, and drinking largely at the same time of cold fluid (no inquest). .... *			
In Guy's Hospital, M. servant, 39, shock to his nervous system, caused by an operation being performed on another patient in the same ward at Guy's Hospital (post mort.)	2 days		

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.												
M. 58, natural causes—probably apoplexy. .... 20 min.	duration			F. 43, natural—supposed from apoplexy. .... ½ hour	duration			P. 56, natural death—effusion of blood on the brain. .... 2 hours	duration			
M. 18, found dead—regurgitation of blood in the lungs from natural causes. .... *				M. 63, natural death from apoplexy. .... sudden				F. 78, natural death—disease of the heart—dropsy and ulcerated legs. .... *				
M. 28, natural—disease of the head; became suddenly insensible, and died in. .... 1 hour				F. 68, gangrenous state of her right leg—death accelerated by neglect to call in medical aid. .... *				M. 66, apoplexy. .... sudden				
F. 41, hæmorrhage from the womb during natural parturition of a stillborn child died in 3 hours				M. 16 wks., natural—probably convulsions. .... *				F. 48, disease of the heart. .... sudden				
F. 38, natural—died in a fit. .... *				M. 66, natural death—apoplexy. .... *								
				F. 40, natural death—rupture of a blood vessel of the heart. .... 10 min.								

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.												
F. 46, natural—had a fit of insensibility, and died in. .... 2 hours	duration			F. apparently between 20 and 30, unknown—the body found in a very advanced state of decomposition, in the Thames.	duration			M. 72, natural death—decay of body.	duration			
(no previous illness)								M. 30, natural—no previous medical treatment—brought from the street in a cab and died in 1 hour				

TWELVE HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.												
St. George's H.:—(No deaths registered.)	duration			University College H.:—	duration			London H.:—	duration			
Westminster H.:—				F. 40, { phthisis. .... 4 years				M. 49, { enormous dilatation and softening, with hypertrophy [of heart]. .... *				
M. 40, encephaloid disease of lungs. .... *				renal disease. .... 18 months				cedema pulmonum (post mort.) .... 5 months				
Charing Cross H.:—				Fever H.:—				congenital malformation of heart, atrophy of right auricle and ventricle and pulmonary artery—hypertrophy of left ventricle—slight hypertrophy of left auricle—large communication between both ventricles (post mort.)				
F. 53, cirrhosis of the liver (post mort.) .... 9 months				M. 20, { fever. .... 25 days				M. 10, {				
Middlesex H.:—				in hospital. .... 10 days				acetic.				
M. 54, bronchitis—albuminuria. .... 10 weeks				Small Pox H.:—(No deaths registered.)				M. 62, hernia. .... *				
M. 54, chronic pleuritis on left side with sero-purulent effusion—adherent pericardium—tubercles at apex of right lung. .... *				King's College H.:—								
(Query.—Was there a post mort. examin.?)				M. 32, heart disease—congestion of the lungs. .... *								
F. 56, cancer in mamma. .... 1½ year				M. 32, softening of the spinal cord. .... *								
				Bartholomew's H.:—								
				M. 30, crysipelas of the head and face. .... *								
				M. 6, general dropsy and enlarged spleen. .... *								

**TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS (continued):—**

*London H. (continued):—*

	duration
M. 55, consumption	6 months
M. 16, purpura	9 weeks
F. 49, cerebritis	8 days
F. 42, {hypertrophy and dilatation of heart ascites (post mort.)	6 months 4 months

*St. Thomas' H.:—*

M. 60, atrophy of one kidney, and a large cyst communicating with the bladder—consequences of stricture	*
---	---

*St. Thomas' H. (continued):—*

	duration
M. 56, {tubercles and cavities in upper lobe of right lung	1 year
F. 17, syphilis	3 days
F. 60, erysipelas	*

*Dreadnought H.:—*

M. 39, {diseased bladder and kidneys ascites recto-vesical fistula (post mort.)	3 years 2 weeks
---	--------------------

*Dreadnought H. (continued):—*

	duration
M. 19, {bubo erysipelas of groin	11 weeks 1 week
M. 61, {arthritis—double pneumonia (p.m.) cough—dyspnoea scirrhous deposit in the cardiac end of stomach, liver, and both lungs (p.m.)	10 weeks

NOTE.—The returns of the causes of death in Guy's Hospital being imperfect, are discontinued for the present.

**DISTRICTS OF ST. PANCRAS, ISLINGTON, HACKNEY, ST. GILES IN THE FIELDS, AND ST. GEORGE, BLOOMSBURY:—**  
CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

*Tottenham:—*

	duration
M. 2 wks., {diarrhoea pneumonia	5 days 2 days
M. 3, whooping cough	*
M. 60, ossification of the aortic valves—hypertrophy of the heart, with dilatation (p.m.)	*
M. 36, phthisis pulmonalis	3 to 4 months
M. 4 mon., phthisis from birth—inguinal hernia	6 weeks
M. 27, phthisis	4 years
F. 76, {apoplexy paralysis	*
F. 2, whooping cough	*
F. 7, hydrocephalus	5 weeks
F. 3 mon., {diarrhoea convulsions	*
F. 34, phthisis	6 days

*Gray's Inn Lane:—*

M. 13, tubercular peritonitis (post mort.)	4 days
M. 41, phthisis—in hospital 2 months.	*
M. 24, cirrhosis—in hospital 4 days.	*
M. 35, diseased liver and kidneys—in hospital 1 week	*
M. 18, pleurisy—empyema (post mort.)	7 weeks
M. 50, phthisis	2 years
F. 30, original disease uncertain	*
F. 1, {measles pneumonia	2 weeks 9 days
F. 35, phthisis pulmonalis	14 months
F. 41, carcinoma uteri—in hospital 26 days.	*
F. 23, phthisis—in hospital 2 months.	*

*Somer's Town:—*

M. 63, general visceral disease (liver)	3 weeks
M. 70, bronchitis—old standing	*
F. 4, {hypertrophy of the heart irritation of brain and lungs	6 months
F. 44, phthisis	6 months
F. 7 days, stoppage of the bowels	7 days

*Caunden Town:—*

M. 85, palsy—icterus	*
M. 56, softening of the brain	*
M. 5 mon., {diarrhoea effusion on the brain	4 days
F. 38, phthisis	14 months
F. 57, disease of the heart and lungs	many years
F. 61, senile debility	*
F. 65, {paralysis diseased brain	*
F. 45, diseased heart (valvular)	*

*The Regent's Park:—*

M. 4, {irritative fever congestion of brain convulsions	14 days
M. 5 mon., {convulsions watery gripes	5 days
M. 15, hypertrophy of the heart	*
F. 2, whooping cough	*
F. 4, pneumonia—phthisis	*

*The Regent's Park (continued):—*

	duration
F. 46, {phthisis pulmonalis chronic pleurisy tubercular peritonitis (post mort.)	about 18 months *

*Kentish Town:—*

M. 14, consumption (not certified)	*
M. 24, disease of the stomach and alimentary canal	about 12 months
M. 4 mon., aphthous ulceration of the intestine	14 days
M. 60, {a variety of secondary affections, too difficult to describe	*
F. 16, {inflammation of the lungs ulceration of the chest, &c., &c.	2 days
F. 2, bronchitis	*
F. 18, epilepsy	4 years
F. 60, yellow fever	40 hours
F. 69, insanity and softening of the brain	24 years
F. 48, scirrhus of the tongue	4 years
F. 1, mesenteric disease	some months
F. 61, inflammation of the lungs	1 week

*Islington West:—*

M. 3, {measles pneumonia and enteritis	3 weeks
M. 52, {liver disease ascites	3 years 6 months
M. 10 mon., {hydrocephalus teething	9 days
M. 68, ramollissement cerebral—diseased prostate	*
M. 48, phthisis	*
M. 5 wks., {thrush convulsions (not certified)	*
F. 1½ hrs., {convulsions premature birth, attended by a midwife	*
F. 62, {cachexia oedema	2 years
F. 2, {scarlet fever hydrocephalus	16 days 12 days
F. 5, {whooping cough inflammation of lungs	8 weeks
F. 1, {measles pneumonia	12 days
F. 53, disease in the nervous system and debility.	*
F. 32, {phthisis ascites and anasarca	*

*Islington East:—*

M. 9 mon., disease in the bowels	*
M. 24 hrs., {long-continued pressure on the head during tedious labour	*
M. 2, pertussis	2 weeks
M. 1, {enteritis—diarrhoea convulsions	10 days 1 day
M. 49, paralysis	18 months

*Islington East (continued):—*

	duration
M. 73, {dementia exhaustion	about 2 years 2 days
M. 87, decay of life	*
M. 27, {gout inflammation of the brain	5 days
M. 37, rheumatism—apoplexy	*
F. 47, consumption	*
F. 4, disease in the bowels	*
F. 24, consumption	6 months
F. 69, paralysis and decay of nature—last attack	8 days

*Hackney:—*

M. 31, {bronchitis ileus	3 days 4 days
M. 11 mon., measles	*
M. 34, phthisis	*
F. 13, scarlet fever	3 days
F. 1, {congestion of the brain hydrocephalus	*
F. 8 mon., effusion of water in the brain and chest	10 hours
F. 5, {fever congestion of brain	1 week

*Stamford Hill:—No deaths registered.*

*Soath Hackney:—No deaths from disease registered.*

*West Hackney:—*

F. 2, infantile remittent fever	6 days
F. 31, {disease of the heart general dropsy	8 months 2 months
F. 79, age and debility	17 weeks

*Stoke Newington:—*

M. 47, suppression of urine (post mort.)	*
--	---

*South St. Giles in the Fields:—*

M. 12, gastro-enteritis, accompanied by fever of a typhus character	*
M. 14, consumption	10 months
M. 7, rheumatic fever	*
F. 5, diseased lungs	*
F. 72, debility and decay (not certified, no medical attendant).	*
F. 65, fever	9 days

*North St. Giles:—*

M. 9 mon., dentition	1 month
M. 1, teething and whooping cough (not certified)	*
F. 24, typhoid fever	17 days
F. 1, convulsions	2 hours

*St. George, Bloomsbury:—*

M. 1, teething—congestion of the brain	7 days
M. 3 mon., diarrhoea—infantile remittent	5 days
F. 5 mon., pneumonia	5 days
F. 1, convulsions from teething (not certified) abt. 14 ds.	*
F. 7 mon., acute hydrocephalus	7 days
F. 48, bronchitis (not certified)	3 months

**DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HEMORRHAGE, MALFORMATION, HERNIA, DIABETES, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, ETC.**

*Small Pox:—*

	duration
F. 7 mon., variola (not stated whether vaccinated)	8 days
F. 7 mon., {variola eruption	12 days 10 days

*Typhus:—*

M. 21, {fever inflammation of lungs and diaphragm	17 days 5 days
F. 28, typhus fever	*

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Nothing shewn during the morning; slightly positive after noon till midnight.	See General Remarks	The sky was overcast till 10h. 30m. a.m., from which time until 11h. 0m. a.m. (with the exception of a few light clouds) the sky was cloudless; afterwards it became suddenly overcast, and continued so till midnight. Several flashes of lightning were observed after 8h. p.m.
MON.	Nothing shewn till 6h. a.m.; positive with moderate tension from 6h. a.m. till 9h. p.m.; the maximum occurred during the evening. Alternately positive and negative; sparks in abundance; galvanic currents.	See General Remarks. A thunder-storm occurred.	Overcast till 7h. a.m., when the clouds became broken in several places; at 8h. a.m. the sky was cloudless; between 9h. a.m. and 6h. p.m. cumuli, cumulostrati, and scud prevailed in large quantities; from this time till midnight the sky was nearly overcast. Thunder was heard in the S.E. at 9h. 20m. p.m., and it continued with frequent flashes of lightning until 11h. 20m., when a storm occurred, accompanied with heavy rain, and continued till midnight. The electrical instruments were violently agitated.
TUES.	Nothing was shewn till 10h. 55m. a.m., when rain began to fall heavily, and the electricity became very active, with frequent galvanic currents. It continued very active till after 2h. p.m., during this time the electricity was negative, and rain fell heavily. It was variable during the rest of the day, but occasionally negative and very active.	See General Remarks.	The thunder-storm continued until 6h. 15m. a.m.; no lightning was seen after this time; rain however continued falling till 6h. a.m.; from 3h. 30m. a.m. till midnight three-fourths of the sky were covered. The prevailing clouds were cirrostratus, cumulostratus, and scud. Rain fell at 9h. 45m. a.m. and at 3h. 20m. p.m. Flashes of lightning were seen in the S.E. at 11h. 20m. p.m.
WED.	Positive, but tension weak till 6h. a.m.; nothing was shewn from this time till noon. It was positive and moderately active during the evening, but very weak about midnight.	See General Remarks.	The amount of cloud was variable until 8h. a.m., from which time till 3h. 50m. p.m. the sky was overcast; afterwards the clouds became slightly broken till 5h. p.m., and the sky was overcast from this time till midnight. The prevailing clouds during the day were cirrostratus, cumulostratus, decaying clouds, and scud. Rain was falling slightly at intervals from 11h. 30m. a.m. till 3h. 30m. p.m.
THURS.	At 9h. 30m. the electricity became suddenly very active, and continued so till 11h. 5m. a.m., with slight galvanic currents and large blue sparks. With this exception, nothing was shewn till 7h. 20m. p.m., when it was slightly positive throughout the rest of the day.	See General Remarks.	Three-fourths of the sky were covered with cloud till 2h. 20m. p.m., except from 6h. a.m. till 8h. a.m., when the sky was cloudless, and it was again nearly cloudless from 3h. 30m. p.m. till midnight. The prevailing clouds were cumuli, cirri, and masses of scud. Frequent peals of thunder were heard from 3h. 30m. till 5h. 30m. p.m.
FRID.	Positive and tension strong from 5h. 20m. a.m. to 7h. 20m. a.m., and at 9h. p.m. Nothing was shewn at any other time during the day.	See General Remarks.	Cloudless till 1h. 30m. a.m.; from this time till 7h. a.m. the amount was variable; overcast afterwards till midnight. A few drops of rain fell between 1h. p.m. and 2h. p.m.; at 6h. 30m. rain commenced falling heavily, and continued till 9h. p.m.; a few drops fell at intervals till midnight. At 6h. 20m. a.m. the upper part of a solar halo was visible. Radius 26°: It continued visible for 23m.
SAT.	Nothing was shewn till 7h. a.m., when it was positive with tension strong. It continued so during the rest of the day. The max. occurred at 9h. 20m. a.m.	See General Remarks.	The sky was overcast until 6h. a.m., when the clouds became broken in several directions, and one-half of the sky remained covered till noon, when it again became overcast; from 1h. 30m. p.m. till 5h. 30m. p.m., about three-fourths were covered; nearly cloudless afterwards till midnight. The prevailing clouds were cirrostratus, cumulostratus, and scud. Rain was falling slightly between 6h. a.m. and 2h. 30m., and heavily at noon, accompanied with distant thunder, the electrical instruments being considerably affected.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. During the week the maximum thermometer has been deranged. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 59.8; and the mean reading at 7h. 30m. P.M., was 64.3; the mean readings at the Royal Observatory for the same times were 58.4 and 62.4 respectively.

† The mean direction of the wind for the week is S.W., with the exception of Sunday and Monday.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, July 4th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, *except when otherwise stated*. The italics at the end of an entry show the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
F. newly born, not known if born alive—born without medical aid, and sent by a stranger to a house at Holloway ( <i>post mort.</i> )		F. 84, natural—not under medical treatment—had a cold lately		F. 65, natural death	
M. 23, fell in a state of insensibility from the top of an omnibus, and died in	4 minutes	F. 81, natural—became ill and insensible in the street, and died	in a few minutes	F. 5, natural death by the visitation of God	
(no previous disease)		F. 84, natural—found insensible, and died in	3 hours	F. 3 mon., found dead in bed by the side of the mother without marks—no previous symptoms of illness.	
M. 54, natural—fell suddenly, and died after insensibility of	$\frac{1}{2}$ hour	(no previous medical treatment)		M. 5 mon., found dead in bed by the mother's side, without marks (no medical attendant called in).	
(no previous illness—a similar fit of insensibility some months ago)		M. 42, natural—no previous illness within 6 months.	instantly sudden	F. 10, natural death—constitutional debility.	
		M. 74, natural		F. 53, natural causes	sudden
		M. 76, natural—no previous illness.			
		F. 84, natural—found dead—no previous medi-

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension weak at each examination.	See General Remarks.	The sky was nearly covered with cirrostratus and scud until 10h. p.m., breaks of some extent occurring occasionally. Afterwards nearly cloudless till midnight.
MON.	Positive and moderately active about midnight; at other times during the day it was positive, but very weak, and occa- sionally nothing was shewn.	See General Remarks.	The amount of cloud was variable till 2h. a.m., when the sky became overcast, and continued so till 6h. a.m.; about one-half was afterwards covered till 5h. p.m.; cloudless from this time till midnight. The prevailing clouds were cumuli, cirri, and scud. A thin rain was falling at 6h. a.m. Frequent gusts of wind of 4lbs. pressure on the square foot occurred between 3h. 30m. and 5h. 30m. p.m.
TUES.	At 1h. 20m., 3h. 20m., and 5h. 20m. a.m. it was positive and tension moderate; no- thing was shewn at any other times except from 7h. to 7h. 20m. p.m., when it was positive and very active. Rain was falling between these times.	See General Remarks.	The sky was cloudless till 6h. a.m.; afterwards about one-half was covered till 1h. p.m.; nearly overcast from this time till 10h. p.m.; then cloudless till midnight. The prevailing clouds were cumulo-strati, cirrostratus, and scud. Showers of rain fell about 4h. 30m. p.m. and 7h. p.m. From noon till 4h. 30m. p.m. frequent gusts of wind of 2lbs. pressure on the square foot occurred.
WED.	Nothing was shewn till noon: positive and occasionally very weak throughout the rest of the day.	See General Remarks.	At 1h. 30m. a.m. one-half of the sky was covered; nearly cloudless afterwards till 7h. a.m.; overcast afterwards till midnight. The prevailing clouds were cirrostratus and scud. Drops of rain fell occasionally between 9h. 30m. p.m. and midnight. Gusts of wind of 2½ and 3½lbs. pressure on the square foot occurred at intervals throughout the day.
THURS.	Very slightly positive till 9h. a.m.; no- thing was shewn at noon, 1h. 20m. p.m., and at midnight, but at other times it was positive and tension moderate.	See General Remarks.	With the exception of a few breaks of small extent, which occurred about 7h. a.m., at noon, and at 4h. p.m., the sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. Rain fell at 3h. a.m., and at 2h. 40m. p.m. Gusts of wind of 3 and 4lbs. pressure on the square foot occurred between 1h. a.m. and 7h. a.m.
FRI.	Positive and tension strong at 5h. 20m. a.m.; nothing was shewn at any other times during the day.	See General Remarks.	The sky was covered with cirro-stratus and scud till 2h. p.m. Cloudless throughout the remainder of the day.
SAT.	Positive and very active throughout the day. The max. occurred at 5h. 20m. p.m.	See General Remarks.	Cloudless throughout the day.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been out of order during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 61°5; and the mean reading at 7h. 30m. P.M., was 67°7; the mean readings at the Royal Observatory for the same times were 60°5 and 66°8 respectively.

† The mean direction of the wind for the week is S.S.W.

# A TABLE OF Births and Deaths registered in the Metropolis, During the Week ending Saturday, July 11th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 28.]

Causes of Death	Age			Total	Weekly Averages derived from Deaths of 1841-2-3-4-5, and corrected for increase of Population to the middle of 1846.

**EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 27,**  
(ending Saturday, July 4th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

**CORONERS' RETURNS OF DEATHS BY VIOLENCE.**

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

<i>Fractures and Contusions:—</i>	<i>duration</i>	<i>Fractures and Contusions (continued):</i>	<i>duration</i>	<i>Drowning (continued):</i>	<i>duration</i>
In King's College Hospital, smith, 38, fever, and shock following fracture of the skull and left thigh—fell from a staircase window into the area of No. 2, Wilson-street, Drury-lane (supposed to be delirious) (post mort.)	9 days	M. 13, accidental death from contusion of the abdomen, but by what means caused not sufficient evidence .....	*	M. 20, accidentally drowned by going into a pond to bathe .....	3 hours
In London Hospital, labourer, 47, injury to abdomen from accidental fall in a distillery astride on an iron bar .....	*	M. 13, contusions on the abdomen (no inquest—no medical attendant) .....	*	Railway plate layer, 20, accidentally drowned in the Millhead, Nine Elms Mill, when bathing .....	under water 35 minutes
In London Hospital, plasterer, 23, accidental fracture of the spine by fall from a scaffold in the London Docks .....	*	M. 70, { rupture of urethra (post mort.—no inquest) .....	*	Apprentice engineer, 17, wife of a cabman, 27, and wife of a fishmonger, 28, accidentally drowned by the upsetting of a boat on the River Thames (the first under water 10 minutes, the second 14 hours, and the third 50 hours).	
In London Hospital, weaver, 61, accidentally falling down stairs—contused side .....	*	M. 70, { It should have been stated how the rupture was caused.		<i>Hanging and Suffocation:</i>	
In London Hospital, widow, 80, fractured thigh by accidental fall in a passage of a house from the cellar flap being open—partly from old age .....	*	F. 83, { old age. fractured ribs (no inquest) .....	2 days (an imperfect return.)	Widow of a cheesemonger, 35, hanging herself with a handkerchief to the rail of a bedstead, her feet being off the ground—when found, had been dead several hours.	
In London Hospital, dress-maker, 16, concussion of the brain from accidentally falling out of a swing at a fair .....	*	<i>Wounds:—</i>		Widow of a seaman, 65, suffocated by falling down with her neck across a fender, whilst intoxicated .....	died almost immediately
In London Hospital, widow, 54, threw herself out of a second floor window, while in a state of temporary insanity, and fractured her skull .....	5 hours	In University College Hospital, haberdasher, 38, effusion into the brain, consequent upon a wound of the arm from accidentally thrusting it through a pane of glass, while drunk .....	2 days	F. 42, suicide (in unsound mind) by hanging herself with a towel to the curtain-rod of a bedstead .....	about 15 minutes
Wife of a leather-dresser, 45, rupture of a blood vessel in the chest, from falling down stairs by her foot slipping, at Basing-lane, about 2 hrs.		Artist in painting, 60, suicide with a razor by cutting his throat with a razor, while in a state of temporary mental derangement.	*	Coachman, 66, suicide by hanging—not known to be insane, but depressed by destitution.	
Barrister, 46, injuries from falling on area spikes from a window, out of which he had got in a fit of insanity .....	*	M. 88, gangrene sculis—commenced from an accident in cutting the toe nail (no inquest)	*	M. 62, suicide by suspension, in a temporary state of insanity .....	10 min.
Son of a milkman, 1, fracture of skull by an accidental fall from a bayonet .....	*	Wife of a builder (age not known), suicide by cutting her throat with a razor—insane at the time .....	*	F. 12 wks., accidental suffocation—laid to sleep, when her face became imbedded in a pillow.	
Labourer, 55, injuries to the head, caused by an accidental fall, while intoxicated .....	*	{ partly from cutting her throat (in a state of temporary insanity .....	28 hours	M. 3 wks., accidental death from suffocation in bed.	
Labourer, 30, fracture of the skull, by a large quantity of timber falling on him accidentally	instantly	F. 71, { and partly from affection of the lungs, and debility from old age .....	*	F. 3 mon., suffocation, accelerated by disease of the lungs—supposed by accidental pressure against the mother's breast—found dead in bed (post mort.)	
M. 41, accidental death by the fall of a chest of sugar, in the London Docks .....	*	<i>Drowning:—</i>		<i>Burns and Scalds:—</i>	
In London Hospital, labourer, 24, state of collapse—being injured by the accidental falling of a turn-table, while under repair at Brentwood station of Eastern Counties' Railway .....	*	Wife of a skin-dresser, 56, drowning herself in the River Thames, in temporary insanity under water a few minutes		In London Hospital, daughter of a shoemaker, 10, accidentally burnt to death from her clothes catching fire in a room .....	*
In University College Hospital, drayman, 46, meningitis, consequent upon a comminuted fracture of the thigh bone, from being knocked down by a rapid butcher's cart, under the wheels of a van he was driving.	4 days	Son of a labourer deceased, 16, drowned whilst bathing (in the River Thames) under water 60 hours		In London Hospital, weaver's daughter, 5, accidentally burnt to death from her clothes catching fire in a room .....	*
In London Hospital, watchman, 67, partly from contused hand, by being accidentally run against by a horse drawing a cart, and partly from advanced age .....	*	M. S, drowning in Kensington basin—supposed to have fallen in accidentally on the same day.		In London Hospital, wife of a labourer, 35, epilepsy, while under medical treatment for a burn received from her clothes catching fire whilst in a fit .....	*
In London Hospital, carman, 28, accidentally run over by a cart he was driving, when in liquor .....	*	Mahogany-timber-merchant, 39, found drowned—supposed to have been in the water 22 days		In London Hospital, daughter of a scua-boiler, 6, accidental from clothes catching fire from ignited spirits of turpentine .....	*
Barrister-at-law, about 55, concussion of the brain by being thrown from his horse in St. James's Park .....	18 hours	{ suicide by drowning—supposed to have been in the water about 8 hours		In London Hospital, daughter of a sailor, 9, burns from clothes catching fire from spirits of turpentine accidentally ignited .....	*
Spinster, 67, injuries from being accidentally knocked down in the street by a cart wheel (rather deaf) .....	2 hours	35, { temporary insanity, brought on by internal disease .....	*	F. 77, burn of abdomen and chest, and suffocation from the smoke during burning—clothes took fire probably from a candle falling upon her from a table when reading, found in her bedroom in a dying state.	
Turncock to the New River Company, 40, injuries to the loins, from being accidentally run over by an omnibus in the City Road	abt. 10 min.	Son of a tin-plate-worker, 13, drowning while bathing in a gravel pit, out of his depth.		M. 2, scalds by slipping into a copper of hot water accidentally .....	12 hours
M. 75, accidental fracture of the ribs from a cart being overturned upon him .....	1/2 hour	M. about 13, accidentally drowned in the River Thames, by falling off some timber spars.		In London Hospital, son of a labourer, 3, accidental death by scalds on the back .....	*
		M. 8, accidentally drowned in the Regent's Canal Dock, whilst stepping from one barge to another.		<i>Poison:—</i>	
		M. 16, accidentally drowned whilst bathing in the River Lea Cut		Chemist, 23, poisoned himself by taking prussic acid in temporary insanity .....	instantly
		M. 10, accidentally drowned by falling out of a boat in the Regent's Canal basin.		Wife of a police constable, 39, miscarriage from the effects of laudanum, taken by her while under mental delusion .....	*
		F. 25, found dead in the River Lea Cut, without marks—apparently drowned—how caused not sufficient evidence.			
		M. from 40 to 45, suicide by drowning himself in the River Lea, in a state of temporary insanity.			

CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASE OR CAUSE THE PERSONS DIED.

	<i>duration</i>		<i>duration</i>		<i>duration</i>
M. 4 mon., found dead—cause unknown.		M. 3 mon., natural—no previous illness.		M. 1 mon., natural death from disease, the precise character of which was not developed (post mort.)	40 hours
F. 48, natural—no previous illness .....	sudden	M. 2 mon., natural—not under medical treatment .....	sudden	M. 72, natural death from debility .....	*
M. 75, natural—no previous illness .....	sudden	M. (age not stated), natural—no previous illness		F. 4 days, natural death by visitation of God, from natural debility .....	*
M. newly born, no evidence—supposed to have died immediately after or during birth (p.m.)		F. newly-born, not discovered whether it died from natural means, or otherwise, nor by whom exposed, nor of whom born.		M. 13 hours, natural death by the visitation of God .....	*
M. 48, natural—fell suddenly in a news, and was instantly insensible—died without recovery of his senses in .....	13 hours				

# CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

duration		duration		duration	
F. 49, natural—was under treatment for disease of the heart. ....	some weeks ago	F. 43, natural—rupture of a pulmonary blood vessel. ....	*	F. 32, apoplexy, accelerated by drinking ardent spirits. ....	instantly
F. 53, natural death from disease of the heart. ....	*	F. 1 mon., natural—pulmonary apoplexy, hepatization of part of the lung, and congestion of the whole lungs (post mort.). ....	*	M. 29, natural death by the visitation of God in an apoplectic fit. ....	*
F. about 63, natural death, probably from asthma. ....	*	F. 39, { haemorrhage from rupture of veins in the leg. ....	5 minutes	F. 34, internal haemorrhage from separation of the after-birth, previous to the delivery of a stillborn child. ....	*
F. 70, disease of the heart (sudden). ....	*	M. 42, natural—apoplexy. ....	2 1/2 hours	F. 33, natural death in a fit. ....	instantly
F. 1, inflammation of the stomach. ....	*	F. 1, natural—not under medical treatment—subject to fits. ....	*	M. 32, natural death in an epileptic fit. ....	*
M. 55, natural—symptoms of paralysis and apoplexy. ....	3 1/2 hours	F. 1, natural—convulsions. ....	*	M. 31, natural death from a diseased liver—abscess of the liver bursting into the chest (post mort.). ....	*
F. 40, tubercular consumption—no previous medical treatment. ....	*	F. 75, { disease of the brain. ....	3 days	F. 9 wks., natural death in the incipient stage of an eruptive fever, the precise character of which was not developed. ....	*
M. 10, natural—inflammation of lungs (p.m.). ....	*	F. 2, disease of the brain during teething, manifested by convulsions. ....	8 hours	M. 30, natural death from epilepsy (died in the night)—of weak intellect. ....	*
M. 5 mon., natural—disease of the brain. ....	*	F. 58, disease produced by habitual intoxication. ....	6 hours	M. 48, natural death from diseased throat (sudden). ....	*
M. about 29, natural—tubercular disease of the membranes of the brain, and water in the brain, with consumption (post mort.) about 3 weeks. ....	5 minutes	F. 46, pulmonary apoplexy during pregnancy. ....	2 days	F. 53, natural death from disease of the heart. ....	sudden
F. 7 mon., convulsions—found dead in bed. ....	*	F. 30, epilepsy, preceded by delirium tremens. ....	2 days	F. 49, natural death—rupture of a vessel of the heart. ....	instantly
M. 40, suffocation from the bursting of a blood vessel in the lungs. ....	*	M. 3, natural death from whooping cough, in a fit of epileptic character. ....	*	M. 78, natural death from apoplexy. ....	*
M. 16, natural—apoplexy—not under medical treatment. ....	*	F. 6 mon., natural death from inflammation of the stomach. ....	*	M. 43, natural death from apoplexy. ....	*
M. 35, no disease of the heart found, but both auricles full of blood—the left kidney wholly degenerated—no previous illness (post mort.). ....	several months	M. 11, dilatation of the heart, with ossification of the semilunar valves (post mort.). ....	*		

## TWELVE HOSPITALS.—CAUSES OF DEATH BY DISEASE (IN WHICH INQUESTS WERE NOT HELD), AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under foregoing heads are placed deaths in hospitals caused by violence; and deaths in hospitals (by violence or disease) on which inquests were held.

duration	St. George's H.:	duration	University College H.:	duration	London H.:
M. 35, { low inflammation of the brain, with effusion into the ventricles. ....	13 days	M. 46, { chronic phthisis. ....	several years	M. 45, apoplexy. ....	2 days
M. 48, erysipelas. ....	1 year	M. 24, { incipient cirrhosis of the liver. ....	7 months	M. 50, paralysis. ....	4 months
M. 36, aneurism of the aorta bursting into the pericardium (post mort.). ....	more than 7 months	M. 24, { nephritis. ....	1 month	M. 53, disease of the chest. ....	*
M. 21, { scrofulous disease of 4th dorsal vertebra, giving rise to paraplegia. ....	*	Fever H.:		St. Thomas' H.:	
M. 21, { grey hepatization of right lung (p.m.)—symptoms. ....	nearly 4 months	M. 24, { fever. ....	*	F. 42, { hæmaturia. ....	15 months
F. 25, { inflammation of the brain. ....	*	M. 24, { ulceration of ilium. ....	*	M. 21, pneumonia. ....	13 days after bathing.
F. 25, { congestion of the lungs. ....	15 days	M. 24, { in hospital 14 hours (post mort.). ....	*	Dreadnought H.:	
Westminster H.:		Small Pox H.:		M. 30, { pneumonia of right lung. ....	5 days
F. 50, dropsy. ....	*	M. 28, small pox, natural—followed by sloughing abscess of knee. ....	*	M. 30, { consolidation of upper and middle lobes. ....	*
F. 26, peritonitis. ....	2 days	M. 22, small pox, natural, confluent. ....	*	M. 21, { abscess forming in the centre of upper lobe (post mort.). ....	*
Charing Cross H.—(No deaths registered.)		King's College H.:		M. 21, { intoxication during convalescence from fever. ....	7 days
Middlesex H.:		M. 21 days, { pleurisy in rheumatic fever. ....	10 days	M. 21, { inflammation of the mucous membranes generally (post mort.). ....	*
M. 48, apoplexy. ....	30 hours	F. 40, Bright's kidney—dropsy. ....	6 months		
		Bartholomew's H.:		The returns from Guy's Hospital are omitted for the present.	
		M. 45, hæmorrhage supposed to have arisen from diseased liver. ....	5 months		
		M. 49, chronic inflammation of the bladder. ....	*		
		M. 56, delirium from sloughing of the cellular tissue of the leg. ....	*		
		M. 38, dropsy. ....	*		
		F. 35, hydrothorax—diseased lungs. ....	*		

## DEATHS BY SMALL POX, TYPHUS, ETC., SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

duration	Small Pox.—See Small Pox Hospital.	duration	Other cases of Fever, not assigned to Typhus in abstract:—	duration	Hernia:—
F. 43, typhus fever. ....	22 days	M. 6, { remittent fever. ....	several weeks	M. 70, hernia—operation (in Guy's Hospital). ....	*
F. 2, { fever. ....	16 days	M. 47, { convulsions. ....	12 hours	F. 43, { hernia strangulated. ....	12 hours
M. 2, { arachnitis. ....	3 days	M. 47, { rheumatic fever. ....	7 days	F. 40, { inflammation of the bowels. ....	*
F. 42, typhus fever. ....	1 day	M. 60, { metastasis to the brain. ....	3 days	F. 56, { strangulation internally of intestines. ....	*
M. 36, { bilious fever. ....	3 days	F. 39, { rheumatic fever. ....	10 days	F. 56, { irreducible umbilical hernia. ....	20 days
M. 36, { congestion of brain. ....	6 weeks	F. 39, { hæmorrhage into the pericardium. ....	8 days	F. 56, { very large intestine twisted (post mort.). ....	4 days
F. 35, { cerebral irritation. ....	8 days	M. 59, diseased kidney, with fever. ....	10 days	Diabetes:—	
F. 35, { typhus gravior. ....	3 weeks	Syphilis:—		M. 55, { diabetes. ....	18 months
F. 7, { bilious remittent fever. ....	21 days	F. 1, seven- { syphilis—months' child { secondary symptoms (p.m.). ....	7 days	M. 55, { erysipelas. ....	17 days
M. 49, hepatic inflammation—typhus gravior. ....	7 weeks	M. under 1, lepra syphilitica. ....	13 weeks	Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.	
F. 46, fever—abdominal complication. ....	*	F. 3 weeks, syphilis—born a month before its time, and covered by a syphilitic eruption, when born, which gradually spread to the lungs, throat, and anus, when it died of debility consequent thereon. ....	*	F. 28, { confinement. ....	13 days
F. 75, typhus fever. ....	10 days	F. 1 mon., syphilis. ....	3 weeks	F. 30, { puerperal mania. ....	7 days
M. 36, typhus fever. ....	7 days	F. 40, syphilis—cachexia. ....	*	F. 30, { cold and inflammation, caused by incautiously leaving home 18 days after childbirth. ....	*
M. 22, fever and jaundice. ....	*	M. 3 mon., secondary syphilis. ....	*	F. 19, puerperal peritonitis. ....	14 days
M. 12, fever. ....	*	M. 3 mon., syphilitic periastris—debility. ....	from birth	F. 25, puerperal convulsions. ....	*
M. 15 wks., fever (seen by medical attendant only one day before death). ....	*	F. 27, syphilis. ....	2 years	See above.	
M. 60, typhus. ....	5 days	Hæmorrhage:—		Delirium tremens:—	
M. 14, typhus fever. ....	4 days	See above.		M. 40, delirium tremens. ....	3 days
M. 13, fever—effusion on the brain. ....	10 days	Malformation:—		M. 35, delirium tremens. ....	*
M. 33, typhus fever. ....	3 weeks	M. 6 days, malformation of the abdominal viscera (post mort.). ....	*	See above.	
M. 29, { typhoid fever. ....	8 weeks	F. 18 days, malformation of the heart. ....	*	Intemperance:—	
M. 44, fever. ....	21 days	F. 4 days, malformation—cyanosis (post mort.). ....	3 days	See above.	
M. 31, { fever. ....	3 weeks	M. 5 days, cyanosis. ....	*	Other causes:—	
M. 6 mon., mesenteric fever—convulsions. ....	*			M. 6 { phlegmonous erysipelas of face and scalp. ....	7 days
M. 7, otitis—irritative fever. ....	3 weeks			M. 6 mon., { aggravated by imperfect ventilation and cleansing. ....	*
M. 23, synochus, with abdominal affection. ....	*			F. 62, { cirrhosis. ....	6 months
M. 10, fever. ....	*			F. 62, { fever with diarrhoea. ....	5 weeks
M. 30, fever. ....	*				
(See above.)					

## RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

duration		duration		duration	
M. 18, malignant tumor in the throat. ....	6 months	F. 46, { dysentery. ....	19 days	F. 50, granular kidneys—anasarca. ....	*
M. 67, apoplexy—copious effusion into both lateral ventricles, and extensive destruction of the right hemisphere. ....	*	M. 25, { enteritis. ....	10 days	M. 32, morbus cordis. ....	*
M. 2, diarrhoea. ....	10 days	M. 27, { tubercles in lungs—vomica. ....	110 days	M. 5 mon., { intussusception. ....	5 days
M. 10, encephaloid cancer of mesenteric glands, liver, pancreas, uterus, and lungs. ....	15 months	M. 37, { hæmoptysis. ....	55 days	F. 34, hypertrophy (of heart?) and diseased bladder. ....	*
M. 19, { otitis. ....	2 weeks	F. 54, { ovarian tumour. ....	12 years	M. 32, abscess in the brain—apoplexy. ....	*
M. 19, { abscess of the brain. ....	1 week	F. 54, { tuberculated accretion of the peritæum. ....	5 weeks	F. 55, sudden death—extensive disease in all the abdominal viscera. ....	*
		F. 7 wks., { ascites. ....	2 weeks		
		F. 7 wks., { congestion of the brain. ....	several days

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive, and tension moderately strong at each examination. At 2h. 30m. p.m. there was a thunder storm, but there was no person present at the time.	See General Remarks.	The sky was cloudless till 1h. p.m.; from this time till 4h. 30m. it was generally overcast; cloudless afterwards till midnight. The prevailing clouds were cumuli, cirri, and scud. Rain was falling heavily from 3h. 30m. to 3h. 50m. p.m., accompanied with several claps of thunder.
MON.	Positive and moderately active at 4h. and 6h. p.m.; at other times during the day occasionally positive and negative, with weak tension. At 1h. 30m. a.m. and at 9h. a.m. the electricity was active; galvanic currents and sparks were shown; during this time the electricity was negative.	See General Remarks. Rain falling.	The amount of cloud was variable till 5h. a.m.; afterwards the sky became overcast till 7h. a.m.; about three-fourths were covered till 1h. 30m. p.m.; overcast afterwards till midnight. The prevailing clouds were cirrostratus and scud. Rain was falling at 2h. a.m., at 5h. a.m., at noon, and frequently during the evening. During the afternoon and evening the wind was blowing in frequent gusts of 3 and 4 lbs. pressure on the square foot. The magnets were disturbed at noon.
TUES.	Very slightly positive till 4h. a.m.; afterwards nothing was shewn till 5h. p.m., when it became positive, with moderately strong tension; afterwards slightly positive till midnight. At 11h. a.m. strong negative electricity was shown; there were galvanic currents, and sparks were frequent.	See General Remarks. Rain falling.	The sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. Rain was falling at 1h. 30m. a.m. From 6h. to 7h. a.m. the wind was blowing in frequent gusts of 2 lbs. pressure on the square foot.
WED.	Positive throughout the day; the tension was occasionally very weak—the max. occurred about midnight, the tension at the time was not strong.	See General Remarks.	With the exception of a few breaks towards the S., which occurred at 2h. a.m., the sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. A shower of rain fell at noon, and a slight rain was falling at intervals from 9h. 30m. p.m. till midnight.
THURS.	Positive throughout the day, occasionally very weak; the max. occurred at noon.	See General Remarks.	The clouds were slightly broken in the zenith at noon, and in the west at 6h. p.m.; with these exceptions the sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. A thin rain was falling, at intervals, between 6h. and 9h. a.m., at 2h. p.m., and at 10h. 10m. p.m.; and continued from the latter time till midnight. At 6h. 15m. an inverted arc of a solar halo was observed, whose distance from the sun was 22 degrees; also two mock suns were seen, but no measures could be taken, as they disappeared in a short time.
FRID.	Slightly positive till 9h. a.m., when rain began to fall very heavily, and continued till 10h. 10m. a.m.; the electricity was negative and active, with frequent galvanic currents, and sparks were in abundance. At 2h. 30m. p.m. a flash of lightning was seen, which was followed by thunder 9s. afterwards. Heavy rain began to fall, and continued falling till 3h. p.m., during which time the electricity was strongly negative, with galvanic currents, and there were sparks in abundance; the electrical instruments were unaffected afterwards during the remainder of the day.	See General Remarks.	The sky was generally overcast till noon; from this time till 7h. 30m. p.m. about three-fourths were covered; afterwards cloudless till midnight. The prevailing clouds were cirrostratus, cumulo-stratus, and scud. At 9h. a.m. rain commenced falling, and continued till 10h. 10m. p.m., occasionally descending in torrents; and again from 2h. 30m. to 3h. p.m., accompanied with peals of distant thunder.
SAT.	Positive throughout the day, except at 9h. a.m., when it was slightly negative. The tension was occasionally very weak; the max. occurred about midnight.	See General Remarks.	Cloudless till 4h. a.m.; about three-fourths of the sky were covered till 2h. p.m.; with the exception of a few breaks of small extent, overcast from 2h. p.m. till midnight. The prevailing clouds were cirrostratus, scud, and fleecy clouds. A thin fog prevailed at 3h. 30m. a.m., and at midnight. The magnets were disturbed at 1h. 30m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 a.m., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry. Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been out of order during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 53°3; and the mean reading at 7h. 30m. p.m., was 62°3; the mean readings at the Royal Observatory for the same times were 56°9 and 61°2 respectively.

† The mean direction of the wind for the first five days was S.W., and for the last two, N.N.W.

## A TABLE OF

## Births and Deaths registered in the Metropolis,

During the Week ending Saturday, July 18th, 1846.

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 28, (ending Saturday, July 11th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk(\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):	duration	Drowning (continued):—	duration
Labourer, 36, fracture of arms and legs, and other injuries, by falling 40 feet from a scaffold, when at work at a building (the New Houses of Parliament) .....	instant	F. 76, fracture of the neck of the thigh bone (no inquest) .....	10 days	M. about 17, supposed to be an apprentice belonging to the brig "Brothers," of South Shields, drowned in the River Thames—no proof how—supposed to have fallen from a coal barge when swinging with the tide.	
In Bartholomew's Hospital, labourer, 46, dislocation of the vertebrae of his neck, by falling down whilst getting off a hay-rick at Wimbledon (post mort.) .....	48 hours	Wounds:—		A man unknown, about 21, drowned in the River Thames—no proof by what means—no marks of violence. ....	under water 8 or 10 days
In Bartholomew's Hospital, painter, 32, rupture of his stomach by falling from a scaffold whilst painting a house at Bank Buildings (post mort.) .....	10 hours	In Bartholomew's Hospital, brass caster, 37, cutting his throat with a knife in temporary insanity (at Lamb's passage, Chiswell street) 6 days		Burns:—	
In University College Hospital, porter, 19, injuries of the belly from being crushed between two truck buffers on the Birmingham Railway, while standing there at work .....	*	Drowning:—		In University College Hospital, F. servant, about 60, burns from her clothes taking fire from a spark of wood shooting from the grate, while making coffee .....	3 days
		Scavenger, 32, drowned when bathing in the Serpentine River .....	about 15 hours	In Bartholomew's Hospital, son of a tool edge grinder, 2, burnt by his clothes taking fire, whilst playing with some lucifer matches at York street, Turnmill street .....	6 hours
		M. about 60 (independent), suicide by drowning—state of mind at the time not known.		Poison:—	
		Son of a tripe-seller, 9, drowned by accidentally falling into the River Thames from a barge .....	under water 10 minutes	F. 28, suicide by oxalic acid—insane .....	*
		A man, unknown, supposed 40, drowned in the River Thames—no proof by what means—no marks of violence ..	under water about 10 days		

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
F. 41, uterine hæmorrhage previous to and after parturition; and sloughing at the neck of the womb from natural pressure during the birth .....	*	F. from 66 to 69, natural death from apoplexy 10 min.		M. 35, natural death from apoplexy .....	18 hours
		F. 78, natural death—supposed from disease of the heart (instant) .....	*	M. 62, natural death—supposed from disease of the heart (instant) .....	*
		M. 45, apoplexy, brought on by intemperance 14 hours			

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration		duration
M. 64, natural .....	*	F. 64, natural .....	*	F. 5 mon., natural death in bed by the mother's side .....	sudden
M. 62, natural causes .....	*				

### TWELVE HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:—	duration	University College H.:—	duration	Bartholomew's H.:—No deaths (except from violence) registered.	
M. 46, strangulated hernia .....	*	{ tubercles in lungs—tubercles in mesen- teric glands .....	6 months	London H.:—	duration
F. 18, phthisis pulmonalis with delirium .....	stated to be of 2 months' duration, but uncertain	{ ulcerated intestines .....	1 year	M. 22, spinal apoplexy .....	1 year
Westminster H.:—		F. 48, { ovarian tumour .....	10 days	F. 19, diseased bladder .....	*
M. 48, phthisis pulmonalis .....	6 months	F. 26, scarlatina anginosa .....	6 days	St. Thomas' H.:—	
F. 46, febris .....	14 days	Fever H.:—No deaths registered.		M. 28, { rheumatism .....	6 months
F. 12, tubercular peritonitis .....	4 weeks	Small Pox H.:—		{ terminating with fever .....	1 week
M. 26, phthisis pulmonalis .....	*	F. 9, small pox, natural, confluent .....	24 days	M. 45, { behind the bladder .....	
Charing Cross H.:—(No deaths registered.)		King's College H.:—		{ abscess in liver; had been ill. ....	about 12 wks.
Middlesex H.:—		{ disease of the hip-joint .....	4 months	M. 26, phthisis .....	10 months
F. 38, hydrops pericardii .....	*	M. 30, { hectic fever ensued and caused death, (post mort.) .....		F. 11, ulceration of the hip-joint with consecutive abscess .....	*
Another death registered, but cause not yet ascertained.		F. 34, diseased heart—jaundice and bronchitis ..	*	Dreadnought H.:—No deaths registered.	
				The returns from Guy's Hospital are omitted for the present.	

## DISTRICTS OF EAST LONDON, WEST LONDON, CITY OF LONDON, AND SHOREDITCH:—

CAUSES OF DEATH AS RETURNED BY THE MEDICAL PRACTITIONERS CHIEFLY OF THESE DISTRICTS.

St. Botolph:—	duration	City of London, N.E. Dis. (continued):—	duration	Holywell & Moorfields:—	duration
M. 8 wks., consumption	5 days	F. 49, { bronchitis	5 days	M. 4 mon., { enteritis	4 days
M. 3 mon., { diarrhoea	12 weeks	F. 1, pneumonia	11 days	M. 2 mon., { convulsions	1 day
M. 4, { convulsions	12 weeks	F. 1, pulmonary consumption	3 months	M. 2 mon., congenital debility	2 months
M. 1, { phthisis	6 months	F. 39, constipation	18 months	F. 3 mon., disease of the alimentary canal	5 weeks
M. 1, { hydrocephalus	6 months	City of London (North West District):—		F. 10 days, aphæ	*
M. 1, { fits	7 days	M. 7, { chronic pulmonary disease	*	F. 72, muco-enteritis	1 month
M. 11 mon., inflammation of bowels	10 days	M. 7, { scrofulous enlargement of the knee	*	F. 31, phthisis pulmonalis	10 months
M. 2, tabes mesenterica	*	M. 29, scarlet fever (caught from sleeping with his child)	4 days	F. 5 wks., muco-enteritis	1 week
F. 1, { disease of the mesentery and lungs	4 months	F. 11 mon., scarlet fever	10 days	St. Leonard's:—	
F. 91, dropsy	9 days	F. 33, fever	14 days	M. 5 mon., diarrhoea from dentition	3 weeks
F. 73, { obstruction of the bowels	1 month	City of London (South West District):—		M. 6 wks., pneumonitis	6 days
F. 73, { effusion into the abdominal cavity	2 months	M. 43, consumption (not certified)	*	M. 2, effusion of serum into the brain	3 weeks

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Positive and tension strong until 5h. p.m.; afterwards slightly positive till midnight.	See General Remarks.	About one-third of the sky was covered till noon; from this time until 7h. p.m. it was cloudless, and about one-third was afterwards covered till midnight. The prevailing clouds were cumuli.
MON.	Positive throughout the day; the tension was strong at each examination, except at midnight, when it was weak.	See General Remarks.	Cloudless till 3h. 30m. a.m.; occasionally a few clouds were scattered in various directions till 7h. p.m.; from this time till midnight about one-half of the sky was covered: the prevailing clouds were cirrostratus, cumulostrati, fleecy clouds, and scud.
TUES.	Slightly positive throughout the day; the max. occurred about midnight.	See General Remarks.	One half of the sky was covered till 3h. 30m. a.m.; from this time till 9h. a.m. it was nearly overcast; during the remainder of the day about one-third was covered, except at midnight, when the sky was cloudless. The prevailing clouds were cirrostratus, fleecy clouds, and scud. A few large drops of rain fell at 2h. a.m.
WED.	Positive and weak throughout the day; the maxima occurred about 1h. 30m. a.m., and at 7h. 30m. p.m.	See General Remarks.	Nearly cloudless till 7h. a.m.; overcast from this time till noon; afterwards till 7h. p.m. the amount of cloud was variable; then cloudless till midnight. The prevailing clouds were cumuli, cirrocumuli, cirri, and scud.
THURS.	Slightly positive at each examination, except at 7h. 20m. p.m., when it was slightly negative; occasionally nothing was shown. The maximum occurred about 5h. 30m. p.m.	See General Remarks.	Overcast throughout the day. The prevailing clouds were cirrostratus and scud; a thin rain was falling about 3h. 30m. a.m., 9h. a.m., and 7h. 20m. p.m. During the evening the wind was blowing in occasional gusts of 11lbs. pressure on the square foot.
FRI.	Positive and weak till 7h. 20m. a.m.; from this time till 3h. 30m. p.m. it was positive, with moderately strong tension; afterwards nothing was shown till near midnight, when it became slightly positive with weak tension.	See General Remarks.	Overcast till 1h. 30m. a.m.; from this time till 9h. a.m. three-fourths of the sky were covered; again overcast till 3h. 30m. p.m.; the amount was variable afterwards till near midnight, when it became cloudless. The prevailing clouds were cumuli, cumulostrati, and scud. During the evening the wind was blowing in frequent gusts of 2lbs. pressure on the square foot.
SAT.	Slightly positive throughout the day; the max. occurred at 7h. 30m. p.m.	See General Remarks.	Overcast till noon; from noon till 3h. 30m. p.m. about one-half of the sky was covered: it was again overcast till 5h. p.m.; the amount was variable afterwards till near midnight, when it became overcast. The prevailing clouds were cumuli, cirri, and scud. During the afternoon the wind was blowing with a pressure of 3lbs. to 4lbs. pressure on the square foot, with occasional gusts to 6, 7, 8, and 9lbs. pressure.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The maximum thermometer has been out of order during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 61°3; and the mean reading at 7h. 30m. P.M., was 67°4; the mean readings at the Royal Observatory for the same times were 60°6 and 66°2 respectively.

† The direction of the wind for the week is principally S.W.

# A TABLE OF

## Births and Deaths registered in the Metropolis,

*During the Week ending Saturday, July 25th, 1846.*

ANNUAL SERIES VII.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 29, (ending Saturday, July 18th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In King's College Hospital, wife of a card-maker, 45, erysipelas and shock of miscarriage, following wound of the head from a fall in Shire Lane, when intoxicated .....	4 days	In King's College Hospital, spinster, servant, 24, erysipelas following fracture of the skull—struck with a brick in Clement's Lane—no evidence whether it fell or was thrown ..	12 days	Son of a carman, 10, drowned by accidentally falling into the Surrey Canal Dock.	
M. 4, { dyspepsia—hydrocephalus .....	3 months	M. 18, accidentally drowned in the River Thames by falling off a barge .....	5 hours	Son of a shoemaker, 15, accidentally drowned whilst bathing in the River Thames at Woolwich.

Hackney Road:—		F. 38, { fatty tumour in the left orbit .....	10 days	St. John:—	
M. 14, { typhoid fever .....	7 days	F. 65, general decay .....	*	M. 2, inflammation of the intestines .....	5 days
M. 3 mon., whooping cough (not certified, no	4 days	F. 4 mon., mesenteric disease .....	*	M. 80 climacteric decay .....	*
medical attendant) .....	1 month				
M. 74, cholera, epidemic .....	4 days				

# THIRTEEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's H.:	duration	Bartholomew's H.:	duration	St. Thomas' H. (continued):	duration
M. 60, English cholera (post mort.)	45 hours	M. 23, consumption	*	M. 25, { insensible—no certain particulars, but said to have had delirium tremens, and to have been a great drunkard—fever typhoid—in hospital 9 days—no post mort. examination allowed.	
M. 53, disease of the lungs	*	M. 67, English cholera	8 days		
F. 66, diseased heart—hypertrophy—effusion into pleura, pericardium and peritoneum (post mort.), duration uncertain—symptoms said to have existed 7 months		M. 24, typhus fever	*		
Westminster H.:—No deaths registered.		M. 49, phthisis	*		
Charing Cross H.:		M. 39, chronic inflammation of the brain	*		
M. 40, chronic inflammation of the right lung, (post mort.) 3 years		M. 38, gangrene of the left leg	*		
Middlesex H.:—No deaths registered.		M. 31, pleuro-pneumonia	*		
University College H.:		M. 58, enlarged liver—anasarca	*		
M. 37, morbus cordis—anasarca—ascites	3 months	M. 40, tumor in pharynx	*		
M. 45, abscess of the kidney and in psoas muscle, discharged by lungs	*	F. 26, apoplexy	*		
Fever H.:		F. 40, ascites—œdema of lower extremities—urine albuminous	ill 3 years		
M. 10, { fever.	19 days	F. 13, phthisis	*		
{ congestion of brain—lymph and serum at the base of brain (post mort.), in hospital 12 days.		F. 47, cancer of the rectum and uterus	*		
Small Pox H.:—No deaths registered.		F. 12, mesenteric disease	*		
King's College H.:		London H.:			
M. 36, { erysipelas of the head.	4 weeks	M. 44, stricture	*		
{ the disease relapsed and caused death, in about 10 days		St. Thomas' H.:			
		F. 42, { bronchitis chronica	8 months		
		{ pneumonia acute	5 days		
		M. 48, { typhus—diarrhoea, said to have been ill 1 month in hospital only 5 days (post mort. exam. not allowed).			
		M. 76, { œdema of both lungs, and anasarca.	4 weeks		
		{ hæmaturia (post mort.)	3 days		

## DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, SYPHILIS, MALFORMATION, HERNIA, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, ETC.

DAY	ELECTRICITY	Circumstances accompanying the exhibition of Electricity	GENERAL REMARKS
SUN.	Slightly positive at each examination.	See General Remarks.	The amount of cloud was constantly varying throughout the day. About noon large cumulostrati and cumuli covered the sky. The prevailing clouds were cirri, cumulostrati, cumuli, and scud. The wind was blowing in occasional gusts of 2 and 3 lbs. pressure on the square foot during the morning.
MON.	Nothing was shewn until 6h. a.m.; slightly positive from that time to 2h. p.m. Positive and tension strong during the rest of the day.	See General Remarks.	The sky was overcast till 6h. a.m., and about seven-tenths were covered with cumuli, fleecy clouds, and cirrostratus, from that time till 8h. p.m.; nearly cloudless afterwards till midnight.
TUES.	Positive and tension strong at 8h. a.m., 4h. p.m., and about midnight. Nothing was shewn at any other times.	See General Remarks.	With the exception of a few breaks about 4h. p.m. the sky was overcast throughout the day.
WED.	Positive but very weak till noon: positive and tension strong during the remainder of the day.	See General Remarks.	The sky was covered with cirrostratus till about 6h. a.m., and about two-thirds were covered during the remainder of the day.
THURS.	Positive and tension occasionally strong till 2h. p.m. Slightly positive during the rest of the day.	See General Remarks.	Overcast till 11h. a.m., from which time till about noon six-tenths were covered with cirrostratus and cumuli; it then became cloudless, and continued so during the rest of the day.
FRID.	Nothing shewn till 6h. a.m.; positive and tension strong from that time till noon. Negative and very active from 1h. p.m. to 6h. p.m. Positive and tension strong from 7h. p.m. till midnight.	See General Remarks. Rain falling. See General Remarks.	Cirrostratus and fleecy clouds covered about six-tenths of the sky till 7h. 30m. a.m., when it became overcast, and continued so during the remainder of the day. Rain was falling without interruption from 1h. p.m. to 6h. p.m.
SAT.	Positive but tension very variable till 6h. a.m. Positive and very active during the rest of the day.	See General Remarks.	The sky became clear at 3h. a.m., and continued so till about 9h. a.m., from which time till 2h. p.m. loose cumuli and scud were scattered in various directions; about six-tenths were then covered till 7h. p.m., and nearly cloudless from that time till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken every two hours, day and night.

The readings of the two self-registering thermometers, the one placed in the *full rays of the sun*, and the other placed on *grass* fully exposed to the sky, are taken every morning at 9 A.M., and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. The readings of the thermometer placed in the *full rays of the sun* was inadvertently omitted on the 22d, 9h. A.M.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10 A.M., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day, which precedes that on which the anemometer is read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

\* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 60.7; and the mean reading at 7h. 30m. P.M., was 64.5; the mean readings at the Royal Observatory for the same times were 59.7 and 63.2 respectively.

† The direction of the wind for the week is principally S.W.

*During the Week ending Saturday, August 1st, 1846.*

## EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 30, (ending Saturday, July 25th).

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness. The entries marked with an asterisk (\*) are defective, the Coroners, Medical Officers of Hospitals, or private Practitioners having failed to ascertain or state the time in which the diseases or injuries proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

### CORONERS' RETURNS OF DEATHS BY VIOLENCE.

NOTE.—The cases of violence not returned by the Coroner, have after them "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Innervation:—	duration
Widow of a labourer, 92, mortification arising from the fracture of the left thigh by an accidental fall	10 weeks	M. 49, injuries to the head from being accidentally crushed	*	M. 15, { rheumatism (from immersion in water) 3 weeks abscess on dorsum of foot, elbow joint, and shoulder joint (no inquest).	
In St. Thomas's Hospital, carpenter, 44, internal hæmorrhage from fracture of the ribs, by the accidental fall of several floors in the Map Office of the Tower of London, while undergoing repairs	4 days	(The circumstances of the accident should have been stated)		<b>Hanging and Suffocation:—</b>	
M. 10, injuries of the head from pulling down on it some flat paving stones, standing on end in the street, whilst he was at play	instant	M. 59, fracture of the ribs—typhus fever	*	Wife of a patent wig maker, 55, hanged herself with a rope to a bedpost—found hanged—suicide—three previous attempts to commit suicide.	
In St. George's Hospital, labourer, 26, collapse after a fall from a horse—supposed fracture of base of skull (no inquest)	*	(no inquest—an imperfect return.)		F. 8 mon., suffocation—no marks of violence, how produced unknown.	
In St. Thomas's Hospital, horsekeeper at a brewery, 35, fracture of the cranium and forehead, by two punches accidentally falling upon him out of a wagon	*	F. 80, concussion of the brain (no inquest—an imperfect return.)	*	<b>Burns:—</b>	
In St. Thomas's Hospital, formerly a fringe-maker, but out of business, 78, fracture of the clavicle from being accidentally knocked down by a post chaise in Kennington Lane (post mort.)	4 days	M. 5 mon., fractured arm—succeeded by mortification—being overlaid accidentally	*	In Bartholomew's Hospital, accountant, 24, burnt at a fire at No. 76, Newgate Street, (how the fire originated no evidence.)	*
M. 67, { fracture of thigh..... 6 months delirium tremens and hæmatemesis. 1 week (no inquest—how was the fracture caused?)		<b>Wounds:—</b>		In Bartholomew's Hospital, domestic servant, 15, accidentally burnt by a spark flying out of the fire, and catching her clothes	4 days
M. 39, injuries from being accidentally crushed on the head by an engine	*	In Guy's Hospital, son of a baker, 12, lock jaw from an injury to the great toe, by accidentally treading on a rusty nail	*	In Guy's Hospital, F. 9, accidentally burnt by her clothes taking fire while lifting a teakettle	24 hours
(What kind of engine and where?)		<b>Drowning:—</b>		<b>Poison:—</b>	
		Son of a coal porter, 8, found drowned, but how he came into the water no evidence [in the Thames.]		Surgeon, 26, poisoning with morphia, when or why taken unknown—insensible 5 hours before death insane for some months past (post mort.)	
		F. about 34 (occupation unknown), dressed as a servant, drowning—not known how she came into the water—supposed to be suicide—found dead in the Grand Junction Canal.		M. 3 mon., congestion of the brain during teething—in some degree caused by a small portion of opiate, mixed with the medicine administered	8 days
		Daughter of a painter, 1, suffocation—fell from her parents' bed into a pail of soap-suds—found dead in the pail (post mort.)			
		M. about 40, found dead in the River Thames.			

### CORONERS' RETURNS OF DEATHS BY DISEASE, IN WHICH THE CAUSES ARE ASSIGNED.

	duration		duration		duration
M. 58, fit of apoplexy—fell down stairs—died almost immediately		F. 4 mon., natural—convulsions	*	M. 14, { natural death from dropsy..... under medical treatment.....	about 2 weeks
F. 61, natural from disease of the heart	sudden	F. 5 wks., found dead in bed—supposed from convulsions.		M. 4 mon., natural death—supposed from diarrhoea	3 days
M. 6 mon., natural—diarrhoea	3 days	M. 54, natural—was seen alive and well 20 minutes previously—had had two apoplectic fits.		cause of death not discovered by post mort. examination.	
M. 24, { typhus fever..... not treated medically until 2 days before death (post mort.)		F. about 25, effusion into the chest—disease of the heart and lungs..... of long standing		F. 68, { natural—partly from synchus..... partly from old age and debility.	*
M. 6 wks., natural—exhaustion from common ebolera	*	fell and died in the street (post mort.)			

### CORONERS' RETURNS, IN WHICH, ALTHOUGH INQUESTS WERE HELD, IT DOES NOT APPEAR TO HAVE BEEN ASCERTAINED FROM WHAT DISEASES OR CAUSES THE PERSONS DIED.

	duration		duration
F. newly born, unknown—decomposition prevented the cause from being ascertainable—found dead in the Paddington Canal.		M. 6 mon., found dead—natural causes.	

### ELEVEN HOSPITALS.—CAUSES OF DEATHS AS RETURNED BY THE MEDICAL OFFICERS.

NOTE.—Under former heads are placed all deaths in hospitals on which inquests were held; also deaths in hospitals following injury, though inquests were not held.

St. George's II.—	duration	Middlesex II.—	duration	London II.—	duration
M. 27, acute rheumatism	*	M. 50, glanders	23 days	M. 40, pneumonia	3 months
M. 48, red and grey hepatization of right lung—adherent pleura (post mort.)	*	M. 46, dropsy	*	M. 49, phthisis—adherent pericardium—abscess of kidney (post mort.)	*
cedema of legs	*	F. 40, diseased bladder	*	F. 20, palpitation of the heart	*
M. 12, { acute rheumatism..... 14 year hypertrophy of heart—adherent pericardium—diseased mitral valve (p.m.)		F. 65, cancer uteri	3 years	<b>St. Thomas' II.—</b>	
F. 42, inflammation of the leg	*	F. 12, { diseased spine..... hydrocephalus.....		F. 14, hæmoptysis—phthisis	2 years
F. 27, inflammation and mortification of the legs	*	tubercles in cerebellum and pons Varoli (post mort.)	*	operation.....	*
<b>Westminster II.—No deaths registered.</b>		<b>University College II.—No deaths registered.</b>		M. 1, { peritonitis 10 days after operation..... inflammation of the membranes of the brain.....	
<b>Charing Cross II.—</b>		<b>Fever II.—</b>		<b>The Returns from Guy's Hospital are omitted for the present.</b>	
M. 62, { cirrhosis of the liver..... tubercles in the lungs, intestines, and mesenteric glands (post mort.)	2 or 3 years	M. 22, fever (in hospital 7 days)	*	<b>The Returns from the Dreadnought Hospital are not yet received, in consequence of a change of Registrar.</b>	
incipient phthisis pulmonalis	*	F. 16, fever (in hospital 5 days)	*		
M. 33, { hæmoptysis on three occasions, and the immediate cause of death—(post mort.)	2 or 3 months	<b>Small Pox II.—No deaths registered.</b>			
		<b>King's College H.—No deaths registered.</b>			
		<b>Bartholomew's II.—</b>			
		M. 58, pneumonia	10 days		
		M. 64, retention of urine—disease of the bladder	*		

DEATHS BY SMALL POX, DIARRHŒA, DYSENTERY, CHOLERA, SYPHILIS, HÆMORRHAGE, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, ETC.

Small Pox:—

duration

- M. 1, variola, confluent (without vaccination) 6 days  
 M. 1, { small pox 6 weeks  
 M. 1, { followed by fever (vaccinated when 6 months old, but it did not take well).  
 M. 5, variola (not stated whether vaccinated) 10 days

Diarrhœa:—

- F. 4 days, diarrhœa—convulsions \*  
 M. 5 weeks, diarrhœa 1 week  
 M. 88, diarrhœa 6 days  
 F. 6 weeks, diarrhœa 3 weeks  
 F. 2 mon., { diarrhœa 7 days  
 { aphtha 2 days  
 F. 6 mon., diarrhœa 5 days  
 M. under 1, diarrhœa \*  
 F. 9 mon., diarrhœa 6 weeks  
 M. 11 mon., diarrhœa 2 months  
 M. 1, { teething—diarrhœa about 2 weeks  
 { but has been ill since weaning.  
 M. 8 mon., diarrhœa 10 days  
 M. 3 mon., diarrhœa 4 days  
 F. 7 weeks, diarrhœa 24 hours  
 F. 1, diarrhœa—effusion on the brain 4 days  
 F. 40, diarrhœa 2 days  
 M. 3 mon., diarrhœa 4 days  
 F. 4, diarrhœa \*  
 M. 1 mon., diarrhœa \*  
 M. 5 mon., { enteritis mucosa. 24 hours  
 { diarrhœa 4 days  
 F. 60, { serous apoplexy 1 day  
 { diarrhœa 3 weeks  
 M. 6 mon., diarrhœa 1 day  
 M. 6 mon., diarrhœa 1 day  
 F. 67, biliary diarrhœa 2 days  
 F. 1, diarrhœa 12 days  
 F. 6 mon., diarrhœa—marasmus 1 week  
 M. 4 mon., bilious diarrhœa 3 weeks  
 F. 5 weeks, diarrhœa 4 days  
 M. 11 weeks, diarrhœa 6 days  
 M. 62, diarrhœa 8 days  
 M. 70, diarrhœa 3 weeks  
 M. 3 mon., { irritable condition of the stomach and bowels 3 weeks  
 { diarrhœa 2 weeks  
 M. 6 weeks, { convulsions 5 days  
 { diarrhœa 5 days  
 F. 6 mon., diarrhœa 5 days  
 F. 81, diarrhœa 5 days  
 F. 81, diarrhœa—ulcerated intestines \*  
 F. 84, diarrhœa 7 days  
 F. 79, diarrhœa 3 weeks  
 M. 3 mon., diarrhœa 3 weeks  
 F. 7 mon., diarrhœa 3 weeks  
 F. 1, { diarrhœa 21 days  
 { convulsions 12 hours  
 M. 5 mon., diarrhœa 3 weeks  
 F. 3 mon., diarrhœa 3 weeks  
 M. 5 mon., { diarrhœa 1 week  
 { convulsions 1 day  
 { pneumonia (post mort.) 1 day  
 M. 2, diarrhœa 9½ hours  
 F. 86, diarrhœa 10 days  
 M. 8 mon., { diarrhœa 3 weeks  
 { bronchitis 7 days  
 { pneumonia 3 days  
 M. 8 mon., { diarrhœa 3 or 4 days  
 { convulsions 1 day  
 M. 7 mon., bowel complaint \*  
 M. 7 mon., bowel complaint \*  
 F. 52, exhaustion from diarrhœa 6 days  
 F. 1, diarrhœa \*  
 F. 84, decay of nature—diarrhœa \*  
 M. 5 mon., diarrhœa 1 week  
 F. 9 mon., diarrhœa 3 weeks  
 M. 3 mon., diarrhœa 4 days  
 F. 7 mon., diarrhœa \*  
 F. 11 mon., diarrhœa 7 days  
 M. 16 days, diarrhœa some weeks  
 M. 10 mon., teething—diarrhœa 8 days  
 M. 54 diarrhœa 17 days  
 M. 9 mon., diarrhœa 10 days  
 M. 1, diarrhœa \*  
 M. 11 mon., diarrhœa and vomiting \*  
 F. 4 weeks, diarrhœa 10 days  
 F. 1, diarrhœa \*  
 F. 2 mon., diarrhœa \*  
 F. 11 mon., diarrhœa from teething death hastened by condition of deceased, who was one of seven persons living in a wretched hovel 9 feet square, by 5 ft. 6 in. high, accessible from the street by a descent of seven steps to the court, and two steps from the court to the room.—(district of St. James, Clerkenwell.)

Diarrhœa (continued):—

duration

- F. 10 weeks, diarrhœa \*  
 F. 8 mon., { dentition 4 days  
 { diarrhœa 3 days  
 F. 7 mon., diarrhœa—dentition 4 weeks  
 M. 14 days, diarrhœa 7 days  
 F. 11 mon., diarrhœa 7 days  
 M. 5 mon., diarrhœa 7 days  
 F. 6 weeks, diarrhœa from defective nutrition 7 days  
 M. 9 mon., diarrhœa 4 days  
 M. under 1, diarrhœa 7 days  
 M. under 1, diarrhœa 7 days  
 M. 1, diarrhœa 7 days  
 F. 7 mon., { diarrhœa 1 month  
 { convulsions 6 days  
 M. 8 mon., epidemic diarrhœa 2 days  
 F. 3 mon., diarrhœa 2 weeks  
 F. 1, diarrhœa 8 days  
 F. 1, diarrhœa with sickness 6 days  
 M. 5 weeks, diarrhœa 1 week  
 M. 3 mon., diarrhœa 8 days  
 M. 1, diarrhœa 1 week  
 F. 4 months, diarrhœa 6 days  
 F. 7 mon., { diarrhœa 1 day  
 { convulsions 5 weeks  
 M. 20, diarrhœa 5 days  
 M. 4 mon., diarrhœa 14 days  
 F. 6 mon., diarrhœa 2 days  
 M. 65, bronchitis and diarrhœa 7 days  
 F. 8 mon., diarrhœa \*  
 M. 5 mon., diarrhœa \*  
 M. 10 weeks, diarrhœa—aphtha \*  
 F. 1, diarrhœa 4 days  
 M. 5 mon., diarrhœa 2 weeks  
 F. 2 mon., diarrhœa 6 days  
 F. 5 mon., diarrhœa 4 days  
 M. 10 weeks, diarrhœa 5 days  
 F. 6 mon., diarrhœa—mucosa 16 days  
 M. 27, { diarrhœa 10 days  
 { effusion on the brain 1 month  
 F. 60, { diarrhœa 8 days  
 { typhoid 4 days  
 F. 4 mon., diarrhœa 4 days  
 M. under 1, diarrhœa from want of nourishment from the mother \*  
 M. under 1, diarrhœa and inward convulsions from teething \*  
 M. 27 days, { diarrhœa 18 days  
 { convulsions 4 days  
 F. 4 months, diarrhœa 14 days  
 F. 2, { fever and diarrhœa 4 hours  
 { convulsions 4 days  
 F. 10 days, diarrhœa 12 days  
 M. 8 mon., diarrhœa 4 days  
 F. 5 mon., diarrhœa 4 days  
 F. 6 weeks, diarrhœa 4 days  
 F. 11 mon., dentition—diarrhœa 4 days  
 F. 56, { diarrhœa 2 weeks  
 { fever 3 weeks  
 M. 14 weeks, diarrhœa 8 days  
 M. 2, diarrhœa—bronchitis 14 days  
 M. 7 mon., { diarrhœa 2 days  
 { pneumonia nearly 3 weeks  
 M. under 1, diarrhœa 3 months  
 F. under 1, diarrhœa 3 days  
 F. 1, diarrhœa 6 days  
 M. 10 mon., diarrhœa—hydrocephalus 2 days  
 F. 7 mon., { inflammation 7 days  
 { diarrhœa 3 weeks  
 F. 10 mon., diarrhœa 3 weeks  
 F. 46, diarrhœa 3 weeks  
 M. 3 mon., diarrhœa \*  
 M. 3 mon., diarrhœa \*  
 M. 58, diarrhœa—typhoid fever 2 days  
 F. 3 mon., diarrhœa \*  
 F. 73, chronic diarrhœa \*  
 F. 12 weeks, diarrhœa and thrush 3 weeks  
 F. 10 mon., { diarrhœa 7 days  
 { convulsions 1 day  
 M. 5 weeks, { diarrhœa 10 days  
 { marasmus 3 weeks  
 M. 11 weeks, thrush—diarrhœa 3 weeks  
 F. 10 weeks, thrush and relaxation of the bowels \*  
 M. 5 mon., { hydrocephalus 6 weeks  
 { diarrhœa 6 weeks

Other cases of diarrhœa not assigned to this disease in abstract.

- M. 2, { mesenteric disease 1 year  
 { diarrhœa 3 weeks  
 F. 7 mon., diarrhœa from mesenteric disease—never been healthy from birth.  
 F. 38, { disease of ankle-joint 2 years  
 { phthisis—diarrhœa 11 days  
 M. 62, { podagra 5 days  
 { diarrhœa 1 month  
 F. 3 mon., { thrush 9 days  
 { diarrhœa 9 days  
 F. 1 mon., marasmus and diarrhœa \*  
 M. 1, { hooping cough 1 month  
 { diarrhœa 7 days  
 F. 1, { pertussis 4 or 5 months  
 { diarrhœa 6 days  
 F. 28, { cancer mammae 9 months  
 { diarrhœa 29 days  
 M. 1 mon., jaundice, erysipelas, and diarrhœa 29 days  
 M. under 1, { aphtha 7 days  
 { diarrhœa 1 day

Other cases of Diarrhœa (continued):—

duration

- F. 41, { paralysis 10 days  
 { diarrhœa 4 months  
 M. 2, { atrophy 14 days  
 { diarrhœa 13 days  
 { bronchitis and dentition 7 days  
 M. under 1, { pneumonia 4 days  
 { diarrhœa 6 hours  
 { convulsions 19 days  
 M. 2 mon., { hooping cough 36 hours  
 { diarrhœa \*  
 Dysentery:—  
 F. 50, dysentery 6 days  
 F. 56, dysentery 3 weeks  
 F. 7 weeks, dysentery 10 days  
 F. 64, dysentery—ulceration of the intestines \*  
 M. 43, hæmorrhage of the bowels \*  
 Cholera:—  
 M. 53, cholera Asiatic \*  
 M. 49, malignant cholera 24 hours  
 F. 28, malignant cholera 3 days  
 F. 28, spasmodic cholera \*  
 M. 42, cholera \*  
 M. 69, cholera 5 days  
 M. 9 weeks, bilious cholera 3 days  
 F. 40, cholera 3 days  
 F. 43, cholera 5 days  
 F. 5 mon., English cholera \*  
 F. 6 weeks, { cholera 9 days  
 { convulsions 6 days  
 M. 44, { cholera 5 days  
 { consecutive fever 3 days  
 F. 76, English cholera 3 days  
 M. 80, cholera 5 days  
 M. 74, cholera 48 hours  
 F. 4 mon., cholera infantum 1 day  
 F. 40, cholera 9 days  
 F. 3 mon., cholera—debility 5 days  
 M. 80, cholera 2 days  
 F. 3 mon., cholera 7 days  
 F. 70, cholera morbus 3 days  
 F. 48, cholera 24 hours  
 F. 7 mon., { cholera several days  
 { effusion on the ventricles of the brain 4 or 5 days  
 F. 3 mon., cholera infantum 3 days  
 M. 70, cholera 4 days  
 F. 1 cholera infantum 9 days

(See Inquests.)

Syphilis:—

- M. 6 wks., syphilis from birth  
 M. under 1, syphilis \*

Hæmorrhage:—

- M. 3 wks., weakness by loss of blood from the navel 2 weeks  
 F. 59, epistaxis—internal hæmorrhage 7 days

Malformation:—

- M. 4 days, cyanosis (post mort.) 30 hours

Hernia:—

- F. 56, old umbilical hernia, strangulated 8 days

Diabetes:—

- In Guy's Hospital, F. 47, diabetes—inflammation of the brain \*  
 M. 38, { diabetes 1 year  
 { hæmoptysis 1 day

Stone:—

- In Guy's Hospital, M. 75, stone in the bladder \*  
 M. 72, stone in the bladder (post mort.) many years  
 See St. Thomas's Hospital.

Childbirth:—The time elapsing from commencement of labour to death should invariably be returned.

- F. 27, { childbirth 38 hours  
 { puerperal peritonitis (post mort.) 20 hours  
 F. 37, { childbirth \*  
 { hæmorrhage 12 days before delivery.  
 F. 31, { abortion 1 week  
 { peritonitis and inflammation of knee joint 1 week  
 F. 26, { abortion 7 years  
 { diarrhœa and collapse 2 days

Other cases not enumerated under Childbirth in abstract.

- { disease of liver and kidneys—impacted gallstones \*  
 F. 41, { childbirth 3 weeks  
 { vomiting, diarrhœa, and jaundice (p.m.) 17 days  
 { phthisis pulmonalis 6 months  
 F. 33, { typhus fever 1 week  
 { miscarriage at 3 months.

Delirium tremens:—

- F. 35, delirium tremens 11 days  
 M. 52, delirium tremens \*  
 M. 49, delirium tremens—pleuro-pneumonia \*  
 M. 33, delirium tremens 3 weeks  
 M. 33, delirium tremens 7 days  
 M. 43, delirium tremens 1 month  
 M. 42, delirium tremens 5 days  
 M. 59, { chronic inflammation of the brain 4 years  
 { delirium tremens 2 days  
 (assigned to cephalitis in abstract.)

Other causes:—

- { psoas abscess 15 or 16 months  
 F. 45, { with ulceration into the colon—feces discharged from the external opening in the right groin. 21 hours  
 (This return is defective. It contains no statement of the cause of fright, or of the disease which terminated in death.)

M. 6 mon., hydropathy 3 days

OTHER CASES WHICH ARE DISTINGUISHED ABOVE.

- F. 12, meningitis 4 days  
 M. 1 mon., diseased liver—ulceration of small intestines 3 weeks  
 { ilium perforated in two places.  
 M. 27, { peritonitis 4 days  
 { ulceration of the bowels.  
 M. 48, inflammation of the stomach and bowels \*  
 F. 63, malignant ulceration of bladder \*  
 F. 79, hydrothorax (sudden death) \*

RETURNS AFTER POST MORTEM EXAMINATION, IN ADDITION TO THOSE WHICH ARE DISTINGUISHED ABOVE.

- F. 5, { meningitis 12 days  
 { membranes of brain much inflamed—vessels gorged with blood.  
 M. 2, { tubercles mesentericæ 4 months  
 { tuberculated lungs. 1 month  
 { diseased mesenteric glands.  
 M. 4, { granular disease of kidneys above 2 years  
 { chronic peritonitis—strumous.

- M. 75, { pleuro-pneumonia 5 days  
 { latent pericarditis.  
 F. 9, typhoid pneumonia 3 days  
 M. 65, typhoid pneumonia 5 days  
 F. 11, peritonitis 42 hours  
 { abscess of uterus 1 year  
 F. 28, { granular disease of kidney 3 months  
 { suppression of urine 4 days  
 { effusion into ventricles of the brain 36 hours
